March 9, 2015

Chairman and Members, Board of Directors
Florida Governmental Utility Authority
1500 Mahan Drive, Suite 250
Tallahassee, FL 32308

Florida State law requires that all units of local government publish a complete set of financial statements presented in conformity with generally accepted accounting principles (GAAP) and audited in accordance with generally accepted auditing standards by a firm of licensed certified public accountants. Pursuant to that requirement, the Comprehensive Annual Financial Report of the Florida Governmental Utility Authority (FGUA) for the fiscal year ended September 30, 2014 is hereby submitted. Responsibility for both the accuracy of the data and the completeness and fairness of the presentation, including all disclosures, rests with the management of the FGUA. To the best of our knowledge and belief, the enclosed data is accurate in all material respects and is reported in a manner designed to present fairly the financial position and results of operations of the FGUA. All disclosures necessary to enable the reader to gain an understanding of the FGUA's financial activities have been included.

The Florida Governmental Utility Authority's financial statements have been audited by James Moore & Co. P.L., a firm of licensed certified public accountants. The goal of the independent audit was to provide reasonable assurance that the financial statements of the Florida Governmental Utility Authority for the fiscal year ended September 30, 2014, are free of material misstatement. The independent audit involved examining on a test basis, evidence supporting the amounts and disclosures in the financial statements; assessing the accounting principles used and significant estimates made by management; and evaluating the overall financial statement presentation. The independent auditor concluded, based on the audit, that there was a reasonable basis for rendering an unqualified ("clean") opinion that the Florida Governmental Utility Authority's financial statements for the Fiscal Year ended September 30, 2014, are fairly presented in conformance with GAAP. The independent auditor's report is presented as the first component of the financial section of this report.

GAAP requires that management provide a narrative introduction, overview, and analysis to accompany the basic financial statements in the form of Management's Discussion and Analysis (MD&A). This letter of transmittal is designed to complement the MD&A and should be read in conjunction with it.

The Florida Governmental Utility Authority's MD&A can be found immediately following the report of the independent auditors.

FGUA Board of Directors
LEA ANN THOMAS, Chair, Polk County / DOUG MEURER, P.E., Lee County / KEN CHEEK, P.E., Citrus County
SHANE PARKER, P.E., Hendry County / BRUCE KENNEDY, P.E., Pasco County / MICHAEL VUOLO, DeSoto County /
FLIP MELLINGER, Marion County

Profile of the Government

The FGUA exists as a legal entity and public body pursuant to Chapters 125, 163 and 166, Florida Statutes, and a First Amended and Restated Interlocal Agreement dated as of December 1, 2000, as restated, amended and supplemented from time to time (the "Interlocal Agreement") by and among Citrus County, Nassau County, Polk County and Sarasota County, each a local government located in the State of Florida. Sarasota County and Nassau County have since terminated their membership in the Authority. Osceola County joined as a member in 2003 and has since terminated its membership in the Authority. Lee County joined as a member on October 18, 2005, Pasco County joined as a Member on February 27, 2008, Hendry County joined as a member on February 21, 2008, Desoto County joined as a member on February 19, 2009 and Marion County joined as a Member on November 21, 2013. The Town of Dundee joined as a member on June 12, 2007 and has since terminated membership in the Authority. Citrus County, Desoto County, Hendry County, Lee County, Pasco County, Polk County and Marion County are the current counties who are Members in the FGUA. The purpose of the FGUA is to enable its members to make the most efficient use of their common power to acquire, own, improve, operate, and maintain water and wastewater facilities; however, Authority membership is not a prerequisite to the acquisition of property within any particular jurisdiction.

The FGUA does not have any employees. All services are provided on a contractual basis predicated on the management and operational needs of the FGUA. Overall management (including executive oversight, administration, financial management, capital planning, and construction contract supervision) is provided by Government Services Group, Inc. Daily operations, maintenance, customer service, and billing services are provided by US Water/Wade Trim, with exception of services at MacDill AFB Utility System which are provided by US Water Services Corporation.

The FGUA began its operational and fiscal activities on the date of acquisition of five water and wastewater systems on April 15, 1999. These systems were acquired from Florida Cities Water Company and Poinciana Utilities, Inc., units of Avatar Properties, Inc. A sixth system located in Lee County was part of the acquisition discussions, but was directly purchased by Lee County on April 15, 1999. The Barefoot Bay Utility System was transferred to Brevard County in February 2000. The Sarasota Utility System was transferred to Sarasota County on August 8, 2002. On December 5, 2003, the FGUA completed the purchase of two additional utility systems from Florida Water Services Corporation, the Citrus County Utility System and the Lehigh Acres Utility System (Lee County). On March 31, 2004, the FGUA sold its Carrollwood Utility System water production wells to the Tampa Bay Water Authority and its water distribution system and wastewater collection system to Hillsborough County, ending its ownership in the Carrollwood Utility System. Continuing with the FGUA's purpose to transition utility activities from the private sector to public ownership and operation, the Citrus Utility System was transitioned to Citrus County on February 15, 2007. Shortly thereafter, on April 30, 2007, the Poinciana Utility System was transitioned to the Tohopekaliga Water Authority. On February 27, 2009 the FGUA purchased the Aloha Utilities Inc. water and wastewater systems (Aloha Gardens and Seven Springs), collectively called the FGUA Pasco Utility Systems. On December 23, 2009 the FGUA acquired the Consolidated Utility Systems. On March 10, 2010 the FGUA acquired the Lindrick Utility System and on July 29, 2010 the FGUA acquired the North Fort Myers Utility System. On June 17, 2010, the Authority accepted and approved a contract with the United States Government for the acquisition of the water and wastewater utility facilities at MacDill Air Force Base (AFB). The effective date of this acquisition was March 1, 2011 after the transition period which ended February 28, 2011. On June 28, 2012 the FGUA acquired the Mad Hatter and Paradise Lakes Utility Systems, collectively; the Mad Hatter System has been combined into the Consolidated Utility Systems. On March 28, 2013 the FGUA

acquired certain water and wastewater utility assets owned by Aqua Utilities Florida, Inc. and Crystal River Utilities, Inc. located in Pasco, Lake, Alachua, Citrus, Hardee, Lee, Marion, Orange, Polk, Seminole, Volusia and Putnam Counties, Florida. These system were separated into three separate enterprise funds; Pasco Aqua Utility System, Lake Aqua Utility System, and Unified Aqua Utility System. As of September 30, 2014, the FGUA consisted of ten separate water and wastewater systems located in fourteen counties in Florida. Each of the systems is accounted for as a separate enterprise fund of the FGUA. One enterprise fund continues to be maintained for the Barefoot Bay System to account for the Revenue Bond Payable used to acquire the system and Revenue Bond Receivable used by Brevard County to pay for their purchase of the system from the FGUA. There is also a Non-System Specific enterprise fund for the other minor contractual services provided by the FGUA.

GOLDEN GATE UTILITY SYSTEM

SERVICE AREA

Golden Gate is located north and east of I-75 between the Golden Gate main canal and CR 951, approximately four miles east of the City of Naples in western Collier County. Golden Gate occupies just more than four square miles of developed urban residential and light-commercial property.

The majority of properties are single-family residential. Commercial development consists of support services to the surrounding residents. The Collier County Water-Sewer District surrounds the Golden Gate system on all sides.

Approximately half of Golden Gate is served with public water service, while less than half of Golden Gate is served by central sewer. Those residents who are currently not connected use private wells and septic tanks.

Half of the southeast quarter of Golden Gate is comprised of a golf course, to which water and sewer service is provided and on which a water treatment plant is located. The remaining area in the southeast quarter is served with water and sewer. The FGUA continues to expand the water service area since additional water treatment capacity is available.

SYSTEM OPERATIONS

Water Treatment

The original water plant, constructed in 1965 and 1966, was a metal lime-softening treatment plant. This facility was expanded in 1989 to a lime-softening plant with a capacity of 1.224 million gallon per day (MGD). In July 2000, a 0.25 MGD reverse osmosis (RO) system was put on line at the existing water treatment plant site. In 2004, a 0.250 MGD RO system was put on line for a total treatment capacity of 1.70 MGD. In 2006 a phase 3 RO system of 0.300 MGD was put on line. In 2009 treatment unit “B” was converted from a 0.504 MGD lime softening unit into a raw water blend. The total production capacity of the Golden Gate system is now 2.099 MGD (0.720 MGD lime softening, 0.504 MGD raw blend and 0.875 MGD RO). All water treatment plant (WTP) expansion is contingent upon system growth. When needed the FGUA may be able to seek a paper rerate of the RO system to reflect more efficient membrane technology.

As shown in Table 1, plant flows averaged 1.394 MGD in fiscal year 2014 and represents 67% of the plant capacity.

Table 1 – Golden Gate Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Golden Gate – WUP Limit (Water Table Aquifer)	2.060	1.394	68%
Golden Gate – Treatment Capacity	2.099	1.394	67%

Wastewater Treatment

The wastewater treatment plant (WWTP), which is located next to the Golden Gate canal, is a 1.50 MGD annual average daily flow (AADF) conventional activated sludge domestic WWTP with effluent disposal to on-site percolation ponds and a deep injection well (DIW). The original plant was constructed in 1966 with a capacity of 0.3 MGD and was upgraded to 0.4 MGD in the 1980s and then again in 1995 to 0.95 MGD and in 2009 to its current capacity of 1.50 MGD AADF & 1.80 MGD TMADF.

As shown in Table 2, the average daily flow was 1.08 MGD in fiscal year 2014 – 60% of the plant capacity. The permit to operate the DIW was issued in fiscal year 2012. The DIW and associated dedicated RO brine concentrate line are currently in service. The RO brine concentrate bypasses the WWTP and is sent directly down the DIW.

Table 2 – Golden Gate Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Totals	1.80	1.50	1.08	60%

The utility system served a total of 3,640 water customers and 2,285 wastewater customers in fiscal year 2014. This slight decrease of 2.02% water and 2.72% wastewater customer counts is due to meter audit findings, not an actual decrease in properties connected.

LEHIGH ACRES UTILITY SYSTEM

SERVICE AREA

Lehigh Acres is in the Eastern portion of Lee County, Florida, located east of State Road 82 and south of State Road 80. Fort Myers is the largest population center located due west of Lehigh Acres. Lehigh Acres occupies approximately 94.9 square miles of developed residential and light commercial property. The majority of properties are zoned single family residential. Duplex

residential and light commercial properties are located along the main roadways. Originally designed as a retirement community, Lehigh Acres has grown in population to over 86,784 full and seasonal residents according to the 2010 US Census. Less than 50 percent of Lehigh Acres is served by public water service, with 38 percent served by central wastewater service. The FGUA has utility service primarily along three major roadway corridors, Lee Boulevard running east and west, Homestead Road running southwest and Joel Boulevard running north and south. Both old and new planned neighborhoods are scattered along these roadways and typically have water and wastewater service.

SYSTEM OPERATIONS

Water Treatment

The FGUA operates one 3.10 MGD lime softening water treatment plant (WTP No. 1) that includes thirteen raw water wells that supply all water to the Lehigh Acres Utility System. This supply can be supplemented if needed by an interconnect with the City of Fort Myers. There are two onsite storage tanks, one 1.0 million gallon and one 0.5 million gallon ground storage tanks and two offsite storage tanks including one elevated tank with a capacity of 0.25 million gallons and one ground storage tank with a capacity of 0.5 million gallons.

Due to high levels of total dissolved solids from the wells associated with WTP No. 2 FGUA completed the conversion of WTP No. 2 to a Booster Station in FY 2013. WTP No. 2 includes a 2.0 MG onsite storage tank. WTP No. 2 now receives all water from WTP No. 1. Chlorine and ammonia residuals are adjusted at WTP No. 2 to ensure adequate treatment is provided for the water that is sent to the southern portion of the Lehigh Acres service area.

Eventually when growth resumes in Lehigh Acres, WTP No. 2 will be modified to include Reverse Osmosis treatment. Plans call for WTP No. 2 to eventually be expanded to 10.0 MGD and will provide for all future growth in Lehigh Acres. Until growth resumes, WTP No. 2 will be operated as a booster station. As shown in Table 3, the average daily flow was 2.05 MGD in fiscal year 2014 and represents 66% of plant treatment capacity.

Table 3– Lehigh Acres Water Treatment Plant Flows

	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
WUP Limit	3.300	2.051	62%
Treatment Capacity	3.100	2.051	66%

Wastewater Treatment

The FGUA operates one wastewater treatment plant (WWTP) with a permitted capacity of 3.5 MGD AADF. The WWTP also includes a deep injection well (DIW) with a permitted disposal capacity of 18.6 MGD which will allow for all future expansions of the WWTP. The plant is comprised of three separate plants which include contact stabilization activated sludge process plants and a Zenon membrane plant. The Zenon membrane plant is not currently in use and is planned for demolition in the future. The WWTP produces public access quality reclaimed water that is used for irrigation on three golf courses. During periods of wet weather the effluent is diverted to extensive onsite ponds

for storage, percolation and evaporation. The DIW is also used for effluent disposal during wet weather. As shown in Table 4, the average daily flow was 1.707 MGD in fiscal year 2014 and represents 49% of plant treatment capacity.

Table 4– Lehigh Acres Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Totals	4.80	3.50	1.707	49%

The customer service center provides utility billing and other services to 12,448 water customers and 10,204 wastewater customers. This represents a decrease of approximately 1.18% water and a decrease of approximately 1.40% wastewater customers in 2014. This decrease is due to an audit of meters, not an actual decrease in properties connected.

PASCO UTILITY SYSTEM – ALOHA GARDENS & SEVEN SPRINGS

SERVICE AREA

The physical facilities of the Pasco Utility System are located in two distinct service areas, the Aloha Gardens service area and the Seven Springs service area. The Pasco Utility systems are located in Pasco County, immediately north of Pinellas and Hillsborough Counties, with the Aloha Gardens service area west of U.S. Highway 19 and the Seven Springs service area to the east of U.S. Highway 19.

SYSTEM OPERATIONS

Aloha Gardens Water Treatment

The Aloha Gardens water system consists of three water treatment plants, plants 1, 3 and 8; although at present only WTP No. 8 is in service. The Aloha Gardens system receives additional water purchased from Pasco County through three interconnects with the county utility system.

As shown in Table 5, Aloha Gardens flows averaged 0.405 MGD in 2014. The majority of water used in the Aloha Gardens service area was purchased from Pasco County due to the WUP withdrawal limitations and well field quality issues.

Table 5 – Aloha Gardens Water Treatment Plant Flows

WTP No. 8	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Aloha Gardens WUP*	0.136	0.070	
Purchased Water*	0.949	0.335	
*Total combined capacity shall not exceed 1.085 MGD AADF	1.085	0.405	37%

Aloha Gardens Wastewater Treatment

Wastewater from the Aloha Gardens service area is sent to Pasco County for treatment through a bulk service agreement. Since the Aloha Gardens service area is built out, the agreement is sufficient for future wastewater treatment needs of this area.

Seven Springs Water Treatment

The Seven Springs water system previously consisted of seven small water treatment plants. In FY 2011 the Centralized Mitchell Road WTP, Pasco County Interconnect and Raw Water Transmission Main projects were completed. The system is now served by the centralized Mitchell Road WTP with additional water beyond the 3.789 MGD AADF WUP limitation being purchased from Pasco County. The Seven Springs water system is also interconnected with Pasco County and is required to purchase all water needed above the 3.789 MGD AADF water use permit (WUP) limitations.

As shown in Table 6 below, the Seven Springs plant flows averaged 2.59 MGD in 2014 68% of its combined WUP withdrawal limitation and Bulk Water Agreement limit.

Table 6– Seven Springs Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Permitted Raw Water Withdrawal*	2.289	2.289	100%
Purchased Water Bulk Agreement Limit*	1.500	0.302	20%
*Total combined capacity shall not exceed 3.789 MGD AADF	3.789	2.591	68%

Seven Springs Wastewater Treatment

The wastewater treatment plant is a 2.5 million gallon per day (MGD), annual average daily flow (AADF), Type I modified conventional activated sludge domestic wastewater treatment facility consisting of: one mechanical screening and grit removal both with manual bypass, one splitter box, and one equalization tank of 500,000 gallons total volume. After the equalization tank, flow is split into three trains. The existing Train 3 consists of two aeration tanks of 227,000 gallons total volume, one clarifier of 105,500 gallons total volume and 1,531 square feet of total surface area. Trains 1 and 2 from the newly constructed plant consist of one aeration basin of 650,000 gallons each for a total of 1.3 million gallons (MG) total volume, three clarifiers of 191,000 gallons each and surface area of 1963 square feet each for a total of 573,000 gallons and 5,889 square feet of total surface area.

Combined flow from Trains 1, 2, and 3 are routed into an intermediate pumping station and from there to the one seven-cell declining rate filter of 3.4 MG and one automatic backwash filter of 4.1 MG. Both filters have a total capacity of 7.5 MG. From the filters, effluent flows via gravity to the two-bay, baffled chlorine contact chambers with a total volume of 95,505 gallons. After disinfection, effluent flows by gravity either to the reuse pumping station or to the reject holding tank or to the North Part IV pond, depending on its quality. Part III effluent flows to the reuse pumping station for distribution throughout the Seven Springs Service Area. Non-Part III effluent flows to the lined reject pond of 1.6 MG and/or to the reject holding tanks of 0.7 MG total volume for a total reject volume of 2.3 MG. Waste Activated Sludge (WAS) flows to seven biosolids holding tanks for a total volume of 1.195 MG. Chlorination is provided by a liquid chlorine feed

system with an existing gaseous chlorine system to serve as back-up. Two power generation units are provided which together are of sufficient capacity to supply emergency power to all essential plant units as required for Class I Reliability.

As shown in Table 7 below, the annual average daily flow was 1.596 MGD in fiscal year 2014. The current plant flow is within the plant's permitted capacity of 2.50 MGD. The Seven Springs wastewater treatment plant is currently operating within its permitted capacity.

Table 7 – Seven Springs Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	2.5	1.596	64%

The Pasco Utility System served a total of 16,001 water customers and 17,154 wastewater customers in fiscal year 2014. This represents a slight increase of 2.01% water and decrease of 0.81% wastewater customers for FY 2014.

CONSOLIDATED UTILITY SYSTEM

SERVICE AREA

The Consolidated Utility System was originally comprised of 6 small service areas: Anclote, Angus Valley, Colonial Manor, Dixie Groves, Virginia City and Westwood. The Mad Hatter and Paradise Lakes Utility systems were acquired on May 17, 2012 and were combined with the Consolidated Utility Systems. The Consolidated Utility System is now comprised of 13 small service areas and includes the areas previously mentioned above as well as: Carpenter's Run, Cypress Cove, Foxwood Lakes, Linda Lakes, Paradise Lakes, Turtle Lakes and Twin Palms.

Anclote

The Anclote water system is located in Pasco County, approximately 3 miles north of Tarpon Springs, approximately ½ mile south of the Pinellas/Pasco line, west of US Highway 19. The service area encompasses approximately 964 acres, extending both in Pasco and Pinellas Counties. The system consists of single and multi-family homes, mobile home parks, light commercial shops and public schools.

Treatment - All water is purchased from the city of Tarpon Springs.

Angus Valley

The Angus Valley water system is located approximately 23 miles east of New Port Richey on SR 54, ½ mile west of I-75 in the Angus Valley subdivision approximately 1.3 miles west of Wesley Chapel on Dayflower Boulevard west of Old Pasco Rd and ½ mile north of SR 54.

Treatment - Water is withdrawn from two production wells in the Floridan Aquifer. There are two hydro pneumatic tanks both with capacities of 5,000 gallons. Chlorine is injected for disinfection.

Colonial Manor

The Colonial Manor water system is located in Pasco County, approximately 1 mile southwest of the city of Elfers, ½ mile east of US Highway 19, in the subdivision off of Mogg Rd. The service area encompasses approximately 162.4 acres consisting of residential, light commercial and office spaces.

Treatment - All water is purchased from Pasco County.

Dixie Groves

The Dixie Groves water system is located in Holiday which is in the western portion of Pasco County, 3 miles south of New Port Richey, and one mile east of the intersection of US Highway 19 and County Rd. 595. The service area encompasses approximately 42 acres consisting of residential, light commercial and office spaces.

Treatment - Water is withdrawn from two production wells in the Floridan Aquifer. There are two hydro pneumatic tanks with capacities of 1,500 and 3,000 gallons. Chlorine is injected for disinfection.

Virginia City

The Virginia City water system is located in New Port Richey, on Thys Road, in Pasco County, approximately 2.5 miles east of US Highway 19 on the north side of SR 54.

Treatment – Water is withdrawn from one production well in the Floridan Aquifer. There is one hydro pneumatic tank with a capacity of 5,000 gallons. Chlorine and Ammonia are injected for disinfection via chloramination.

Westwood

The Westwood water system is located in southwestern Pasco County, north of Tarpon Springs, ½ mile west of US Highway 19. The Westwood service area encompasses approximately 182 acres. The system consists of mostly single family residential units.

Treatment - Water is withdrawn from one production well in the Floridan Aquifer. There is one hydro pneumatic tank with a capacity of 10,000 gallons. Chlorine is injected for disinfection. There is also an emergency interconnect with Pasco County Utilities.

Mad Hatter Utility Systems

The Mad Hatter utility systems are located along State Road 54 (SR 54) near the intersection of US 41 in the south-central portion of Pasco County, Florida. The Mad Hatter systems are summarized below.

Carpenters Run

Treatment - The Carpenter's Run WTP consists of two water supply wells, two 10,000 gallon hydro pneumatic tanks, a diesel drive back up for one of the wells, and a gas chlorination system for disinfection. All Mad Hatter water systems with the exception of Paradise Lakes are permitted as a basin under Water Use Permit No. 590.009 for 1.2 MGD annual average daily flow.

All wastewater within the Carpenters Run service area is sent to Pasco County via an interconnect for treatment.

Cypress Cove

Treatment - The Cypress Cove WTP consists of two water supply wells, a gas chlorination system for disinfection, a polyphosphate chemical system, and two 10,000 gallon hydro pneumatic tanks.

All wastewater within the Cypress Cove service area is sent to Pasco County via an interconnect for treatment.

Foxwood Lakes

Treatment - The Foxwood Lakes WTP consists of one water supply well with a diesel engine drive back up, a gas chlorination system for disinfection, one 10,000 gallon hydropneumatic tank.

All wastewater within the Foxwood Lakes service area is sent to Pasco County via an interconnect for treatment.

Linda Lakes

Treatment - The Linda Lakes WTP consists of one water supply well, treatment via liquid chlorine, and one 5,000 gallon hydro pneumatic tank.

The Linda Lakes service area also includes a small WWTP permitted to treat 20,000 gallons per day. The WWTP consists of a mechanical bar screen and grit removal system, four aeration basins, clarifier, chlorine contact chamber, digester and rapid infiltration basin.

Paradise Lakes

Treatment - The Paradise Lakes WTP consists of two wells, a 10,000 gallon hydro pneumatic tank, a gas chlorination system for disinfection and an 8kW propane generator. This system is permitted for 77,000 annual average daily under Water Use Permit No. 6223.

All wastewater within the Paradise Lakes service area is sent to Pasco County via an interconnect for treatment.

Turtle Lakes

Treatment - The Turtle Lakes WTP consists of two water supply wells, gas chlorination system for disinfection, and one 20,000 gallon hydro pneumatic tank.

All wastewater within the Turtle Lakes service area is sent to Pasco County via an interconnect for treatment.

Twin Palms

Treatment - The Twin Palms WTP consists of one water supply well, a dual tank gas chlorination system with a booster pump, a 90kW emergency generator, 10,000 gallon hydro pneumatic tank. The well, generator and chlorination system are located in a small building.

All wastewater within the Twin Palms service area is sent to Pasco County via an interconnect for treatment.

SYSTEM OPERATIONS

As shown in Table 8 below, all Consolidated System plant flows were under capacity leaving room for growth if needed.

Table 8 – Consolidated System Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Anclote (Water purchased from Tarpon Springs)	N/A	0.040	N/A
Angus Valley (2 wells) – WUP Limit	0.190	0.111	58%
Colonial Manor (Water purchased from Pasco)	N/A	0.079	N/A
Dixie Groves (2 wells) – WUP Limit	0.075	0.034	45%
Virginia City (1 well and interconnect) – WUP Limit	0.091	0.049	54%
Westwood (1 well and Interconnect) – WUP Limit	0.044	0.015	34%
Carpenters Run *		0.158	
Cypress Cove *		0.148	
Foxwood Lakes *		0.000	
Linda Lakes *		0.011	
Turtle Lakes *		0.369	
Twin Palms *		0.000	
Paradise Lakes – WUP Limit	0.077	0.060	78%

* These systems are combined and Permitted as a basin under the WUP.

WWTP	Permitted Capacity (MGD) TMADF	Average Daily Flow (MGD)	% Capacity
Totals	0.020	0.016	80%

The Consolidated Utility System served a total of 6,363 water customers and 3,321 wastewater customers in fiscal year 2014. This represents a slight increase of 4.38% water and 6.89% wastewater customers for FY 2014. This increase is primarily due to an audit of meters, not an actual increase in properties connected.

LINDRICK UTILITY SYSTEM

SERVICE AREA

The Lindrick service area is comprised of approximately 3.24 square miles and consists of a population of approximately 4,600 people. The majority of the Lindrick service area is located west of US-19 on Florida's Gulf of Mexico coastline.

Lindrick's water supply comes from the Floridan Aquifer. The water system serves its customers with eight permitted supply wells under Southwest Florida Water Management District (SWFWMD) water use permit number 2978.013. The majority of customers served are residential.

Flows from the 19 lift stations in the Lindrick wastewater collection system are sent to the City of New Port Richey wastewater treatment plant under a bulk wastewater service agreement. The current agreement is in effect until July 1, 2021 and allows up to 700,000 gallons per day of treatment capacity. Under the terms of the agreement with the City of New Port Richey, the Lindrick system must maintain the chloride levels below 600 mg/l and use its best efforts to achieve chloride levels of 400 mg/l. The Lindrick utility system continually exceeds chloride levels of 400 mg/l. Due to theses exceedances the FGUA initiated a chloride reduction project with USWWT to identify and correct deficiencies in the collection system. This project was initiated in fiscal year 2012 and is currently still in progress.

SYSTEM OPERATIONS

Water Treatment

The Lindrick system organized in 1960 to serve the Gulf Harbor Development and was acquired by the Lindrick Service Corporation in 1965. In November 2002 Lindrick Service Corporation began purchasing water from Pasco Reserve Corp to supplement its water supply. Subsequently on November 9, 2009 ownership of the Lindrick Utility System and Pasco Reserve well field and transmission lines were transferred to the FGUA.

The Lindrick system consists of eight permitted production wells (No. 1, 2, 3, 4, 5, 6, 7, 8). Wells No. 1 and 7 are currently out of service. Well No. 1 includes a 10,000 gallon hydropneumatic tank, Well No. 4 includes a 6,000 gallon hydropneumatic tank, and Well No. 5 includes a 5,000 gallon hydropneumatic tank.

Water from all wells is conveyed to a centralized treatment system located at Well No. 1. Ammonium Sulfate and Liquid Chlorine is injected for disinfection using chloramines.

As shown in Table 9 on the next page, plant flows averaged 0.597 MGD in fiscal year 2014 and represents 69% of the permitted raw water withdrawals and 69% of treatment capacity.

Table 9 – Lindrick Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Lindrick WTPs – WUP Limit	0.870	0.597	69%
Lindrick WTPs – Treatment Capacity	0.870	0.597	69%

Wastewater Treatment

The Lindrick wastewater collection system serves a population of approximately 4,600 persons, consists of approximately 550 manholes, 137,500 feet of gravity sewer and nineteen lift stations. Lift station No. 17 is a triplex station with three pumps and all other stations are dual pump submersible type.

The wastewater from the Lindrick area is pumped to the old Lindrick WWTP which has been converted to a “Master Lift Station” (No. 17). From the master lift station it is sent to the City of New Port Richey WWTP for treatment and disposal under a Bulk Wastewater Treatment Agreement which allows up to 700,000 GPD of treatment capacity. The bulk wastewater agreement was reduced from 850,000 GPD to the current 700,000 GPD in fiscal year 2013. The current ADF being sent to the City of New Port Richey is within the Bulk Wastewater Treatment Agreement and should

provide enough capacity into the 10 year planning period. As shown in Table 10, average daily flows were 0.432 MGD and represent 62% of capacity.

Table 10 – Lindrick Wastewater Collection System Flows

WWTP	Bulk Service Agreement (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	0.700	0.432	62%

The Lindrick Utility System served a total of 3,078 water customers and 2,577 wastewater customers in FY 2014. This represents a slight increase of approximately 0.20% water and 0.35% wastewater customers.

NORTH FORT MYERS UTILITY SYSTEM

SERVICE AREA

The North Fort Myers service area was initially organized by North Fort Myers Utility, Inc. on January 23, 1978 to provide central sewer service to Old Bridge Park, a mobile home community. Since then it has expanded its service area to include a large portion of the unincorporated area north of the Caloosahatchee River in Lee County, FL. On June 17, 2010 North Fort Myers Utility, Inc. sold the North Fort Myers Utility system to the FGUA.

The service area also includes two small water systems, Pine Lakes and Lake Fairways both located in Lee County, in North Fort Myers, at 10200 Pine Lakes Boulevard and 19371 North Tamiami Trail, respectively. The water distribution system is comprised of approximately 128,175 LF of 2" through 8" water mains serving approximately 1,841 residential units. Both communities are built out and future development and expansion are not expected.

SYSTEM OPERATIONS

Water Treatment

The water distribution system consists of two separate systems: Pine Lakes and Lake Fairways. Both Pine Lakes and Lake Fairways systems are built out with no future development expected.

The Pine Lakes water system is supplied by Lee County through a master meter. The master meter is located on U.S. 41. The Lake Fairways water system consists of two production wells in the Mid Hawthorn Aquifer which send the raw water to a centralized water treatment plant located inside the community. Raw water is sent to a tray aeration unit mounted on the roof of the ground storage tank which removes hydrogen sulfide and small amounts of ferrous iron. Liquid chlorine is used for disinfection.

Treated water is stored in two storage tanks located at the treatment plant. There is a 200,000 gallon concrete ground storage tank and a 7,500 gallon hydro pneumatic tank. The Lake Fairways WTP current WUP limit is 0.094 MG AADF.

As shown in Table 11, plant flows averaged 0.094 MGD in 2014 and represents 93% of the plants permitted water use capacity and 47% of treatment capacity.

Table 11 – North Fort Myers Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Lake Fairways – WUP limit	0.101	0.094	93%
Lake Fairways – Treatment Capacity	0.200	0.094	47%

Wastewater Treatment

The North Fort Myers system is served by two separate collection and treatment facilities, the Del Prado WWTP and the Lake Fairways WWTP.

The Del Prado WWTP is located in Northern Lee County in North Fort Myers, at 4100 Del Prado Boulevard, approximately 1.6 miles east of Tamiami Trail (US 41) and serves approximately 42,000 people. The treatment plant was recently expanded to 4.80 TMADF. The plant is an extended aeration process domestic wastewater treatment facility and includes an influent mechanical screen, a by-pass bar screen, a grit removal system, two EQ tanks, two oxidation ditches, two clarifiers, a chemical feed system, two traveling bridge filters, a chlorine contact chamber, a reject chlorine contact chamber, two digesters, a rotary drum thickener with polymer feed system, a lime silo, two sludge holding tanks and a 1.0 MG reuse storage tank. There is also a 4.87 MGD deep injection well located at the WWTP.

The Lake Fairways WWTP is an extended aeration process domestic WWTP with a permitted capacity of 0.300 MGD AADF. The facility consists of an influent screen, one surge tank, two aeration basins, two clarifiers, one digester and a clear well. The facility includes a public access reuse system which is used to irrigate the Pine Lakes golf course.

The annual average daily flow for fiscal year 2014 was 2.582 MGD for the Del Prado WWTP. The current plant flow is within the plant's permitted capacity of 4.8 MGD. The Lake Fairways WWTP is also operating well within its permitted capacity. See Table 12.

Table 12 – North Fort Myers Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Del Prado WWTP	4.80	4.250	2.582	61%
Lake Fairways WWTP	N/A	0.300	0.129	43%

The utility system served a total of 1,841 water customers and 11,857 wastewater customers in fiscal year 2014. This represents a decrease of 0.43% in water customers and a 0.25% increase in wastewater customers for FY 2014. This change is primarily due to an audit of meters, not an actual change in properties connected.

MACDILL AIR FORCE BASE UTILTIY SYSTEM

SERVICE AREA

The MacDill Air Force Base (AFB) is located eight miles south of downtown Tampa on the Southwestern tip of the interbay Peninsula on the west coast of Florida. The AFB privatized utilities in 2011 and ownership of all water and wastewater system assets transferred to the FGUA. The FGUA now has the primary responsibility in operating and maintaining the system.

SYSTEM OPERATIONS

MacDill AFB Water Treatment

The MacDill AFB water system serves a population of approximately 12,800. MacDill AFB purchases treated water from the City of Tampa Water Department (CTWD), which utilizes the Hillsborough River as its primary water source. CTWD treatment includes coagulation, flocculation, sedimentation, pH stabilization, disinfection, fluoridation, filtration, and final disinfection with chlorine and ammonia. Water is conveyed to the AFB through three interconnects with CTWD. Each of the three interconnects is equipped with a 6 inch water meter and backflow prevention device.

The MacDill AFB water system consists of treatment facilities, water storage tanks, and the transmission/distribution system, along with associated pumps, valves and appurtenances. The water system is well designed with multiple supply points, effective system looping, and sufficient storage capacity. The system utilizes sodium hypochlorite and ammonia to boost disinfection at the AFB.

As shown in Table 13, the MacDill plant flows averaged 0.903 MGD for fiscal year 2014.

Table 13 – MacDill AFB ADF

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
All Water Purchased from CTWD	N/A	0.903	N/A

Wastewater Treatment

The MacDill AFB wastewater system consists of collection facilities, lift stations, force mains, treatment facilities, an effluent disposal system and a biosolids disposal system. The wastewater treatment facility is permitted for 1.20 MGD AADF and is a conventional activated sludge system with mechanical bar screen, grit removal, flow equalization basin, pump station, fine bubble aeration basin, clarifiers, sand filters, chlorine contact basin and effluent pumping. The facility was originally constructed in 1952 and has been upgraded 6 times. The available wastewater treatment and disposal capacities for MacDill AFB are considered adequate to meet present and future demands.

Treated effluent is sent to the north pond to supply two golf courses for irrigation. The golf courses include about 320 acres of land on the base.

During FY 2014, the annual average daily flow was 0.465 MGD or 39% of the total plant capacity. The current plant flow is within the plant's permitted capacity of 1.20 MGD. See Table 14 below.

Table 14 – MacDill AFB Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	1.20	0.465	39%

PASCO AQUA UTILITY SYSTEM

SERVICE AREA

The Pasco Aqua Utility System is comprised of three potable water systems that serve approximately 3,200 connections, primarily residential. Two of these systems, Jasmine Lakes and Zephyr Shores have their own water treatment plants (WTPs) while the third system, Palm Terrace, purchases water from Pasco County Utilities and requires no additional treatment before distribution to its customers. The Pasco Aqua Utility System uses both treated groundwater and purchased water to serve its customers.

Jasmine Lakes

The Jasmine Lakes Water Treatment Plant (WTP) is located at 7612 Pineapple Lane in Port Richey. Four groundwater supply wells, referenced as the Oak Hill and Hickory Hill wells, provide the source of water for the Jasmine Lakes WTP.

Jasmine Lakes WTP has four groundwater wells that pump water into a 500,000 gallon, concrete ground storage tank for raw water storage. The raw water is treated by chlorination after it is pumped from the ground storage tank and receives disinfection contact time in a 20,000 gallon hydropneumatic tank prior to entering the distribution system. The hydropneumatic tank does not contain air, so it is acting solely as a contact tank.

The Jasmine Lakes WWTF is a Type II extended aeration domestic wastewater treatment facility located at 1000 Holly Lane in Port Richey. The WWTF has a capacity of 370,000 GPD permitted on the basis of a three-month rolling average daily flow (3MRAF). It is limited to 308,000 GPD annual average daily flow (AADF) however due to limited effluent disposal.

Palm Terrace

Palm Terrace Gardens is located north of the Jasmine Lakes utility system in Port Richey, and is a consecutive system that purchases all of its water from Pasco County Utilities.

The Palm Terrace Gardens WWTF is located at 116 Arbordale Drive in New Port Richey, and has a permitted AADF capacity of 130,000 GDP. The facility is permitted in terms of annual average daily flow (AADF) and is a Type II, extended aeration domestic wastewater treatment facility.

Zephyr Shores

The Zephyr Shores water treatment plant is located at 35235 State Road 54 in Zephyrhills. The WTP is served by two water supply wells that are located on the plant site.

Zephyr Shores WTP has two wells that pump water into a hydropneumatic tank. The water is chlorinated prior to entering the hydropneumatic tank.

The Zephyr Shores wastewater system is a collection system only. The wastewater is sent to Pasco County Utilities for treatment.

SYSTEM OPERATIONS

As shown in Table 15 and Table 16 below, all Pasco Aqua System plant flows with the exception of the Zephyr Shores WTP were under capacity.

Table 15 – Pasco Aqua System Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Jasmine Lakes – WUP Limit	0.300	0.203	68%
Palm Terrace - Interconnect	0.130	0.110	84%
Zephyr Shores – WUP Limit	0.028	0.025	87%

Table 16 – Pasco Aqua Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Jasmine Lakes	0.308	N/A	N/A
Palm Terrace	0.130	N/A	N/A
Zephyr Shores - Interconnect	N/A	N/A	N/A

The Pasco Aqua Utility System served a total of 3,292 water customer accounts and 2,676 wastewater customer accounts as of September 30, 2014.

LAKE AQUA UTILITY SYSTEM

SERVICE AREA

The Lake Aqua Utility System is comprised of 25 water treatment plants (WTPs) and seven wastewater treatment facilities (WWTFs) throughout Lake County, Florida consisting of both residential and commercial customers.

SYSTEM OPERATIONS

Water Treatment

The water treatment systems provide potable drinking water to approximately 5,174 customers. Most of the water systems are relatively small, with 16 of the 25 systems serving 200 connections or less. Nine of the water treatment systems serve a customer base that ranges from 200 to 400 connections. The largest system in the group (Silver Lake Estates W TP) has a treatment capacity of 0.629 million gallons per day (MGD) and serves 1,143 connections. Each water treatment system utilizes one or two water supply wells, most which are permitted by the Florida Department of

Environmental Protection and have a Consumptive Use Permit (CUP) from the St. Johns River Water Management District (SJRWMD).

As shown in Table 17, all Lake Aqua System WTP flows were under capacity leaving room for growth if needed, with the exception of Haines Creek.

Table 17 – Lake Aqua WTP System Flows

Wastewater Treatment

The seven WWTFs range in size from 20,000 to 80,000 gallons per day. Process treatment at each facility consists of extended aeration treatment for domestic wastewater using chlorine disinfection for final treatment prior to effluent discharge. Effluent disposal usually consists of rapid infiltration basins or permitted reuse facilities using spray fields.

As shown in Table 18, all Lake Aqua System WWTP flows were under capacity leaving room for growth if needed.

Table 18 – Lake Aqua WWTP System Flows

WWTP	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Fairways at Mt. Plymouth	0.075	0.030	40%

The Lake Aqua Utility System served a total of 5,174 water customer accounts and 1,167 wastewater customer accounts as of September 30, 2014.

UNIFIED AQUA UTILITY SYSTEM

SERVICE AREA

The Unified Aqua Utility System is comprised of 43 water treatment systems and 12 wastewater systems located throughout various Florida counties which include Alachua, Citrus, Hardee, Lee, Marion, Orange, Polk, Putnam, Seminole and Volusia Counties.

SYSTEM OPERATIONS

Water Treatment

The 40 water treatment systems in the Aqua Unified Utility System have permitted capacities ranging from a minimum of 0.002 MGD to a maximum of 0.427 MGD. Twelve of the water systems do not have consumptive use permits due either to the smaller size of their system or because the facility purchases water from a neighboring utility. Most of the water facilities are relatively small with 31 systems serving 200 connections or less. Seven of the water treatment systems serve between 200 and 400 connections while the largest system in the group (Seminole County - Chuluota) has a permitted capacity of 0.427 (MGD) and serves 1,410 connections. Each water treatment system utilizes one or two water supply wells, most which are permitted by the Florida

Department of Environmental Protection and have a Consumptive Use Permit (CUP) from one of the Florida Water Management Districts (WMDs).

As shown in Table 19, all Unified System plant flows were under capacity leaving room for growth if needed.

Wastewater Treatment

The 13 wastewater systems in the Aqua Unified Utility System range in size from 0.004 to 0.129 MGD based on average daily flows. The collections systems which serve these facilities include approximately 166,000 linear feet of gravity mains and force mains in addition to associated pump stations. Two of the wastewater systems (Lake Gibson and Beecher's Point) pump flows to a neighboring utility for treatment and disposal. The remaining ten systems in the group have treatment facilities consisting of extended aeration process treatment for domestic wastewater using chlorine disinfection for final treatment prior to effluent discharge. Depending on the facility, effluent disposal consists of using permitted reuse facilities comprised of rapid infiltration basins, percolation ponds, holding ponds, spray fields, spray irrigation (golf course), or through an existing reclaimed water agreement (City of Oviedo).

As shown in Table 20, all Unified System plant flows were under capacity leaving room for growth if needed, with the exception of Rosalie Oaks and Village Water.

Table 20 – Unified Aqua Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) AADF	Permitted Capacity (MGD) TMADF	Three Month Average Daily Flow (MGD)	Average Daily Flow (MGD)	% Capacity

*Lake Gibson is an Interconnected System

The Unified Aqua Utility System served a total of 7,924 water customer accounts and 1,962 wastewater customer accounts as of September 30, 2014.

Economic Condition

The information presented in the financial statement is perhaps best understood when it is considered from the broader perspective of the specific environment within which the FGUA utility systems are located.

Both the Lehigh Acres system and the North Fort Myers system are located in Lee County, which had been one of the fastest growing regions in the nation until the downturn in the housing market. According to data from the Florida Legislature Office of Economic and Demographic Research, Lee County's population was anticipated to increase from 618,754 in 2010 to 643,367 in 2013, an increase of 4.0%. The increase in the number of housing units permitted in Lee County increased from 1,276 in 2010 to 2,043 in 2012, an increase of 60.1%. The unemployment rate continued to decline from the peak of 12.6% in 2010 to 7.0% in 2013. Recent foreclosure information suggests that the housing market is slowly improving, but significant recovery may take a number of years. Personal bankruptcy filings improved from 5.29 per 1,000 of population in 2011 to 3.73 per 1,000 of population in 2012. The two Lee County systems have a significant amount of undeveloped land for future growth and expansion.

The Golden Gate System is located in Collier County, According to data from the Florida Legislature Office of Economic and Demographic Research, Collier County's population was anticipated to increase from 321,500 in 2010 to 336,783 in 2014, an increase of 4.7%. The increase in the number of housing units permitted in Collier County increased from 1,259 in 2010 to 2,678 in 2013, an increase of 113%. The unemployment rate continued to decline from the peak of 11.6% in

2010 to 6.9% in 2013. Personal bankruptcy filings improved from 4.19 per 1,000 of population in 2011 to 2.54 per 1,000 of population in 2013. As in the Lee County systems, there appears to be some improvement in housing market data in recent months. There is limited potential for new residential and commercial growth in Golden Gate.

The Pasco, Lindrick, Consolidated and Pasco Aqua Utility Systems are located in Pasco County. According to data from the Florida Legislature Office of Economic and Demographic Research, Pasco County's population is anticipated to increase from 464,697 in 2010 to 492,687 in 2015, an increase of 6.0%. The number of housing units permitted in Pasco County increased from 1,401 in 2011 to 1,974 in 2013, an increase of 40.9%. The unemployment rate continued to decline from the peak of 13.0% in 2010 to 6.7% in 2014. Personal bankruptcy filings continued to improve from 4.21 per 1,000 of population in 2012 to 3.57 per 1,000 of population in 2013. Again, recent data suggests a gradual improvement to market conditions. Portions of the FGUA service areas in Pasco County (Seven Springs) have significant potential for future growth and development, while others have limited growth opportunities.

The Lake Aqua Utility Systems are located in Lake County. According to data from the Florida Legislature Office of Economic and Demographic Research, Lake County's population is anticipated to increase from 297,047 in 2010 to 316,923 in 2015, an increase of 6.7%. The number of housing units permitted in Lake County increased from 517 in 2011 to 1,730 in 2013, an increase of 234.62%. The unemployment rate continued to decline from the peak of 12.3% in 2010 to 7.5% in 2013. Personal bankruptcy filings continued to improve from 5.80 per 1,000 of population in 2012 to 4.25 per 1,000 of population in 2013. Again, recent data suggests a gradual improvement to market conditions. The FGUA service areas in Lake County are largely built out and have limited growth opportunities.

The Unified Aqua Utility System is spread throughout 10 different Florida Counties. A majority of the customers are located within Seminole County and Polk County. According to released data from the Florida Legislature Office of Economic and Demographic Research, Seminole County's population is anticipated to increase from 422,718 in 2010 to 439,649 in 2014, an increase of 4.0%. Polk County's population was anticipated to increase from 602,095 in 2010 to 634,415 in 2015, an increase of 5.4%. The number of housing units permitted in Seminole County increased from 1,120 in 2011 to 2,069 in 2013, an increase of 84.73%. The number of housing units permitted in Polk County increased from 1,156 in 2011 to 2,034 in 2013, an increase of 75.95%. The unemployment rate continued to decline from the peak of 10.5% in 2010 to 6.4% in 2013 for Seminole County and 12.2% in 2010 to 8.2% in 2013 for Polk County. Personal bankruptcy filings improved from 5.08 per 1,000 of population in 2012 to 4.47 per 1,000 of population in 2013 for Seminole County and 3.52 per 1,000 of population in 2012 to 3.05 per 1,000 of population in 2013 for Polk County.

Internal Control

In developing and evaluating the FGUA's accounting system, consideration is given to the adequacy of internal accounting controls. Internal accounting controls are designed to provide reasonable, but not absolute assurance regarding: (1) the safeguarding of assets against loss from unauthorized use or disposition; and (2) the reliability of financial records for preparing financial statements and maintaining accountability for assets. The concept of reasonable assurance recognizes that: (a) the cost of a control should not exceed the benefits likely to be derived there from; and (b) the evaluation of costs and benefits requires estimates and judgments by management. We believe all internal control evaluations occur within the above framework and that the FGUA's internal accounting controls adequately safeguard assets and provide reasonable assurance of proper recording of financial transactions.

Budgetary Control

The FGUA maintains a system of budgetary controls. The objective of these controls is to ensure compliance with legal provisions embodied in the annual appropriated budget approved by the Board. The level of budgetary control (i.e., the level at which expenditures cannot legally exceed the appropriated amount) is at the fund level. The FGUA also maintains an encumbrance system as one method of maintaining budgetary control. Encumbered amounts lapse at year end; however, outstanding encumbrances are re-appropriated as part of the following year's budget.

The budget process begins in the spring, when the staff develops proposed capital projects and operating budgets, with input from the Capital Program and Operations Managers and the Contract Operator. A planning retreat by the Board of Directors and senior staff is conducted in February or March of each year and is used to establish or update long-range system goals. Detailed budgets are presented by staff to the Systems Manager in late May. The System Manager's budget is forwarded to the Board of Directors in June. Any adjustments to the budget, to include public hearings for any necessary rate changes, are typically conducted in August and September. The Board of Directors approves the final budget at a public hearing in September for the new fiscal year that begins October 1.

As demonstrated by the statements and schedules included in the financial section of this report, the FGUA meets its responsibility for sound financial management.

Factors Affecting Financial Condition

Capital Improvement Program – The FGUA has adopted a five-year Capital Improvement Program (CIP) for the years 2015 to 2019, which outlines additions and improvements to its utility systems. The FGUA reviews and updates this five-year plan annually, authorizing appropriations for those projects scheduled to be started during the ensuing fiscal year. The cost of all new projects for fiscal year 2015 is approximately $22.5 million, and is estimated to total $54.5 million for the fiscal years 2015 – 2019. The CIP for each system is segregated into five major program areas, as follows:

Wastewater Collection – This program calls for improvements to existing wastewater lines as well as the addition of new lines as the customer base increases. This program also calls for renewal of the existing system by repairing lines that allow infiltration/inflow and the rehabilitation of lift stations.

Wastewater Treatment Facilities/Disposal – This program seeks to increase existing capacity as well as upgrade existing facilities. The objectives of this program are to promote reuse of reclaimed water, protect the environment, ensure that treatment capacity is available for growth, and ensure that facilities are in compliance with regulations of the United States Environmental Protection Agency and the State of Florida Department of Environmental Protection.

Water Treatment Facilities (Water Production/Treatment) – This program ensures that the FGUA is able to deliver water to its customers during peak periods by expanding current production capabilities. This program also includes a comprehensive renewal program which provides for maintenance of water tanks, well pump facilities, well power systems, and filtration equipment.

Water Distribution – This program calls for improvements to existing water lines as well as the addition of new lines as the customer base increases.

Meters – In order to maintain accurate water usage data for appropriate billing and reporting, the FGUA replaces meters each year. Most residential meters are replaced at ten years of age. Larger meters need to be replaced more frequently.

General Projects – Specific project cost centers are created for special large projects as needed.

A total of $54.49 million in new capital improvements are slated for funding during the FY 2015 to 2019 planning period. The successful implementation of FGUA's Capital Improvement Program calls for a portion of funding to be provided through existing balances of construction funds from bonds, with the remaining amounts to be funded from operating revenues and impact fees.

Financial Policies

In January 2009, the FGUA Board approved a Net Asset (Working Capital) Policy in order to maintain and improve financial stability and manage its financial resources for its various enterprise funds to: (1) provide sufficient cash flow for daily financial needs, (2) secure and maintain the highest possible investment grade bond ratings, (3) position properly for significant economic downturns or revenue shortfalls, and (4) provide funds for unforeseen expenditures related to emergencies.

The FGUA's investment policy is designed to minimize credit and market risk while maintaining a competitive yield on its investments. As of the end of the Fiscal Year all deposits were entirely covered by either federal depository insurance or pooled collateral held by the State Treasurer pursuant to Chapter 280, Florida Statutes.

Awards and Acknowledgements

The Government Finance Officers Association of the United States and Canada (GFOA) awarded a twelfth consecutive Certificate of Achievement for Excellence in Financial Reporting to the Florida Governmental Utility Authority for its Comprehensive Annual Financial Report for the fiscal year ending September 30, 2013. In order to be awarded a Certificate of Achievement, a government must publish an easily readable and efficiently organized comprehensive annual financial report. This report must satisfy both generally accepted accounting principles and applicable legal requirements.

A Certificate of Achievement is valid for a period of one year only. We believe that our current Comprehensive Annual Financial Report continues to meet the Certificate of Achievement Program's requirements, and we are submitting it to the GFOA to determine its eligibility for another certificate.

The preparation of this report could not have been accomplished without the efficient and dedicated services of the financial staff. Appreciation is expressed to all those who assisted and contributed to its preparation and to the Board for its interest and support in planning and conducting the operations of the FGUA in a responsible manner.

Respectfully submitted,

Robert E. Sheets, System Manager

David M. DiLena, CPA, Chief Financial Officer

INDEPENDENT AUDITORS' REPORT

To the Board of Directors,
Florida Governmental Utility Authority:

Report on the Financial Statements

We have audited the accompanying financial statements of the business-type activities and each major fund of Florida Governmental Utility Authority (the Authority), as of and for the year ended September 30, 2014, and the related notes to the financial statements, which collectively comprise the Authority's basic financial statements as listed in the table of contents.

Management's Responsibility for the Financial Statements

The Authority's management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express opinions on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit includes performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Opinions

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the business-type activities and each major fund of the Authority, as of September 30, 2014, and the respective changes in financial position and cash flows thereof for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the management's discussion and analysis, as listed in the table of contents, be presented to supplement the basic financial statements. Such information, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Other Information

Our audit was conducted for the purpose of forming opinions on the financial statements that collectively comprise the Authority's basic financial statements. The introductory and statistical sections are presented for the purposes of additional analysis and are not a required part of the basic financial statements. The introductory section and statistical sections have not been subjected to the auditing procedures applied in the audit of the basic financial statements, and accordingly, we do not express an opinion or provide any assurance on it.

Other Reporting Required by *Government Auditing Standards*

In accordance with *Government Auditing Standards*, we have also issued our report dated March 9, 2015, on our consideration of the Authority's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the Authority's internal control over financial reporting and compliance.

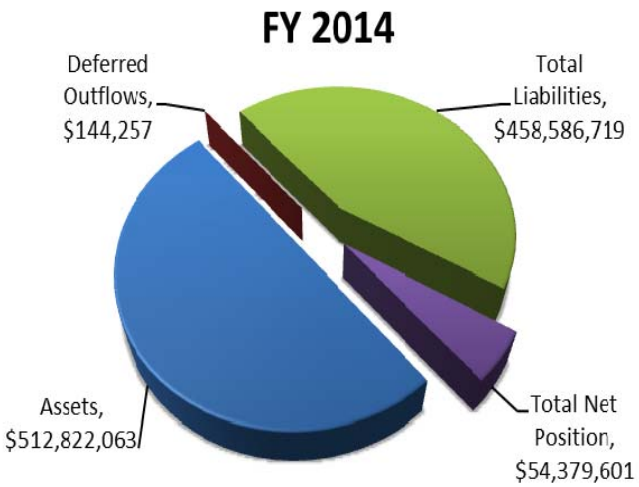
FLORIDA GOVERNMENTAL UTILITY AUTHORITY
MANAGEMENT'S DISCUSSION AND ANALYSIS
SEPTEMBER 30, 2014

As management of the Florida Governmental Utility Authority (FGUA), we offer readers of the FGUA's financial statements this narrative overview and analysis of the financial activities for the fiscal year ending September 30, 2014. We encourage readers to consider the information presented here in conjunction with additional information that we have furnished in our letter of transmittal, which can be found in the introductory section of this report. The most notable change within the Management's Discussion and Analysis, as well as the rest of the financial statements comes from the first full year of operations for the Lake Aqua, Pasco Aqua, and Unified Aqua Systems in 2014.

FINANCIAL HIGHLIGHTS

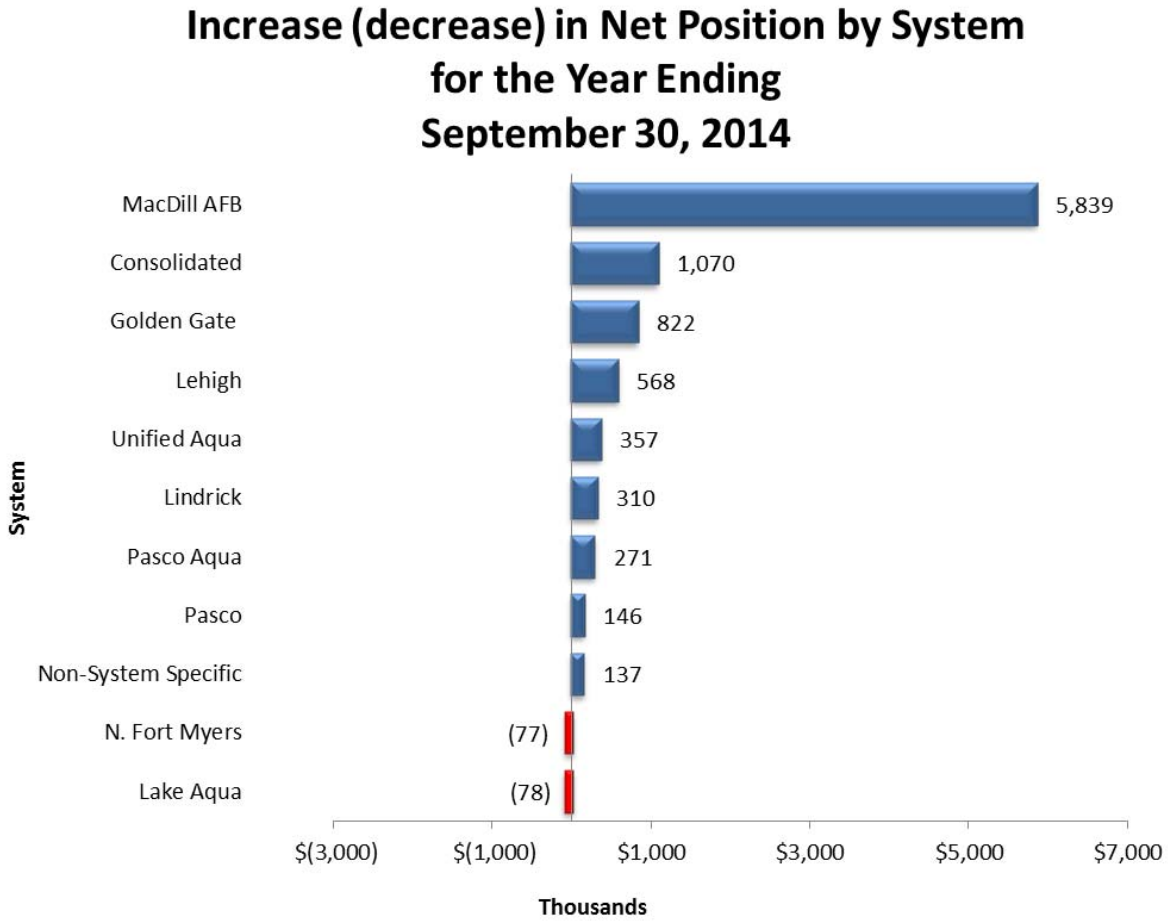
The assets and deferred outflows of the FGUA exceeded its liabilities and deferred inflows at the close of fiscal year 2014 by $54,379,601 as the chart to the right indicates. Of this amount, $34,211,857 may be used to meet the FGUA's ongoing obligations to citizens and creditors (Unrestricted Net Position). This is an increase of $6,982,346 or 26% in unrestricted net position from the prior year.



FGUA's total net position increased by $9.4 million in fiscal year 2014. As the chart on the next page indicates, certain systems contributed to the increase in total net position and other systems reduced total net position as follows:

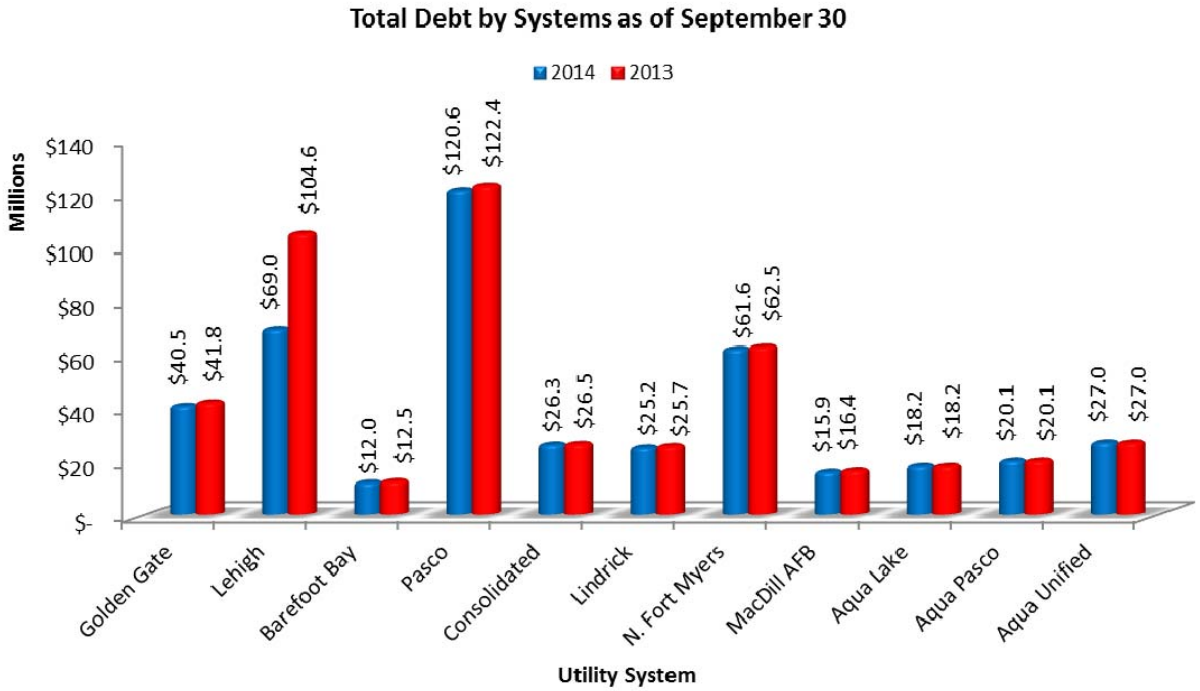
- The MacDill AFB Utility System contributed $5.8 million or 62.3% of the increase in total net position. This increase is primarily the result of additional capital contributions from the Federal Government for certain System Deficiency Correction (SDC) projects during the fiscal year.
- The Consolidated Utility System contributed over $1 million or 11.4% of the increase in net position, due to a 3.25% rate increase, and a 4% increase in the number of customers billed.
- The Golden Gate Utility System contributed $821,887 or 8.8% of the increase in total net position as a result of reducing annual interest expense by refunding the Series 1999 Bonds in fiscal year 2013, which resulted in lower interest payments for fiscal year 2014.
- The Lehigh Utility System contributed $568,044 or 6.1% of the increase in total net position as a result of refunding of the Series 2003 Bonds in 2013, which resulted in lower interest payments for fiscal year 2014.
- The Lake Aqua, Pasco Aqua, Unified Aqua Utility Systems contributed a combined $550,224 or 5.9% increase to total net position primarily as a result a full year of operations, as compared to only 6 months of operations under FGUA management in fiscal year 2013.

- The Lindrick Utility System contributed $309,623 or 3.3% of the increase in total net position, primarily as the result of capitalizing wastewater impact fees with the City of New Port Richey.
- The Pasco Utility System increased total net position by $145,930 or 1.6% primarily as a result of the 4.3% rate increase.
- The Authority has one non-specific fund that pre-pays expenses before a reasonable allocation basis can be determined. It also pays for the rare non-allocable for minor contractual services provided by the Authority. This fund had an increase in net position of $137,106, which increased the FGUA total net position by 1.5%.
- The North Fort Myers Utility System reduced total net position by $76,720 or -0.80%. The primary cause for the decrease in North Fort Myers net position is due to a reduction in Build America Bond Subsidies, which increased the amount of operating revenues used to pay debt service.



The net decrease in total debt as of September 30, 2014 was $41,380,657. As the chart below indicates, $35,661,988 or 86% of the reduction was in the Lehigh Utility System. The proceeds from the Lehigh Utility System Series 2012 Refunding Revenue Bonds ($33 million) were placed into an Escrow Deposit Agreement with Wells Fargo Bank on December 21, 2012 (FY 2013), and were paid out to the bondholders on October 1, 2013 (FY 2014). Additional information can be found in **Note 7** of the **Financial Section.**

The first principal payment towards the Aqua Utilities Systems debt was made on October 1, 2014 (FY 2015). Additional information can be found in **Note 7** of the **Financial Section.** Barefoot Bay Utility System is treated like a custodial fund, where FGUA records the outstanding debt, along with the restricted assets secured to pay the debt as it becomes due. In fiscal year 2014, principal payments reduced the debt in this system by $475,000. The remaining utility systems continue to pay down debt obligations as they become due and in accordance with bond indentures. In fiscal year 2014, principal payments reduced the debt in those systems by $5.2 million.



OVERVIEW OF THE FINANCIAL STATEMENTS

This discussion and analysis are intended to serve as an introduction to the Florida Governmental Utility Authority's (FGUA) basic financial statements. Since the FGUA is a special purpose government involved solely in the provision of water and wastewater services to its customers on a fee basis, all funds are accounted for in Proprietary Funds, specifically ten enterprise funds. Therefore, there are no government-wide financial statements, as they would be redundant to the fund financial statements. This report contains fund financial statements and notes to the financial statements. The report also contains other supplementary information in addition to the basic financial statements themselves.

Fund Financial Statements

A fund is a grouping of related accounts that is used to maintain control over resources that have been segregated for specific activities or objectives. The FGUA, like other state and local governments, uses fund accounting to ensure and demonstrate compliance with finance-related legal requirements. All funds of the FGUA are proprietary funds, with one fund set up for each geographically separate utility system operated by the FGUA.

Proprietary Funds

The FGUA operates only one type of proprietary fund, and a separate enterprise fund is maintained for each utility system. Enterprise funds are used to report business-type functions, which recover all or a significant portion of their costs through user fees and charges.

The proprietary fund financial statements are comprised of a Statement of Net Position, a Statement of Revenues, Expenses and Changes in Net Position, and a Statement of Cash Flows. The Statement of Net Position presents information on the FGUA's assets, deferred outflows of resources, liabilities, deferred inflows of resources and net position. The Statement of Revenues, Expenses and Changes in Net Position presents information on the revenues received, the expenses incurred, and the positive or negative results of the individual utility system's increase or decrease in net position, presented on an accrual basis. The Statement of Cash flows provides information on the cash flows of each utility system, based on operations, financing activities, capital uses, and investment activities and a supplemental schedule of noncash activities.

Notes to the Financial Statements The notes provide additional information that is essential to a full understanding of the data provided in the financial statements.

Other Information In addition to the basic financial statements and accompanying notes, this report also presents supplementary information concerning its compliance with the funding of outstanding debt issues. This information, known as Coverage Ratios, is provided as part of the information contained in the Statistical Section of this report.

GOVERNMENT-WIDE FINANCIAL ANALYSIS

Net position may serve over time as a useful indicator of a government's financial position. In the case of the Florida Governmental Utility Authority, the assets and deferred outflows exceeded the liabilities and deferred inflows by $54,379,601 at the close of fiscal year 2014. See the condensed Statement of Net Position on the below.

- Net investment in capital assets (e.g., land, buildings, machinery, and equipment), which is one of the four categories of net position and consists of capital assets, including restricted capital assets, net of accumulated depreciation and reduced by the outstanding balances of any bond or other borrowings that are attributed to the acquisition, construction, or improvements of those assets. Net investment in capital assets ended the year with a deficit balance of $17,843,579 which is an $830,507 increase from the prior year deficit balance of $17,013,072 primarily as the result of depreciation.
- Net Position Restricted for Capital Projects ended the year with a balance of $9,906,166, which is an increase of $1,795,330 as compared to the prior year primarily as the result of increases in the Renewal and Replacement, and the Capacity funds.
- Net Position Restricted for Debt Service ended the year with a balance of $28,105,157 which is an increase of $1,417,310 as compared to the prior year. This increase is the result of the debt service for the bonds that were issued during fiscal year 2013 for the acquisition of the Aqua Utility Systems. Restricted for Debt Service represents resources reserved for payment of the debt service (principal and interest) on external debt; consequently, these assets are not available for other uses.
- Net Position Unrestricted ended the year with a balance of $34,211,857 which is an increase of $6,982,346 or 25.6% as compared to the prior year and is available for other budgetary uses of the FGUA.

Florida Governmental Utility Authority Condensed Statement of Net Position

	2014	2013
Current & Other Assets	$ 238,523,673	$ 271,570,776
Capital Assets	274,298,390	273,503,016
Assets	**512,822,063**	**545,073,792**
Deferred loss on bond refunding	144,257	244,341
Deferred Outflows	144,257	244,341
Assets & Deferred Outflows	**$ 512,966,320**	**$ 545,318,133**
Long Terrm Liabilities	$ 427,175,876	$ 437,819,092
Other Liabilities	31,410,843	62,483,919
Total Liabilities	**458,586,719**	**500,303,011**
Net Position		
Net investment in Capital Assets	(17,843,579)	(17,013,072)
Restricted for Capital Projects	9,906,166	8,110,836
Restricted for Debt Service	28,105,157	26,687,847
Unrestricted	34,211,857	27,229,511
Total Net Position	**$ 54,379,601**	**$ 45,015,122**

In the past year, assets decreased by $32 million or 5.9%, primarily due to the Lehigh 1999 bond escrow bank account balance of $33 million being released to the bondholders on the first day of fiscal year 2014. Deferred Outflows decreased by $100,084 as a result of amortization of the deferred loss on bond refunding within the Consolidated and Golden Gate Utility Systems. Total liabilities decreased by $41.7 million or 8.3%. Thirty-three million of the decrease in total liabilities is the result of the release from liability for the Lehigh 1999 bonds when bondholders were paid October 1, 2013 (first day of fiscal year 2014).

The increase in net position of $9.4 million represents the degree in which revenues have exceeded expenses in the past year combined with the decrease in debt. See chart below. Eighty-eight percent of the $9.4 million increase in net position was provided by the MacDill AFB, Consolidated, Golden Gate, and Lehigh Utility Systems. The MacDill AFB Utility System contributed $5.8 million or 62.3% of the increase in total net position. Capital contributions from the federal government and federal subsidies to support the purchase of the MacDill assets account for $5.2 million of the increase to net position. The Consolidated Utility System contributed over $1 million or 11.4% of the increase as the result of a 3.25% rate increase, and a 4% increase in the number of customers. The Golden Gate Utility System contributed $821,887 or 8.8% of the increase as a result of reduced annual interest expense. The Lehigh Utility System contributed $568,044 or 6.1% of the increase in total net position, as the result of refunding the Series 2003 Bonds in early fiscal year 2013, which resulted in lower interest payments. The three Aqua Utility systems contributed a combined $550,224 or 5.9% increase to total net position. The decreased net position of the North Fort Myers Utility, $76,720 or 0.8%, is attributed to the reduction in Build America Bond subsidies, which resulted in higher net interest expenses. The remaining utility systems contributed small increases to net position (Lindrick 3.3%, Pasco 1.6%, and Non-System Specific 1.5%) as the result of capitalizing impact fees, a rate increase, and adjustments to the system allocation schedules.

The FGUA continues to maintain a financially healthy system. Unrestricted cash balance increased by 31% from $22.7 million in FY 2013 to $29.8 million in FY 2014, showing a financially healthy utility system with good liquidity.

Florida Governmental Utility Authority Condensed Statement of Revenues, Expenses, and Changes in Net Position

	2014	2013
Operating revenues	$ 75,691,308	$ 66,730,752
Operating expenses	(38,989,183)	(34,790,589)
Operating income before depreciation and amortization	36,702,125	31,940,163
Depreciation and amortization	(17,836,856)	(16,291,959)
Operating income	18,865,269	15,648,204
Investment revenue, net	861,473	583,567
Miscellaneous non-operating revenues	275,038	168,365
Interest expense, net	(18,120,059)	(18,180,255)
Debt issuance cost	-	(2,277,145)
Income (loss) before capital contributions	1,881,721	(4,057,264)
Recoverable Portion of Purchase Price	1,523,016	1,523,016
Capital contributions & Grants	5,959,742	8,251,850

Total net position - beginning	45,015,122	39,297,520
Total Net Position - end of year	**$ 54,379,601**	**$ 45,015,122**

SIGNIFICANT CAPITAL ASSET AND LONG TERM DEBT ACTIVITY

The fiscal year ending September 30, 2014 represents the fifteenth full fiscal year of the FGUA's operations. During this period, the following significant events occurred:

Capital Asset

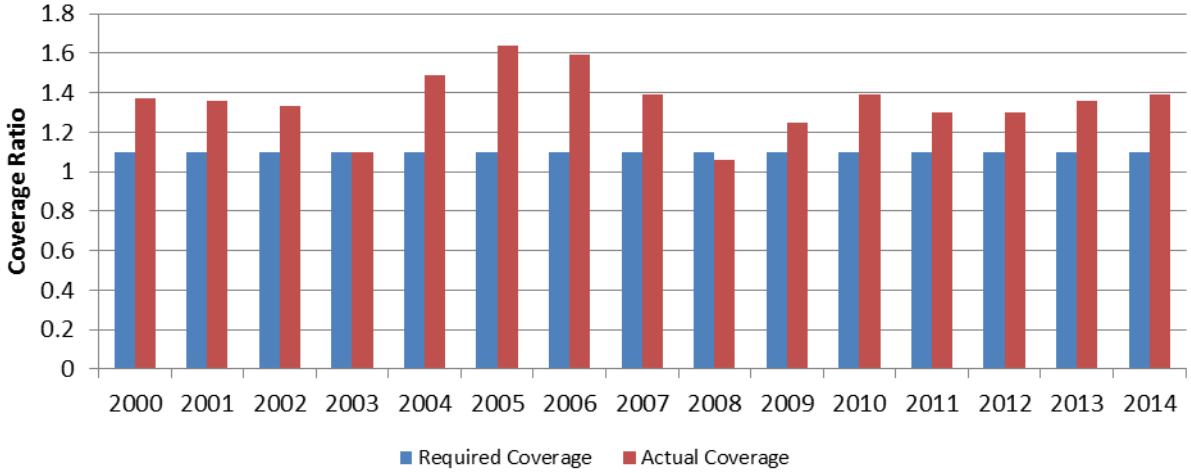
During FY 2014, the FGUA increased its net capital assets by $795,374 from the prior year. The MacDill AFB Utility System accounted for $4.1 million or 12.2% of the increase in net capital assets during the year thanks to federally-funded system deficiency correction projects. The Pasco, Consolidated, Aqua Lake and Aqua Unified Utility Systems had minor increases in net capital assets during the current year totaling $1.9 million or 5.8% of the net increase. The Golden Gate, Lehigh, Lindrick, North Fort Myers, and Aqua Pasco Utility Systems had minor decreases in net capital assets where depreciation expense exceeded current year additions to fixed assets and accounted for a reduction in net assets of $5.4 million or 15.9%. Of the $274 million recorded for Capital Assets (net of depreciation), $7.5 million represent costs incurred for capital projects that are under construction, but not yet completed as of September 30, 2014. Additional information on the FGUA's capital assets can be found in **Note 6** of the **Financial Section**.

Debt Administration

On September 30, 2014, the FGUA had revenue bonds, state revolving loans, and a seller financed note outstanding in the amount of $436 million. This is a decrease of $41.4 million from the prior year's debt balance of $478 million. The majority of the decrease in outstanding debt comes from the release of liability from the Lehigh 1999 bonds, when $33 million was released from the escrow account to bondholders. The remainder of the decrease is attributed to principal repayments of $8.9 million. During fiscal year 2014, debt service payments into debt sinking funds totaled $27.0 million ($8.9 million-principal, $18.1 million-interest).

Half of the outstanding debt issues are fully insured via municipal bond insurance policies issued by Ambac Assurance Corporation and Assured Guaranty. The remaining issuances have reserve accounts with a September 30, 2014 fair market value of $20.9 million.

The following chart shows the actual coverage compared to the required coverage for the past fifteen years.



Refer to **Note 7** and the **Statistical Section** for more information on the FGUA's Long Term Debt and Coverage Ratios for each utility system.

FACTORS EXPECTED TO HAVE AN ECONOMIC IMPACT ON FUTURE OPERATIONS

Future Growth in Customers

Due to continued economic conditions, customer growth within each utility system continues to be below expectations. There was positive overall utility growth for fiscal year 2014 of 3.55% for water customers and 4.09% for wastewater customers compared to the prior year increases of 36.36% and 14.01% for water and wastewater customers, respectively. The fiscal year 2013 increase was due to the acquisition of the Aqua Utility Systems. The changes in customer counts in 2014 were verified through billing and meter audits. In the Aqua systems, many vacant homes that are connected were not included in the 2013 customer counts. In the Golden Gate, Lehigh and North Fort Myers systems, some households were mistakenly double-counted in 2013 because of changes in tenants or miscounting compound meters. In comparison to prior years, the rate of future growth is predicted to be relatively flat. Management monitors growth closely as it has an impact on the infrastructure needs of the Utility Systems and requires prudent long term capital planning. The FGUA will continue to meet system demands by managing the capital improvement projects in accordance with the FGUA capital improvement plan that was adopted along with the FGUA operating budget. (Further information on customer growth for the past nine years can be found in the **Statistical Section**).

FINANCIAL INFORMATION

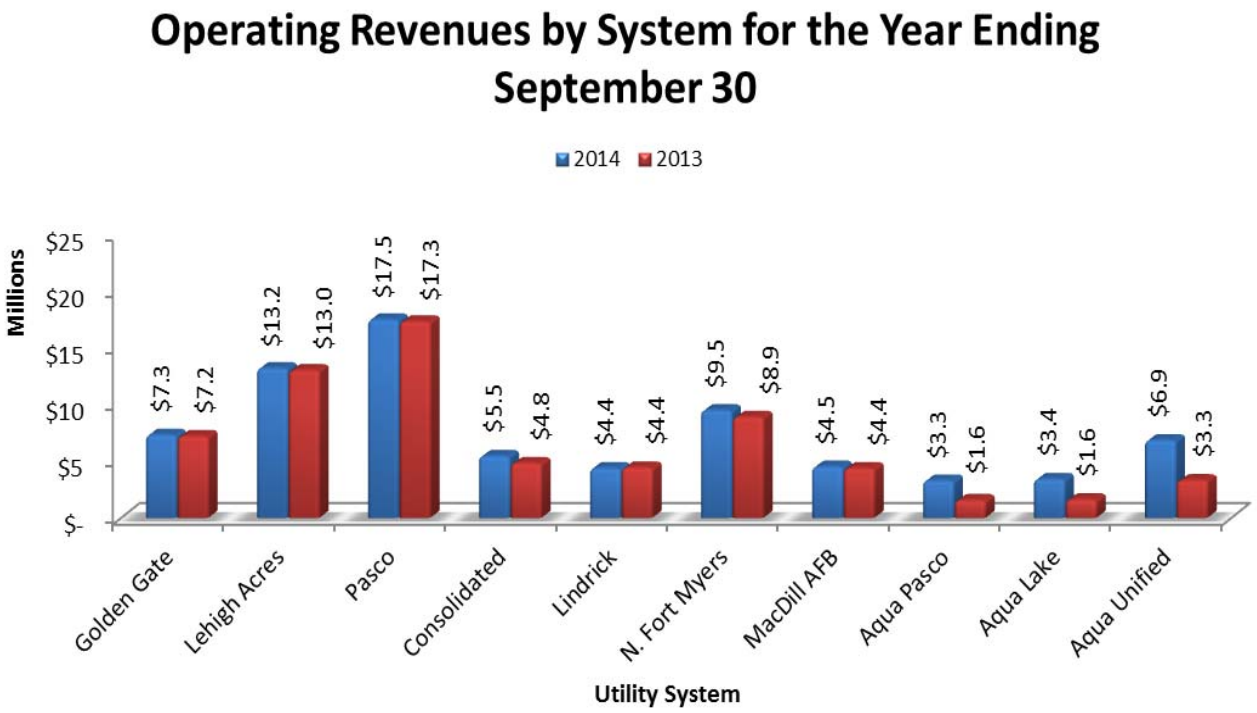
Operations

A core function of the FGUA is to use the collective power of local governments, performing as board members, to acquire, improve, operate, and maintain water and wastewater facilities. Local governments hold the option to acquire any FGUA utility system within its jurisdiction. This makes the FGUA a unique local government. The financial statements can fluctuate significantly as the FGUA acquires utility systems or transitions them over to the local government. There are also years that have small to moderate fluctuations when there are no acquisitions or transitions, and the financial activities are only reflective of traditional operational activities.

The main difference in FY 2014 operations as compared to FY 2013, is related to the March 2013 acquisition of the three Aqua Utility Systems. This acquisition included the purchase of 69 water systems and 20 wastewater systems within Alachua, Citrus, Hardee, Lake, Lee, Marion, Orange, Pasco, Polk, Putnam, Seminole and Volusia counties. Fiscal year 2014 is the first year showing a full twelve months of activity for Lake Aqua, Pasco Aqua, and Unified Aqua Utility Systems. The impacts of acquisitions and transitions are reflected throughout this narrative as explanations for the large variances from prior years. As a result, many of the explanations for the variances may seem redundant; however, each utility system of the FGUA operates independently. It is important, therefore, for the reader to understand that while the FGUA system, as a whole, was impacted by the transition activity; the explanations for the individual operations of the utility systems are more reflective of the traditional governmental utility operation.

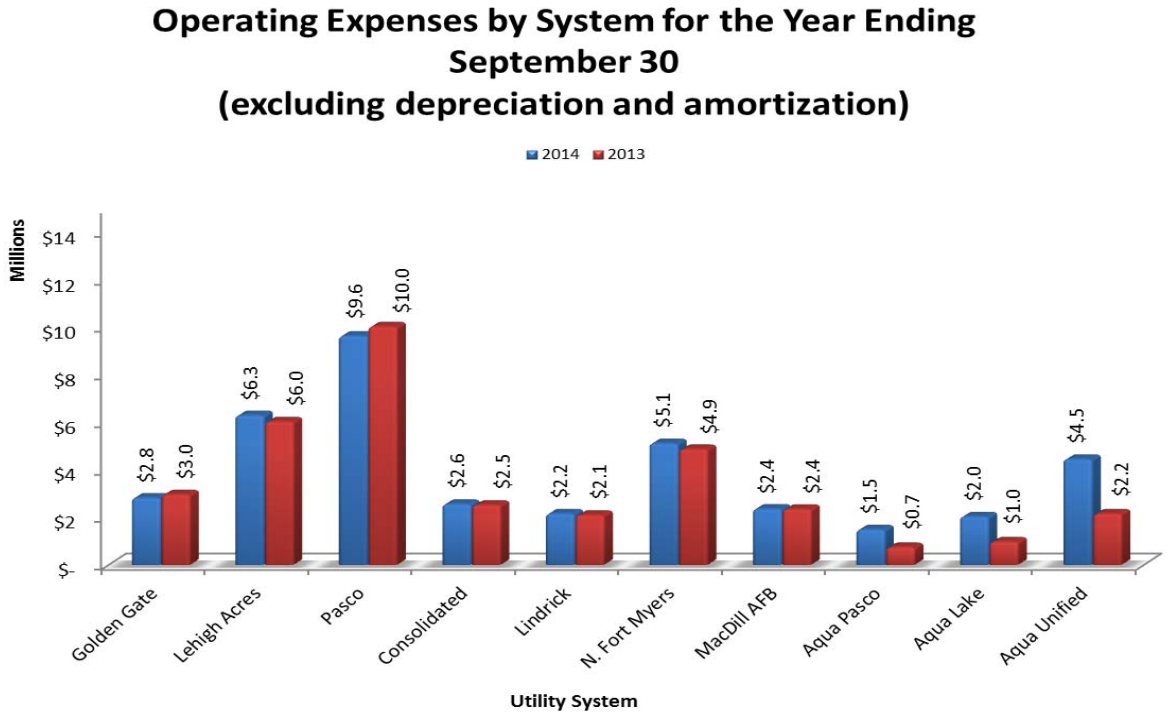
Operating revenues increased $9.0 million or 13% from $66.7 million in FY 2013 to $75.7 million in FY 2014.

- The Golden Gate Utility System realized an increase in operating revenues of $113,263 or 1.6% as compared to the prior year.
- The Lehigh Acres Utility System realized an increase in operating revenues of $188,175 or 1.4% as compared to the prior year.
- The Pasco Utility System realized an increase in operating revenues of $174,875 or 1% as compared to the prior year.
- The Consolidated Utility System realized an increase in operating revenues of $619,562 or 12.8% as compared to the prior year. This increase was primarily the result of a 3.25% rate increase combined with customer growth and billing inactive accounts found during the meter audit.
- The Lindrick Utility System realized a decrease in operating revenues of $48,690 or -1.1% as compared to the prior year. This decrease was primarily the result of the rate decrease that went into effect April 1, 2013.
- The North Fort Myers Utility System realized an increase in operating revenues of $591,544 or 6.6% as compared to the prior year. This increase was primarily the result of an 8% rate increase.
- The MacDill AFB Utility System operating revenues increased $130,835, or 3%, due to the annual CPI increase effective March 1 of each year and from additional revenues to provide temporary water at construction sites and for completing inspections of new connections on the base.
- The Lake Aqua, Pasco Aqua, and Unified Aqua Utility Systems contributed an additional $7.0 million in operating revenues. This is a 107.9% increase over the FY 2013 operating revenues. FY 2013 was for only 6 months of operations, as compared to a full twelve months of operations for FY 2014.



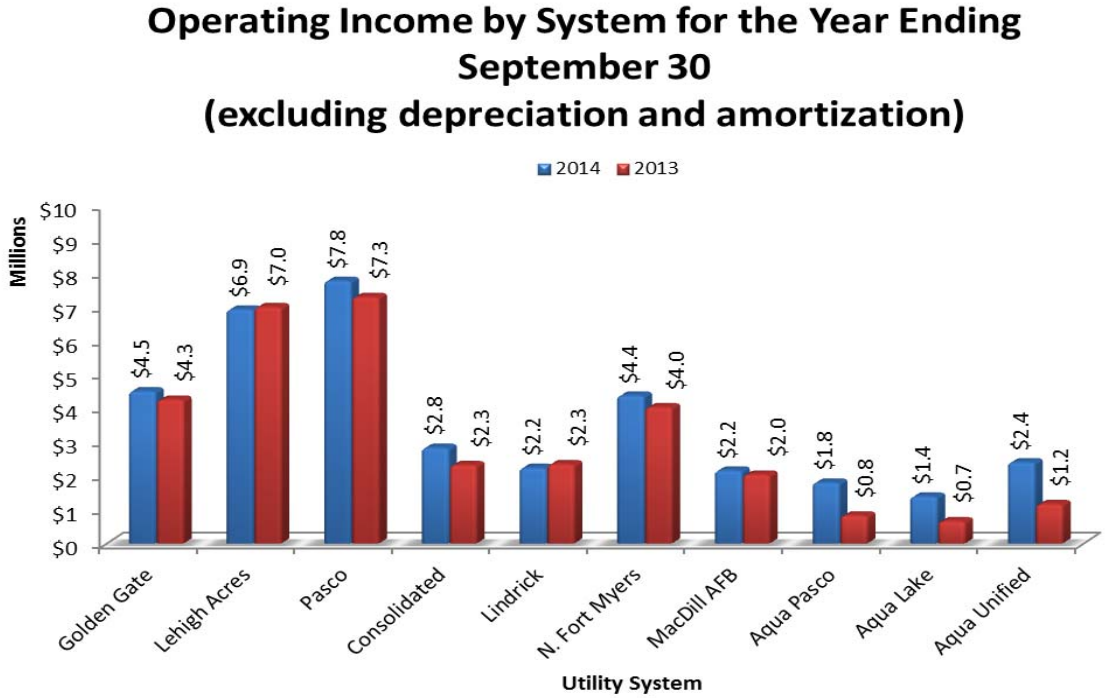
Operating expenses (excluding depreciation and amortization) increased by $4.2 million, or 12% from $34.8 million in FY 2013 to $39.0 million in FY 2014.

- The Golden Gate Utility System realized a decrease in operating expenses of $137,777 or -5% primarily as a result of lower general and administrative expenses.
- The Lehigh Acres Utility System realized an increase in operating expenses of $260,138 or 4% as a result of increase in the costs of chemicals to improve water quality.
- The Pasco Utility System realized a decrease in operating expenses of $396,310 or -4%. The decrease is attributed to lower purchased water expenses, as our water use permit was changed, allowing the FGUA to draw more raw water from the Florida Aquifer.
- The Consolidated Utility System realized an increase in operating expenses of $37,577 or 1%. The major source of increased expense is for new meter installations, which is related to the increase in new customers mentioned earlier.
- The Lindrick Utility System realized an increase in operating expenses of $59,591 or 3%. This increase was the result of a general inflationary increase in expenses.
- The North Fort Myers Utility System realized an increase in operating expenses of $245,901 or 5%. This increase was the result of increases in the management, operations and maintenance, and customer service and billing contracts.
- The MacDill AFB Utility System maintained operating expense due to a multi-year fixed contract with the contract operator and manager.
- The Aqua Pasco, Aqua Lake and Aqua Unified Utility Systems contributed to the FGUA's increase in operating expenses by $4,100,799, which is double the fiscal year 2013 expenses. These results align with expectations, as these systems were acquired March 28, 2013, resulting in only six months of expenses being recorded for FY 2013 versus a full twelve months for FY 2014.



Operating income, excluding depreciation and amortization expense increased by $4.6 million or 14.5% from $31.9 million in FY 2013 to $36.5 million in FY 2014.

- Golden Gate Utility System's operating income, excluding depreciation and amortization, increased $251,040 or nearly 6% primarily as the result of decreased other operating expenses.
- Lehigh Acres Utility System's operating income, excluding depreciation and amortization, decreased $71,963 or -1% because of the higher chemical costs incurred to improve water quality.
- Pasco Utility System's operating income, excluding depreciation and amortization, increased $571,185 or 8% as a result of lower purchased water costs.
- The Consolidated Utility System's operating income, excluding depreciation and amortization, increased $581,985 or 25% primarily as a result of the 3.25% rate increase, customer growth, and billing base fees to inactive accounts.
- The Lindrick Utility System's operating income, excluding depreciation and amortization, decreased $108,281 or -5% as a result of the rate decrease effective April 1, 2013 in conjunction with the inflationary increases in operating expenses.
- The North Fort Myers Utility System's operating income, excluding depreciation and amortization, increased by $345,643 or 9% as a result of rate increases and lower operating expenses. The debt service, however, has increased, resulting in a decrease in net position as described earlier.
- The MacDill AFB Utility System's operating income, excluding depreciation and amortization, increased 6% or $120,435 as the result of lower other operating expenses.
- The Aqua Pasco, Aqua Lake and Aqua Unified Utility System's operating income, excluding depreciation and amortization, increased from $2.6 million for FY 2013 to $5.6 million for FY 2014, or 110% as a result of realizing 12 months of activity (versus only 6 months in FY 2013).



CUSTOMERS

The following chart depicts the change in water and wastewater billed customers over the last two years. Consolidated experienced the most actual growth in customers billed with 267 new additions during FY 2014. The increases and decreases in customer numbers for all systems were primarily the outcome of an internal meter and billing audit. The large increases in customer numbers in the Aqua systems is because prior year customer counts did not include vacant (connected) homes.

	Water Customers				Wastewater Customers			
System	9/30/2014	9/30/2013	Growth	Percent Growth	9/30/2014	9/30/2013	Growth	Percent Growth

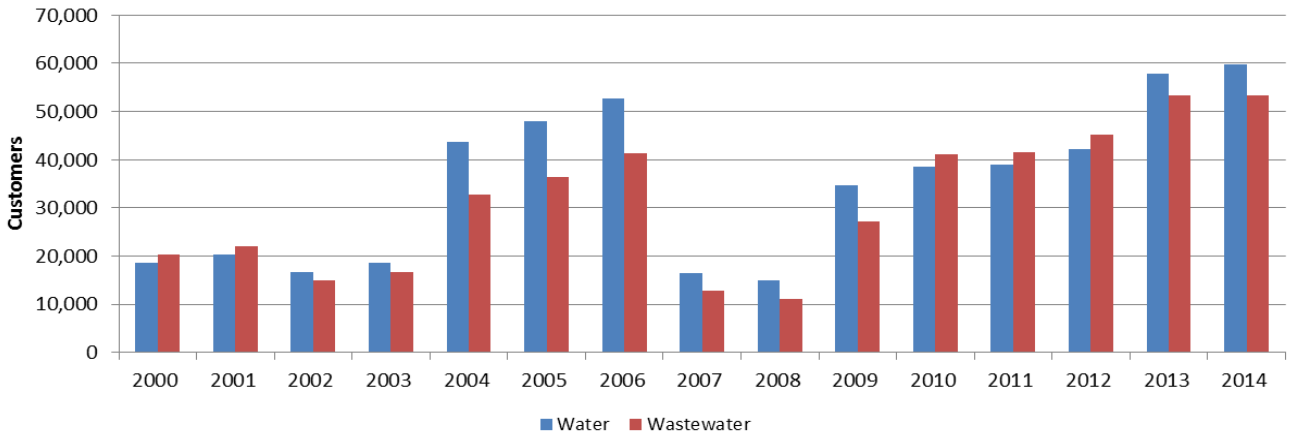
Note:
Reflects active customers on September 30

The following chart shows the overall growth of the FGUA since Fiscal Year 2000. While the individual utilities have traditionally experienced healthy growth in the customer base, acquisitions of new systems and transitioning of existing systems is reflected in the changes shown below. For example, the transition of the two largest of the four systems explains the significant decrease from 2006 to 2007. However, this chart does not reflect the actual increase in customers of the systems remaining at the end of 2007. The number of utility systems and the size of the customer base of the existing utility systems for a given year affect the upward and downward changes over this fifteen year period. Refer to the **Statistical Section** for additional information.

OVERALL GROWTH IN CUSTOMERS SINCE FY 2000



The FGUA is prohibited by Chapter 163, Florida Statutes from imposing property taxes. In addition, it is further prohibited from issuance of general obligation debt. It is, however, authorized to impose special assessments upon property owners, whose property will benefit from water and wastewater system improvements.

REQUESTS FOR INFORMATION

This financial report is designed to provide a general overview of the Florida Governmental Utility Authority's finances for all those with an interest in the government's finances. Questions concerning any of the information provided in this report or requests for additional financial information should be addressed to the FGUA Office of the Chief Financial Officer, 280 Wekiva Springs Road, Suite 2000, Longwood, FL 32779.

FLORIDA GOVERNMENTAL UTILITY AUTHORITY
STATEMENT OF CASH FLOWS
FOR THE YEAR ENDED SEPTEMBER 30, 2014

	Non-System Specific	Golden Gate Utility System	Lehigh Utility System	Barefoot Bay Utility System	Pasco Utility System
Cash flows from operating activities					
Cash received from customers, including customer deposits	$ 232,216	$ 7,442,548	$ 13,455,648	$ -	$ 18,299,362
Cash received from rental activities	-	1,809	10,012	-	117,992
Cash payments for contractual and other services	(29,964)	(3,000,748)	(6,708,984)	-	(9,585,559)
Net cash provided by operating activities	202,252	4,443,609	6,756,676	-	8,831,795
Cash flows from capital and related financing activities					
Principal paid on revenue bond and assessment note maturities	-	(1,077,154)	(35,187,619)	(475,000)	(1,765,000)
Interest paid on revenue bonds and assessment note	-	(1,741,598)	(3,045,473)	(593,994)	(7,266,835)
Build America Bond subsidy receipts on revenue bonds	-	-	-	-	2,352,397
Payments to acquire and construct plant property	-	(314,068)	(1,472,944)	-	(2,232,754)
Interfund loans	(19,846)	1,976	3,443	-	(1,505)
Impact fees and other capital contributions	-	34,115	105,747	-	184,698
Net cash used in capital and related financing activities	(19,846)	(3,096,729)	(39,596,846)	(1,068,994)	(8,728,999)
Cash flows from investing activities					
Proceeds from bond maturities	-	-	-	475,000	-
Sales (purchases) of investments	-	-	33,573,434	-	28,281
Interest received	473	838	61,655	593,994	125,612
Net cash provided by (used in) investing activities	473	838	33,635,089	1,068,994	153,893
Net increase (decrease) in cash and cash equivalents	182,879	1,347,718	794,919	-	256,689
Cash and cash equivalents, beginning of year	200,862	7,307,321	17,893,813	-	18,866,726
Cash and cash equivalents, end of year	$ 383,741	$ 8,655,039	$ 18,688,732	$ -	$ 19,123,415
Reconciliation of operating income to net cash provided by operating activities					
Cash flows from operating activities					
Operating income	$ 136,633	$ 2,282,729	$ 2,537,665	$ -	$ 4,035,157
Adjustments to reconcile operating income to net cash provided by operating activities:					
Miscellaneous nonoperating income	-	1,809	10,012	-	117,992
Depreciation and amortization expense	-	2,222,630	4,383,719	-	3,829,482
Changes in assets and liabilities					
Decrease (Increase) in accounts receivable	-	80,511	105,944	-	616,167
Decrease (Increase) in prepaid expenses	(8,907)	14,503	24,138	-	7,770
Increase (Decrease) in accounts payable and accrued expenses	74,526	(186,295)	(433,539)	-	55,023
Increase (Decrease) in customer deposits payable	-	27,722	128,737	-	170,204
Total adjustments	65,619	2,160,880	4,219,011	-	4,796,638
Net cash provided by operating activities	$ 202,252	$ 4,443,609	$ 6,756,676	$ -	$ 8,831,795
Supplemental schedule of noncash investing, capital, and financing activities					
Amortization of excess of cost over fair value of acquired assets	$ -	$ 452,324	$ 264,357	$ -	$ 1,835,926
Amortization of deferred loss on refunding	-	8,084	-	-	-
Bond discount (premium) amortization	-	(210,040)	(474,369)	-	5,788
Plant property contributed by developers	-	31,378	369,277	-	575,638

The accompanying notes to financial statements are an integral part of this statement.

(1) **Summary of Significant Accounting Policies:**

(a) **Reporting entity**—The Florida Governmental Utility Authority (the "Authority") was formed as a legal entity and public body pursuant to Chapters 125, 166 and 163, Florida Statutes and an Interlocal Agreement dated February 1, 1999 (the "Interlocal Agreement") initially by and between Brevard County, Lee County, Polk County, and Sarasota County (the "Authority Members"), each a local government located in the State of Florida. The Interlocal Agreement was amended and restated on December 1, 2000, by and between Citrus County, Nassau County, Polk County, and Sarasota County. Sarasota County was a member of the Interlocal Agreement, but withdrew effective August 29, 2002, after assuming ownership of the Authority's assets and liabilities related to the Sarasota Utility System. On January 16, 2003, Osceola County was accepted as a member. Osceola County has since terminated its membership and the Poinciana Utility System assets and liabilities were transferred to the Tohopekaliga Water Authority on April 30, 2007. The Citrus Utility System was transitioned to Citrus County on February 15, 2007. On October 15, 2005 Lee County rejoined the Authority subsequent to the purchase of the Lehigh Acres System. The Town of Dundee joined as a member on June 12, 2007 and subsequently withdrew on January 21, 2010. Hendry County joined as a member on February 21, 2008. Pasco County joined as a member on February 27, 2008. DeSoto County joined as a member on January 13, 2009. The purpose of the Authority is to enable the Authority Members to make the most efficient use of their common power to acquire, own, improve, operate, and maintain water and wastewater facilities. It is not expected that the Authority will have any employees. All services will be provided on a contractual basis.

The Authority has adopted Governmental Accounting Standards Board (GASB) Statement No. 61, *The Financial Reporting Entity: Omnibus*, for the purpose of evaluating its financial statements. Based on the criteria in Statement No. 61, the Authority has determined that there are no other units that meet the criteria for inclusion in the Authority's financial statements.

(b) **Measurement focus, basis of accounting, and financial statement presentation**—The accounting systems of the Authority are organized on the basis of funds, each of which is considered an accounting entity having a self-balancing set of accounts for recording its assets, deferred outflows, liabilities, deferred inflows, net position, revenues, and expenses. Since the Authority is a special purpose government involved solely in the provision of water and wastewater services to its customers on a fee basis, all funds are accounted for in Proprietary Funds.

The focus of proprietary fund measurement is the determination of net income, financial position, and cash flows. The proprietary funds are used to account for operations: (a) that are financed and operated in a manner similar to private business enterprises - where the intent of the governing body is that the costs (expenses, including depreciation) of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges; or (b) where the governing body has decided that periodic determination of revenue earned, expenses incurred, and/or net income is appropriate for capital maintenance, public policy, management control, accountability, or other purposes. The Authority operates ten utility systems (Golden Gate, Lehigh Acres, Pasco, Consolidated, Lindrick, North Fort Myers, MacDill AFB, Lake Aqua, Pasco Aqua, Unified Aqua) in ten separate funds. The Authority has one non-system specific fund that handles the administration of the interlocal agreements and also has a fund (Barefoot Bay) that services outstanding bonds from former utility systems the Authority operated years ago. All funds are considered major funds.

The Authority utilizes the accrual basis of accounting in accordance with the GASB Codification.

(1) **Summary of Significant Accounting Policies:** (Continued)

(c) **Cash and cash equivalents**—Cash and cash equivalents consists of cash on hand and on deposit in banks and money market accounts. Investments with a maturity of three months or less when purchased are considered to be cash equivalents.

(d) **Investments**—Investments are carried at fair value.

(e) **Accounts receivable**—The Authority's accounts receivable consists of amounts due from consumers. The Utility Systems perform credit evaluations on their consumers and generally require collateral deposits from them.

(f) **Restricted assets and reserves**—Certain assets are required to be segregated from other assets due to various bond indenture agreements. These assets are legally restricted for specific purposes such as debt service, construction, and renewals and replacements. The remaining excess of restricted assets over liabilities is reflected as restricted net position.

(g) **Property and plant**—Property and plant are recorded at cost less accumulated depreciation, except contributed assets which are recorded at fair value on the date of contribution. Expenditures of $5,000 or more are capitalized. Construction period interest cost, net of interest earned on the unexpended proceeds of tax-exempt borrowings, is capitalized as part of the asset cost. Depreciation, on a straight-line basis, is charged over estimated useful lives ranging from 5 to 35 years.

(h) **Intangibles**—The excess cost over fair value of acquired assets is being amortized, on a straight-line basis, over the approximate life of the related assets purchased, ranging from 20 to 30 years. The right of use capacity agreement for the Lindrick Utility System has an indefinite life.

(i) **Bond discounts and premiums**—Bond discounts and premiums are deferred and amortized over the term of the bonds using the effective interest method.

(j) **Revenue recognition**—Operating revenue consists primarily of charges for services, which are billed to customers for water, wastewater, and reclaimed water service. Billings are included in revenue as meters are read on a cycle basis throughout each month. Unbilled revenues are accrued based on estimated consumption of the most recent billing. For the MacDill AFB system, all water and wastewater revenues are earned based on the terms set forth in a formal agreement between the Authority and the Federal government.

(k) **Net position flow assumption**—Sometimes the Authority will fund outlays for a particular purpose from both restricted and unrestricted resources. In order to determine amounts reported as restricted and unrestricted net position, it is the Authority’s policy to consider restricted net position to have been used before unrestricted net position is applied.

(1) **Summary of Significant Accounting Policies:** (Continued)

(l) **Capital grants, contributions, and impact fees**—Impact fees are imposed by the Utility Systems to acquire, construct, equip, or expand the capacity of the water and/or wastewater facilities in order to serve new users of the facilities and new development within the service area of the Utility Systems. Impact fees revenue is recognized when the related connection services are performed. Capital contributions represent contributions of certain water distribution and wastewater collection systems. Such contributions are recognized as revenue in the period they are received. The recoverable portion of system purchase price is earned in the MacDill AFB System based on the terms set forth in the agreement with the Federal government. Capital grants represent funding from state and Federal agencies to support capital asset construction.

(m) **Operating and nonoperating revenues and expenses**—Operating revenues and expenses generally result from providing services and producing and delivering goods in connection with principal ongoing operations. The Authority's principal operating revenues are charges for water and sewer services. Operating expenses include the costs to maintain and repair the water and sewer treatment plants, administrative expenses, and depreciation on capital assets. All revenues and expenses not meeting this definition are reported as nonoperating revenues and expenses.

(n) **Deferred outflows/inflows of resources—**In addition to assets, the statement of financial position will, if required, report a separate section for deferred outflows of resources. This separate financial statement element, *deferred outflows of resources*, represents a consumption of net position that applies to a future period(s) and so will not be recognized as an outflow of resources (expense/expenditure) until then. It is the deferred loss on refunding. A deferred loss on refunding results from the difference in the carrying value of refunded debt and its reacquisition price. This amount is deferred and amortized over the shorter of the life of the refunded or refunding debt.

In addition to liabilities, the statement of financial position will, if required, report a separate section for deferred inflows of resources. This separate financial statement element, *deferred inflows of resources*, represents an acquisition of net position that applies to future period(s) and so will not be recognized as an inflow of resources (revenue) until that time. The Authority has no items that qualify for reporting in this category.

(o) **Use of estimates**—The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, and changes therein, and disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

(p) **Risk management**—The Authority participates in various insurance programs for property and casualty losses. Coverage includes property, general liability, and public officials insurance. Environmental impairment insurance for potential spills is maintained with Zurich Insurance. Settled claims have not exceeded insurance coverage during the last three fiscal years.

(2) **Purchase and Transition of Utility Systems:**

In recent years, the Authority has frequently been engaged in acquiring new utility systems, most recently acquiring the Lake Aqua, Pasco Aqua, and Unified Aqua systems in fiscal year 2013.

No such acquisitions or transitions occurred during the year ended September 30, 2014.

(3) **Sale of Utility Systems:**

(a) **Barefoot Bay utility system**—Effective February 2, 2000, Barefoot Bay Water and Sewer District (the "District"), a component unit of Brevard County, Florida, acquired all the assets and assumed all operating liabilities of the Barefoot Bay Utility System at net book value. This transaction resulted in a gain of approximately $250,000, equal to the accumulated deficit of the Barefoot Bay Utility System at the sale date. In payment for the Barefoot Bay Utility System, the District issued Barefoot Bay Water and Sewer District Utility Revenue Bonds Series 2000 (the "Series 2000 Bonds") in the amount of $17,135,000. The respective interest rates and maturities of the Series 2000 Bonds are identical to the Florida Governmental Utility Authority Utility System Revenue Bonds (Barefoot Bay Utility System), Series 1999 Bonds issued at the acquisition of the Barefoot Bay Utility System by the Authority and which remain outstanding. The trust estate as defined in the Series 2000 Bonds trust indenture secures the Series 2000 Bonds. This trust estate has replaced the net revenues of the Barefoot Bay Utility System as the pledged revenue source securing the Series 1999 Bonds. The Series 2000 Bonds are included in restricted assets in the combined Statement of Net Position of the Authority.

(b) **Citrus utility system**—Effective February 15, 2007, Citrus County acquired all the assets and assumed all operating liabilities of the Citrus System at net book value. This transaction resulted in a loss of $14,172,385. At September 30, 2014, the Authority had $17,345,000 of defeased bonds outstanding.

(c) **Poinciana utility system**—Effective April 30, 2007, the Tohopekaliga Water Authority acquired all the assets and assumed all operating liabilities of the Poinciana System at net book value. This transaction resulted in a loss of $66,695,896. At September 30, 2014, the Authority had $33,150,000 of defeased bonds outstanding.

(4) Deposits and Investments:

(a) **Deposits**—At September 30, 2014, the carrying amount of the Authority's cash on deposit in its bank account was $3,976,978 and the related bank balance was $4,320,036. In addition to insurance provided by the Federal Depository Insurance Corporation, deposits are held in banking institutions approved by the State Treasurer of the State of Florida to hold public funds. Under Florida Statutes Chapter 280, Florida Security for Public Deposits Act, the State Treasurer requires all Florida qualified public depositories to deposit with the Treasurer or another banking institution eligible collateral. In the event of failure of a qualified public depository, the remaining public depositories would be responsible for covering any resulting losses. The Authority's deposits at year end are considered insured for custodial credit risk purposes.

(b) **Investments**—At September 30, 2014, the Authority's investments consisted of the following:

Types of Investments	Maturities	Credit Quality (Moody's)	Fair Value
Investments			
Municipal bonds receivable	16	N/A	$ 11,990,000
Municipal bonds	3.16	Aaa-Aa3	6,588,536
Money market mutual funds	N/A	N/A	83,835,256
Total investments			102,413,792
Cash on deposit			3,976,978
Total cash and investments (unrestricted and restricted)			$ 106,390,770

(c) **Custodial credit risk**—For an investment, custodial credit is the risk that, in the event of the failure of the counterparty, the Authority will not be able to recover the value of its investments or collateral securities that are in the possession of an outside party. In order to manage the custodial credit risk, the Authority's investment policy specifies certain requirements to pre-qualify financial institutions and brokers/dealers and an annual review of the institutions used.

(d) **Credit risk**—Credit risk is the risk that an issuer or other counter party to an investment will not fulfill its obligations. The Authority does have a formal investment policy that limits its investments to high quality investments to control credit risk, which requires diversification of investments, limited investments in securities with higher credit risks, investing in securities with varying maturities, and continuously investing a portion of the portfolio in readily available funds such as local government investment pools or money market funds. In addition, Certificates of deposit and other evidences of deposit at qualified depositories, bankers' acceptances, and commercial paper, rated in the highest tier (e.g., A-I, P-I, F-I or D-1 or higher) by a nationally recognized rating agency. The municipal bonds receivable and money market mutual funds do not have credit quality ratings. The municipal bonds receivable are insured by a financial guaranty insurance policy.

(e) **Interest rate risk—**Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment. The Authority has a formal investment policy that, except for special situations, limits investment maturities to instruments maturing within three years from purchase as a means of managing exposure to fair value losses arising from increasing interest rates. At September 30, 2014, the Plan's municipal bonds had a weighted average duration of 3.16 years.

(5) **Accounts Receivable:**

(d) **Bond issuances**—During the year ended September 30, 2014, there were no new debt issuances.

See Note 10 to the financial statements for debt issuances subsequent to year-end.

(8) **Commitments and Contingencies:**

(a) **U.S. Water/Wade Trim, LLC**—Contracted to perform water treatment, water distribution, wastewater treatment, wastewater disposal and control, and other related services for all utility systems of the Authority. With the exception of Golden Gate and Lehigh Acres, both of which had contract effective dates of October 1, 2011, the contract terms started on the effective date of the acquisitions of each system, and expire on varying dates from September 30, 2015 to September 30, 2019.

U.S. Water receives an annual fixed fee for services provided to the systems of $23,659,705, paid in monthly installments. Fees in future years are adjusted as defined in the Operations and Billing Contract. The Operations and Billing Contract also provides for additional payments to U.S. Water for renewals and replacements and for capital improvements. Such additional payments are to be at U.S. Water's cost plus a specified profit percentage. Total amounts paid to U.S. Water for the year ended September 30, 2014 for all services were $35,689,578. At September 30, 2014, amounts payable to U.S. Water totaled $4,889,274.

(b) **Government Services Group, Inc.**—In order to execute the powers of the Authority pursuant to the Interlocal Agreement and the responsibilities of the Authority, the Authority retained Government Services Group, Inc. (GSG), a private contractor, for the overall management of the Authority. The Management Services Agreement between the Authority and GSG defines the general functions GSG will carry out and expires September 30, 2020, with the exception of the agreement defining functions relating to the MacDill AFB System, which expires September 30, 2021. The Authority has the option to extend the term of the Management Services Agreement. GSG receives an annual base fixed fee for general administrative services provided to the Authority of $3,432,917, as well as an annual based fixed fee for capital improvement program administrative fees of $1,142,341. Additional payments are made for other services approved by the Authority's Board of Directors. Total amounts paid to GSG for the year ended September 30, 2014 were $5,718,841. At September 30, 2014, amounts payable to GSG totaled $106,896.

(c) **Contracts**—Commitments on outstanding contracts for improvements and maintenance of the Utility Systems totaled $241,632 at September 30, 2014.

(d) **Other pending litigation**—The Utility Systems are contingently liable with respect to regulatory inquiries and other claims incidental to the ordinary course of its operations. In the opinion of management, based on the advice of legal counsel, the ultimate disposition of these regulatory inquiries and claims will not have a material adverse effect on the financial position or results of operations of the Utility Systems.

(9) **Related Party Transactions:**

Prior to December 31, 2001, Government Services Group, Inc. (GSG) was partially owned by Nabors, Giblin & Nickerson, P.A., (NGN) which is serving as Bond Counsel with respect to the Series 2012, 2010, 2009, 2005, 2003, 2002, 2001, 2000 and 1999 Bonds and Special Authority Counsel of each of the Utility Systems. This direct interest ended through a buyout of NGN shares by GSG.

(10) **Subsequent Events:**

(a) **Lehigh Acres Utility System Series 2014 Refunding Revenue Bonds**—On September 18, 2014 the Authority Board of Directors authorized the issuance of the Series 2014 Utility Refunding Revenue Bonds for the Lehigh Acres Utility System in the amount of $20,625,000 and due October 1, 2035. The bonds were issued on November 13, 2014. Interest will compound monthly on a 30/360 basis. Payments on interest are due semi-annually, beginning on April 1, 2015, at rates ranging from 2.000% to 5.000%. Principal payments in varying amounts are due annually on October 1, 2016 through 2035. The Purpose of the Revenue Bonds is to refund the Lehigh Acres Utility System Series 2005 Revenue Bonds.

Statistical Section

STATISTICAL SECTION

This part of the Florida Governmental Utility Authority's comprehensive annual financial report presents detailed information as a context for understanding what the information in the financial statements, note disclosures, and required supplementary information says about the government's overall financial health. In some instances, data is not available for all years. In future financial statements, we will add the current year plus continue to report on the years reflected in these schedules until a full ten years of data is presented.

Contents **Page**

Financial Trends
These schedules contain trend information to help the reader understand how the government's financial performance and well-being have changed over time
- Net Position by Component 69
- Changes in Net Position 70
- Summary of Ten Largest Single Water Users 71

Debt Capacity
These schedules present information to help the reader assess the affordability of the government's current levels of outstanding debt and the government's ability to issue additional debt in the future.
- Ratios of Outstanding Debt by Fund Type 72
- Pledged Revenue Coverage 73 – 74

Demographic and Economic Information
These schedules offer demographic and economic indicators to help the reader understand the environment within which the government's financial activities take place.
- Demographic and Economic Statistics 75 – 76
- Principal Employers 77

Operating Information
These schedules contain service and infrastructure data to help the reader understand how the information in the government's financial report relates to the services the government provides and the activities it performs.
- Operating Indicators by Function 78
- Capital Asset Statistics by Function 79 – 81

Sources: Unless otherwise noted, the information in these schedules is derived from the comprehensive annual financial reports for the relevant year.

Total primary government	**$ 24,057,420**	**$ 24,856,726**	**$ (63,772,707)**	**$ 1,488,073**	**$ (1,417,659)**	**$ 3,448,969**	**$ 9,981,713**	**$ 8,875,357**	**$ 5,717,602**	**$ 9,364,475**

Note (1): Depreciation and amortization for system assets and goodwill.

Note (2): The Loss on sale of system amount under the Expenses section represents the net asset value of those systems that transitioned from FGUA ownship.

Note (3): Water and wastewater revenue is net of bad debt.

Note (4): The change in Net Position during fiscal year 2007 is the result of the transition of the Poinciana and Citrus Utility systems to their local governmental authorities

Florida Governmental Utility Authority
Ratios of Outstanding Debt by Type (1)
Last Ten Fiscal Years
(amounts expressed in whole dollars)

Fiscal Year	Business-Type Activities			Total Primary Government	Percentage of Personal Income	Per Utility Customer
	Water & Wastewater Bonds	General Obligation Bonds	Capital Leases			
2005	$ 191,445,482	-	-	$ 191,445,482	na	$ 4,541
2006	225,466,429	-	-	225,466,429	na	4,797
2007 (1)	145,239,428	-	-	145,239,428	na	9,946
2008	143,294,162	-	-	143,294,162	na	9,729
2009	252,014,267	-	-	252,014,267	na	4,295
2010	341,518,994	-	-	341,518,994	na	4,290
2011 (2)	332,432,943	-	-	332,432,943	na	4,137
2012 (2)	351,269,540	-	-	351,269,540	na	4,029
2013 (2)	447,217,820	-	1,586,568	448,804,388	na	4,124
2014 (2)	407,023,434	-	1,427,343	408,450,777	na	3,603

Note: (1) During Fiscal Year 2007, the transition of the Poinciana and Citrus Utility systems to their local governmental authorities caused the overall increase in the Per Utility Customer Costs. These systems accounted for the majority of the total customer count for the combined FGUA Systems.

(2) This amount excludes the Barefoot Bay bonds, as the FGUA no longer owns or operates this system. The Barefoot Bay debt service is fully funded by the new owners and the FGUA acts as a pass-through agent only. In addition, we are also excluding the Seller-financed note associated with the MacDill AFB purchase because the AFB is considered one customer, and the Federal Government subsidizes the debt service.

Notes: (1) Includes revenue from the sale of water and wastewater, meter tapping, service charges, and miscellaneous operating revenue. Also includes funds contributed from Capitalized Interest Accounts and Rate Stabilization Accounts in accordance with Bond documents. Excludes water and wastewater impact fee revenue and special assessments.

(2) Excludes depreciation and amortization expenses.

(3) In Fiscal Year 2007, these Systems were transitioned to their local governmental authorities. The bonds were defeased.

(4) These Systems were sold, but the debt, along with the funds to pay the annual debt service requirements, are still shown on the FGUA Financial Statements. The amounts in the Revenue (Note 1) column reflect the restricted funds used to pay the annual debt service requirement.

(5) The Pasco Systems includes the Aloha Gardens and Seven Springs service areas. This system was purchased on February 27, 2009 and issued $106,710,000 in debt for the acquistion.

(6) The FGUA purchased the Consolidated Systems, the Lindrick Utility Systems and the North Fort Myers Utility Systems during FY 2010 and Issued debt for $5,124,000, $24,665,000, and $62,440,000 respectively for these aquisitions.

(7) The FGUA Purhchased the MacDill AFB water and wastewater system during FY 2010. In lieu of the issuance of debt, the Authority will amortize the purchase price over the subsequent 20 year period. The Debt Service is described as a seller-financed note.

+ Wastewater treatment provided by Hillsborough County, Florida
++Wastewater treatment provided by City of New Port Richey (0.850 MGD)
+++Wastewater treatment provided by Pasco county, Florida
(1) The Citrus System was transitioned to Citrus County on February 15, 2007
(2) The Poinciana System was transitioned to the Tohopekaliga Water Authority on April 30, 2007
(3) The Aloha Gardens and Seven Springs service areas are combined for Financial reporting purposes and called the Pasco Utility Systms.
(4) The Consolidated System is compprised of thirteen small service areas.
(5) The North Fort Myers wastewater treatment is comprised of 2 treatment plants: Lk Fairways (0.145 MGD) & Del Prado (1.722 MGD
(6) Flows reported for Lk Fairways only
(7) Flows reported for Linda Lakes WWTP only

INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

To the Board of Directors,
Florida Governmental Utility Authority:

We have audited, in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in the *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of the business-type activities and each major fund of Florida Governmental Utility Authority (the Authority) as of and for the year ended September 30, 2014, and the related notes to the financial statements, which collectively comprise the Authority's basic financial statements, and have issued our report thereon dated March 9, 2015.

Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered the Authority's internal control over financial reporting (internal control) to determine audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the Authority's internal control. Accordingly, we do not express an opinion on the effectiveness of the Authority's internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis. A *material weakness* is a deficiency, or combination of deficiencies, in internal control such that there is a reasonable possibility that a material misstatement of the Authority's financial statements will not be prevented, or detected and corrected on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over financial reporting was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over financial reporting that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control over financial reporting that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified. We did identify a certain deficiency in internal control, described below as comment 2014-001, that we consider to be a significant deficiency.

2014-001 – Tracking and Recording of Construction in Progress – MacDill Fund

During our audit, we noted a variety of adjustments were required to correct the MacDill AFB System capital asset and related balances. These items included: $120,000 of capitalized interested identified on the construction-in-progress (CIP) analysis but not recorded and $140,000 of additional capitalized interest not properly identified on the CIP analysis. We recommend all CIP schedules be reconciled on a periodic basis and, if applicable, updated to match the final audited balances as part of the reconciliation process.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the Authority's financial statements are free of material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Florida Governmental Utility Authority's Response to Findings

The Authority's response to the findings identified in our audit is described in the accompanying response as identified in the table of contents. The Authority's response was not subjected to the auditing procedures applied in the audit of the financial statements and, accordingly, we express no opinion on it.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

Honorable Chairman and Members
Board of Directors
Florida Governmental Utility Authority
1500 Mahan Drive, Suite 250
Tallahassee, FL 32308

The Florida Governmental Utility Authority continues to improve its financial performance. No material weaknesses of internal controls were identified. There was one audit deficiency that was identified in fiscal year 2014 as described below. Staff continues to review areas of improvement and document policies and procedures that ensure proper controls are in place to reduce the chance of errors. New procedures should prevent the likelihood of future findings.

The following auditor finding and management response is provided:

2014-001 – Tracking and Recording of Construction in Progress (CIP) – MacDill Fund

RECOMMENDATION: We recommend all CIP schedules be reconciled on a periodic basis and, if applicable, updated to match the final audited balances as part of the reconciliation process.

MANAGEMENT RESPONSE: Concur. Management has implemented a year-end review of all accounts, including CIP schedules and final audited balances as part of the reconciliation process.

We continue to strive to provide the highest level of financial services to the Florida Governmental Utility Authority.

Respectfully submitted,

Robert E. Sheets
System Manager

David M. DiLena, CPA
