FLORIDA GOVERNMENTAL UTILITY AUTHORITY
COMPREHENSIVE ANNUAL FINANCIAL REPORT
FOR THE FISCAL YEAR ENDED SEPTEMBER 30, 2017

TABLE OF CONTENTS

	Page Number(s)
INTRODUCTORY SECTION	
Letter of Transmittal	1 – 25
Certificate of Achievement for Excellence in Financial Reporting	26
Organization Chart	27
List of Principal Officials	28
FINANCIAL SECTION	
Independent Auditors' Report	29 – 30
Management's Discussion and Analysis	31 – 43
Basic Financial Statements	
Statement of Net Position	44 – 45
Statement of Revenues, Expenditures, and Changes in Net Position	46 – 47
Statement of Cash Flows	48 – 49
Notes to Financial Statements	50 – 68
STATISTICAL SECTION	
Net Position by Component	70
Changes in Net Position	71
Summary of Ten Largest Single Water Users	72
Ratios of Outstanding Debt by Fund Type	73
Pledged Revenue Coverage	74 – 75
Demographic and Economic Statistics	76 – 77
Principal Employers	78
Operating Indicators by Function	79
Capital Asset Statistics by Function	80 – 81
OTHER REPORTS	
Independent Auditors' Report on Internal Control Over Financial Reporting and on Compliance and Other Matters Based on an Audit of Financial Statements Performed in Accordance with *Government Auditing Standards*	82 – 83

March 12, 2018

Chairman and Members, Board of Directors
Florida Governmental Utility Authority
1500 Mahan Drive, Suite 250
Tallahassee, FL 32308

Florida State law requires that all units of local government publish a complete set of financial statements presented in conformity with generally accepted accounting principles (GAAP) and audited in accordance with generally accepted auditing standards by a firm of licensed certified public accountants. Pursuant to that requirement, the Comprehensive Annual Financial Report of the Florida Governmental Utility Authority (FGUA) for the fiscal year ended September 30, 2017 is hereby submitted. Responsibility for both the accuracy of the data and the completeness and fairness of the presentation, including all disclosures, rests with the management of the FGUA. To the best of our knowledge and belief, the enclosed data is accurate in all material respects and is reported in a manner designed to present fairly the financial position and results of operations of the FGUA. All disclosures necessary to enable the reader to gain an understanding of the FGUA's financial activities have been included.

The Florida Governmental Utility Authority's financial statements have been audited by James Moore & Co. P.L., a firm of licensed certified public accountants. The goal of the independent audit was to provide reasonable assurance that the financial statements of the Florida Governmental Utility Authority for the fiscal year ended September 30, 2017, are free of material misstatement. The independent audit involved examining on a test basis, evidence supporting the amounts and disclosures in the financial statements; assessing the accounting principles used and significant estimates made by management; and evaluating the overall financial statement presentation. The independent auditor concluded, based on the audit, that there was a reasonable basis for rendering an unqualified ("clean") opinion that the Florida Governmental Utility Authority's financial statements for the Fiscal Year ended September 30, 2017, are fairly presented in conformance with GAAP. The independent auditor's report is presented as the first component of the financial section of this report.

GAAP requires that management provide a narrative introduction, overview, and analysis to accompany the basic financial statements in the form of Management's Discussion and Analysis (MD&A). This letter of transmittal is designed to complement the MD&A and should be read in conjunction with it.

The Florida Governmental Utility Authority's MD&A can be found immediately following the report of the independent auditors.

Profile of the Government

The FGUA exists as a legal entity and public body pursuant to Chapters 125, 163 and 166, Florida Statutes, and a First Amended and Restated Interlocal Agreement dated as of December 1, 2000, as restated, amended and supplemented from time to time (the "Interlocal Agreement") by and among various local governments located in the State of Florida. Citrus, Nassau, Polk and Sarasota counties were the original member governments. Sarasota County and Nassau County have since terminated their membership in the Authority. Osceola County joined as a member in 2003 and has since terminated its membership in the Authority. Lee County joined as a member on October 18, 2005, Pasco County joined as a member on February 27, 2008, Hendry County joined as a member on February 21, 2008, and Marion County joined as a member on November 21, 2013. The Town of Dundee joined as a member on June 12, 2007 and has since terminated membership in the Authority. Desoto County joined as a member on February 19, 2009 and terminated its membership in November 2015. Citrus County, Hendry County, Lee County, Pasco County, Polk County and Marion County are the current counties who are Members in the FGUA.

The purpose of the FGUA is to enable its members to make the most efficient use of their common power to acquire, own, improve, operate, and maintain water and wastewater facilities. Authority membership is not a prerequisite to the acquisition of property within any particular jurisdiction. As of September 30, 2017, the FGUA manages and operates 87 water systems and 32 wastewater systems located in fourteen counties in Florida. These systems are accounted for in ten separate enterprise funds, each with their own revenue bonds.

The FGUA does not have any employees. All services are provided on a contractual basis predicated on the management and operational needs of the FGUA. Overall management (including executive oversight, administration, financial management, capital planning, and construction contract supervision) is provided by Government Services Group, Inc. Daily operations, maintenance, customer service, and billing services are provided by US Water/Wade Trim, with the exception of services at MacDill AFB Utility System which are provided by US Water Services Corporation.

The FGUA began its operational and fiscal activities on the date of acquisition of five water and wastewater systems on April 15, 1999. These systems were acquired from Florida Cities Water Company and Poinciana Utilities, Inc., units of Avatar Properties, Inc. A sixth system located in Lee County was part of the acquisition discussions, but was directly purchased by Lee County on April 15, 1999. The Barefoot Bay Utility System was transferred to Brevard County in February 2000. The Sarasota Utility System was transferred to Sarasota County on August 8, 2002. On December 5, 2003, the FGUA completed the purchase of two additional utility systems from Florida Water Services Corporation, the Citrus County Utility System and the Lehigh Acres Utility System (Lee County). On March 31, 2004, the FGUA sold its Carrollwood Utility System water production wells to the Tampa Bay Water Authority and its water distribution system and wastewater collection system to Hillsborough County, ending its ownership in the Carrollwood Utility System. Continuing with the FGUA's practice to transition utility activities from the private sector to public ownership and operation, the Citrus Utility System was transitioned to Citrus County on February 15, 2007. Shortly thereafter, on April 30, 2007, the Poinciana Utility System was transitioned to the Tohopekaliga Water Authority. On February 27, 2009, the FGUA purchased the Aloha Utilities Inc. water and wastewater systems (Aloha Gardens and Seven Springs), collectively called the FGUA Pasco Utility Systems. On December 23, 2009, the FGUA acquired the Consolidated Utility Systems. On March 10, 2010, the FGUA acquired the Lindrick Utility System and on July 29, 2010, the FGUA acquired the North Fort Myers Utility System. On June 17, 2010, the Authority accepted and approved a contract with the United States Government for the acquisition of the water and wastewater utility facilities at MacDill Air Force Base (AFB). The effective date of this acquisition was March 1, 2011, after the transition period which ended February 28, 2011. On June 28,

2012, the FGUA acquired the Mad Hatter and Paradise Lakes Utility Systems which are located in Pasco County, and combined them into the FGUA's Consolidated Utility Systems enterprise fund. On March 28, 2013, the FGUA acquired certain water and wastewater utility assets owned by Aqua Utilities Florida, Inc. and Crystal River Utilities, Inc. located in Pasco, Lake, Alachua, Citrus, Hardee, Lee, Marion, Orange, Polk, Seminole, Volusia and Putnam Counties, Florida. These system were separated into three separate enterprise funds; Lake Aqua Utility System, Pasco Aqua Utility System, and Unified Aqua Utility System. As of September 30, 2017, the FGUA consisted of ten separate water and wastewater systems located in fourteen counties in Florida. Each of the systems is accounted for as a separate enterprise fund of the FGUA. The Barefoot Bay Utility System was conveyed to Brevard County on February 2, 2000, however, the FGUA continues to maintain a separate enterprise fund for the Barefoot Bay Utility System as the FGUA's 1999 bond series was not legally defeased on this acquisition date. The Barefoot Bay Enterprise fund reports the annual receivables due from Brevard County which are used to continue payment to holders of the 1999 FGUA Barefoot Bay Utility System Revenue bonds. There is also a Non-System Specific enterprise fund for the other minor contractual services provided by the FGUA.

GOLDEN GATE UTILITY SYSTEM

SERVICE AREA

Golden Gate is located north and east of I-75 between the Golden Gate main canal and CR 951, approximately four miles east of the city of Naples in western Collier County. Golden Gate occupies just more than four square miles of developed urban residential and light-commercial property.

The majority of properties are single-family residential. Commercial development consists of support services to the surrounding residents. The Collier County Water-Sewer District surrounds the Golden Gate system on all sides.

Approximately half of the Golden Gate service area is served with public water service, while less than half of Golden Gate is served by central sewer. Those residents who are currently not connected use private wells and septic tanks. The oldest water and sewer lines were installed in 1964.

Half of the southeast quarter of the Golden Gate service area is comprised of a golf course, to which water and sewer service is provided and on which a water treatment plant is located. The remaining area in the southeast quarter is served with water and sewer. The FGUA continues to expand water service to locations in this area since additional water treatment capacity is available.

SYSTEM OPERATIONS

Water Treatment

The original water plant, constructed in 1965 and 1966, was a metal lime-softening treatment plant. This facility was expanded in 1989 to a lime-softening plant capacity of 1.224 MGD. In July 2000, a 0.25-MGD reverse osmosis (RO) system was put on line at the existing water treatment plant site. In 2004, a 0.250 MGD - RO system was put on line for a total treatment capacity of 1.70 MGD. In 2006 a phase 3 - RO system of 0.300 MGD was put on line. In 2009 TUB was converted from a 0.504 MGD lime softening unit into a raw water blend. The total production capacity of the Golden Gate system is now 2.099 MGD (0.720 MGD lime softening, 0.504 MGD raw blend and 0.875 MGD RO).

As shown in Table 1, plant flows averaged 1.516 MGD in fiscal year 2017 – 72% of the plant capacity.

Table1 – Golden Gate Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Golden Gate – WUP Limit (Water Table Aquifer)	2.060	1.772 (raw)	86%
Golden Gate – Treatment Capacity	2.099	1.505	72%

Wastewater Treatment

The wastewater treatment plant, which is located next to the Golden Gate canal, is a 1.50 MGD annual average daily flow conventional activated sludge domestic WWTP with effluent disposal to on-site percolation ponds and a deep injection well. The original plant was constructed in 1966 with a capacity of 0.3 MGD and was upgraded to 0.4 MGD in the 1980s and then again in 1995 to 0.95 MGD and in 2009 to its current capacity of 1.50 MGD AADF & 1.80 MGD TMADF.

The annual average daily flow was 1.079 MGD in fiscal year 2017 – 75% of the plant capacity. Plant flow slightly increased in the latter part of the fiscal year, reflecting concerns with infiltration and inflow to the system during wet weather. Inflow and infiltration investigations are a continuous effort to address infiltration and inflow in the Golden Gate system and are budgeted for yearly.

Table 2 – Golden Gate Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Three Month ADF (MGD)	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Totals	1.80	1.342	1.50	1.079	75%

The utility system served a total of 3,681 water customers and 2,283 wastewater customers in fiscal year 2017.

LEHIGH ACRES UTILITY SYSTEM

SERVICE AREA

Lehigh Acres is in the Eastern portion of Lee County, Florida, located east of State Road 82 and south of State Road 80. Fort Myers is the largest population center located due west of Lehigh Acres. Lehigh Acres occupies approximately 94.9 square miles of developed residential and light commercial property. The majority of properties are zoned single family residential. Duplex residential and light commercial properties are located along the main roadways. Originally designed as a retirement community, Lehigh Acres has grown in population to over 86,784 full and seasonal residents according to the 2010 US Census. Less than 50 percent of Lehigh Acres is served by public water service, with 38 percent served by central wastewater service. The Florida Governmental Utility Authority has utility service primarily along three major roadway corridors, Lee Boulevard running east and west, Homestead Road running southwest and Joel Boulevard running north and south. Both old and new planned neighborhoods are scattered along these roadways and typically have water and wastewater service.

SYSTEM OPERATIONS

Water Treatment

The FGUA operates one (1) 3.10 MGD lime softening water treatment plant (WTP No. 1) that includes thirteen (13) raw water wells that supply all water to the Lehigh Acres Utility System. This supply can be supplemented if needed by an interconnect with the city of Fort Myers. There are two (2) onsite storage tanks, one (1) 1.0 million gallon and one (1) 0.5 million gallon ground storage tanks and two (2) offsite storage tanks including one (1) elevated tank with a capacity of 0.25 million gallons and one (1) ground storage tank with a capacity of 0.5 million gallons.

Due to high levels of total dissolved solids from the wells associated with WTP No. 2 FGUA completed the conversion of WTP No. 2 to a Booster Station in FY 2013. WTP No. 2 includes a 2.0 MG onsite storage tank. WTP No. 2 now receives all water from WTP No. 1, Chlorine and Ammonia residuals are adjusted at WTP No. 2 to ensure adequate treatment is provided for the water that is sent to the Southern portion of the Lehigh Acres service area.

Eventually when growth resumes in Lehigh Acres, WTP No. 2 will be modified to include Reverse Osmosis Treatment. Plans call for WTP No. 2 to eventually be expanded to 10.0 MGD and will provide for all future growth in Lehigh Acres. For the time being until growth resumes WTP No. 2 will be operated as a booster station.

Table 3– Lehigh Acres Water Treatment Plant Flows

	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
WUP Limit	3.150	2.330	74%
Treatment Capacity	3.100	2.330	75%

Conversion of WTP No. 2 to a booster station was completed in fiscal year 2013 and the permitted treatment capacity was reduced from 4.10 to 3.10 MGD. This treatment capacity can be supplemented if needed via the City of Fort Myers interconnect.

Wastewater Treatment

The FGUA operates one wastewater treatment plant (WWTP) with a permitted capacity of 3.0 MGD AADF & 4.30 MGD TMADF. The WWTP also includes a deep injection well (DIW) with a permitted disposal capacity of 18.6 MGD which will allow for all future expansions of the WWTP. The plant is comprised of three (3) separate contact stabilization plants. The Zenon membrane plant was demolished during FY 2015 as part of the Headworks Capital Improvement Project. The WWTP produces public access quality reclaimed water that is used for irrigation on three area golf courses. During periods of wet weather the effluent is diverted to extensive onsite ponds for storage, percolation and evaporation. The DIW is also used for effluent disposal during wet weather.

Table 4– Lehigh Acres Wastewater Treatment Plant Flows

	Permitted Capacity (MGD) TMADF	Three Month ADF (MGD)	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity AADF
WWTP	4.30	2.648	3.00	1.955	65%

The customer service center provided utility billing and other services to 12,705 water and reuse customers and 10,475 wastewater customers in 2017.

PASCO UTILITY SYSTEM – ALOHA GARDENS & SEVEN SPRINGS

SERVICE AREA

The physical facilities of the Pasco Utility System are located in two distinct service areas, the Aloha Gardens service area and the Seven Springs service area. The Pasco Utility systems are located in Pasco County, immediately north of Pinellas and Hillsborough Counties, with the Aloha Gardens service area west of U.S. Highway 19 and the Seven Springs service area to the east of U.S. Highway 19.

The Aloha Gardens water system consists of three water treatment plants, plants 1, 3 and 8; although at present only WTP No. 8 is in service. The Aloha Gardens system receives additional water purchased from Pasco County through three interconnects with the County Utility system. Wastewater from the Aloha Gardens service area is sent to Pasco County for treatment through a bulk service agreement. Since the Aloha Gardens service area is built out, the agreement is sufficient for future wastewater treatment needs of this area.

The Seven Springs water system consists of one centralized WTP with a permitted treatment capacity of 2.90 MGD and includes 7 permitted wells. The Seven Springs water system is also interconnected with Pasco County and is required to purchase all water needed above the 2.289 MGD AADF WUP raw water withdrawal limitation. The Seven Springs wastewater treatment plant is permitted at 2.50 MGD and is currently operating within its permitted capacity.

Aloha Gardens Water Treatment

The Aloha Gardens water system consists of one active WTP (#8). The Aloha Gardens system receives additional water purchased from Pasco County through three interconnects with the County Utility system.

As shown in Table 5, Aloha Gardens flows averaged 0.422 MGD in FY 2017. The majority of water used in the Aloha Gardens service area was purchased from Pasco County due to water quality issues with the existing wells.

Table 5– Aloha Gardens Water Treatment Plant Flows

WTP No. 8	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Aloha Gardens WUP	0.123	0.078	63%
Purchased Water (Pasco Interconnect)	N/A	0.344	N/A
		0.422	

Aloha Gardens Wastewater Treatment

All wastewater from the Aloha Gardens service area is sent to Pasco County for treatment through a bulk service agreement.

Seven Springs Water Treatment

The Seven Springs water system previously consisted of seven small water treatment plants. In FY 2011 the Centralized Mitchell Road WTP, Pasco County Interconnect, and Raw Water Transmission Main projects were completed. The system is now served by the centralized Mitchell Road WTP with additional water beyond the 2.289 MGD AADF WUP limitation being purchased from Pasco County.

As shown in Table 6, the Seven Springs utility system averaged 2.789 MGD in 2017. FGUA maximized use of its withdrawal capacity and utilized the interconnects with Pasco County for all additional flows beyond its WUP limit.

Table 6 – Seven Springs Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Permitted Raw Water Withdrawal	2.289	2.374	104%
Purchased Water (Pasco Interconnect)	N/A	0.415	N/A
		2.789	

Seven Springs Wastewater Treatment

The wastewater treatment plant is a 2.5 million gallon per day (MGD), annual average daily flow (AADF), Type I modified conventional activated sludge domestic wastewater treatment facility consisting of: one mechanical screening and grit removal both with manual bypass, one splitter box, and one equalization tank of 500,000 gallons total volume. After the equalization tank, flow is split into three trains. The existing Train 3 consists of two aeration tanks of 227,000 gallons total volume, one clarifier of 105,500 gallons total volume and 1,531 square feet total square area. Trains 1 and 2 from the newly constructed plant consists of one aeration basin of 650,000 gallons each for a total of 1.3 million gallons (MG) total volume, three clarifiers of 191,000 gallons each and surface area of 1963 square feet each for a total of 573,000 gallons and 5,889 square feet total surface area.

Combined flow from Trains 1, 2, and 3 is routed into an intermediate pumping station and from there to the one seven-cell declining rate filter of 3.4 MG and one automatic backwash filter of 4.1 MG. Both filters have a total capacity of 7.5 MG. From the filters, effluent flows via gravity to the two-bay, baffled chlorine contact chamber of 47,752 gallons total with each bay for a total volume of 95,505 gallons. After disinfection, effluent flows by gravity either to the reuse pumping station or to the reject holding tank or to the North Part IV pond, depending on its quality. Part III effluent flows to the reuse pumping station for distribution throughout the Seven Springs Service Area. Non-Part III effluent flows to the lined reject pond of 1.6 MG and/or to the reject holding tanks of 0.7 MG total volume for a total reject volume of 2.3 MG. Waste Activated Sludge (WAS) flows to seven biosolids holding tanks for a total volume of 1.195 MG. Chlorination is provided by a liquid chlorine feed system with an existing gaseous chlorine system to serve as back-up. Two power generation units are provided which together are of sufficient capacity to supply emergency power to all essential plant units as required for Class I Reliability.

The annual average daily flow was 1.78 MGD in fiscal year 2017. Current flows are within the plant's permitted capacity of 2.50 MG.

Table 7 – Seven Springs Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	2.5	1.780	71%

The Pasco Utility System served a total of 18,106 water, irrigation, and reuse customers and 15,355 wastewater customers in fiscal year 2017.

CONSOLIDATED UTILITY SYSTEM

SERVICE AREA

The Consolidated Utility System was originally comprised of 6 small service areas: Anclote, Angus Valley, Colonial Manor, Dixie Groves, Virginia City and Westwood. The Mad Hatter and Paradise Lakes Utility systems were acquired on May 17, 2012 and were combined with the Consolidated Utility Systems. The Consolidated Utility System is now comprised of 13 small service areas and includes the areas previously mentioned above as well as: Carpenter's Run, Cypress Cove, Foxwood Lakes, Linda Lakes, Paradise Lakes, Turtle Lakes and Twin Palms.

Anclote

The Anclote water system is located in Pasco County, approximately 3 miles north of Tarpon Springs, approximately ½ mile south of the Pinellas/Pasco line, west of US Highway 19. The service area encompasses approximately 964 acres, extending both in Pasco and Pinellas Counties. The system consists of single and multi-family homes, mobile home parks, light commercial shops and public schools.

Treatment – All water is purchased from the city of Tarpon Springs.

Angus Valley

The Angus Valley water system is located approximately 23 miles east of New Port Richey on SR 54, ½ mile west of I-75 in the Angus Valley subdivision approximately 1.3 miles west of Wesley Chapel on Dayflower Boulevard west of Old Pasco Rd and ½ mile north of SR 5.

Treatment – Water is withdrawn from two (2) production wells in the Floridan Aquifer. There are two (2) hydropneumatic tanks both with capacities of 5,000 gallons. Chlorine is injected for disinfection.

Colonial Manor

The Colonial Manor water system is located in Pasco County, approximately 1 mile southwest of the city of Elfers, ½ mile east of US Highway 19, in the subdivision off of Mogg Rd. The service area encompasses approximately 162.4 acres consisting of residential, light commercial and office spaces.

Treatment – All water is purchased from Pasco County.

Dixie Groves

The Dixie Groves water system is located in Holiday which is in the western portion of Pasco County, 3 miles south of New Port Richey, and one mile east of the intersection of US Highway 19 and County Rd. 595. The service area encompasses approximately 42 acres consisting of residential, light commercial and office spaces.

Treatment – Water is withdrawn from two (2) production wells in the Floridan Aquifer. There are two (2) hydropneumatic tanks with capacities of 1,500 and 3,000 gallons. Chlorine is injected for disinfection.

Virginia City

The Virginia City water system is located in New Port Richey, on Thys Road, in Pasco County, approximately 2.5 miles east of US Highway 19 on the north side of SR 5.

Treatment – Water is withdrawn from one (1) production well in the Floridan Aquifer. There is one (1) hydropneumatic tank with a capacity of 5,000 gallons. Chlorine and Ammonia are injected for disinfection via chloramination.

Westwood

The Westwood water system is located in southwestern Pasco County, north of Tarpon Springs, ½ mile west of US Highway 19. The Westwood service area encompasses approximately 182 acres. The system consists of mostly single family residential units.

Treatment – Water is withdrawn from one (1) production well in the Floridan Aquifer. There is one (1) hydropneumatic tank with a capacity of 10,000 gallons. Chlorine is injected for disinfection. There is also an emergency interconnect with Pasco County Utilities. Prior to utilization of the interconnect all Westwood customers are notified and the well is inactivated due to Pasco County Utilities utilizing chloramination for disinfection.

Mad Hatter Utility Systems

The Mad Hatter utility systems are located along State Road 54 (SR 54) near the intersection of US 41 in the south-central portion of Pasco County, Florida. The Mad Hatter systems are summarized below.

Carpenters Run

Treatment – The Carpenter's Run WTP consists of two water supply wells, two (2) 10,000 gallon hydropneumatic tanks, a diesel drive back up for one (1) of the wells, and a gas chlorination system for disinfection. All Mad Hatter water systems with the exception of Paradise Lakes and Linda Lakes are permitted as a basin under Water Use Permit No. 590.011 for 1.0 MGD annual average daily flow.

All wastewater is sent to Pasco County via an interconnect for treatment.

Cypress Cove

Treatment – The Cypress Cove WTP consists of two (2) water supply wells, a gas chlorination system for disinfection, a polyphosphate chemical system, and two (2) 10,000 gallon hydropneumatic tanks. All Mad Hatter water systems with the exception of Paradise Lakes and Linda Lakes are permitted as a basin under Water Use Permit No. 590.011 for 1.0 MGD annual average daily flow.

All wastewater is sent to Pasco County via an interconnect for treatment.

Foxwood Lakes

Treatment – The Foxwood Lakes WTP consists of one water supply well with a diesel engine drive back up, a gas chlorination system for disinfection, one (1) 10,000 gallon hydropneumatic tank. All Mad Hatter water systems with the exception of Paradise Lakes and Linda Lakes are permitted as a basin under Water Use Permit No. 590.011 for 1.0 MGD annual average daily flow. Due to water quality issues this well is operated as a standby we.

All wastewater is sent to Pasco County via an interconnect for treatment.

Linda Lakes

Treatment – The Linda Lakes WTP consists of one water supply well, treatment via liquid chlorine, and one (1) 5,000 gallon hydropneumatic tank. Due to the small size of this well a Water Use Permit is not required. This system is not part of Water Use Permit No. 590.011

The Linda Lakes service area also includes a small WWTP permitted to treat 20,000 gallons per day. The WWTP consists of a mechanical bar screen and grit removal system, four aeration basins, clarifier, chlorine contact chamber, digester and rapid infiltration basin.

Paradise Lakes

Treatment – The Paradise Lakes WTP consists of one (1) water supply well, a 10,000 gallon hydropneumatic tank, a gas chlorination system for disinfection and an 8kW propane generator. This system is permitted for 77,000 annual average daily under Water Use Permit No. 6223.

All wastewater is sent to Pasco County via an interconnect for treatment.

Turtle Lakes

Treatment – The Turtle Lakes WTP consists of two water supply wells, gas chlorination system for disinfection, and one (1) 20,000 gallon hydropneumatic tank. All Mad Hatter water systems with the exception of Paradise Lakes and Linda Lakes are permitted as a basin under Water Use Permit No. 590.011 for 1.0 MGD annual average daily flow.

All wastewater is sent to Pasco County via an interconnect for treatment.

Twin Palms

Treatment – Abandonment of the Twin Palms water supply well was completed in FY 2015. This well was abandoned due to sand intrusion. Water is no longer produced at this site. Twin Palms receives it water supply from the Carpenters Run and Turtle Lakes WTPs.

All wastewater is sent to Pasco County via an interconnect for treatment.

SYSTEM OPERATIONS

As shown in Table 8, all Consolidated System plant flows were under capacity leaving room for growth if needed. Although, the Mad Hatter WUP approached 97% of capacity this is mainly attributable to the time the Paradise Lakes Well was being replaced and the interconnect with Mad Hatter was operated.

Table 8 – Consolidated System Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Anclote (Water purchased from Tarpon Springs)	N/A	0.046	N/A
Angus Valley (2 wells) – WUP Limit	0.145	0.124	86%
Colonial Manor (Water purchased from Pasco)	N/A	0.090	N/A
Dixie Groves (2 wells) – WUP Limit	0.0536	0.036	67%
Virginia City (1 well and interconnect) – WUP Limit	0.083	0.049	59%
Westwood (1 well and Interconnect) – WUP Limit	0.029	0.017	59%
Paradise Lakes – WUP Limit	0.077	0.010	13%
Linda Lakes	N/A	0.020	N/A
Carpenters Run *		0.591	
Cypress Cove *		0.203	
Foxwood Lakes *	1.000	0.000	97%
Turtle Lakes *		0.174	

* These systems are combined and Permitted as a basin under the WUP.

Table 9 – Linda Lakes Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Three Month Average Daily Flow (MGD)	Average Daily Flow (MGD)	% Capacity TMADF
Totals	0.020	0.031	0.020	155%

This plant is permitted for TMADF and not AADF. In an effort to reduce the flows to within the TMADF limits, late in 2014 FGUA lined a large portion of the collection system. In addition, in FY 2016 FGUA proceeded with the installation of lockable cleanout caps in low lying areas. FGUA has been monitoring the results but if the TMADF cannot be reduced within the permitted limits FGUA will have to take additional measures which may include expanding the WWTP.

The Consolidated Utility System served a total of 6,552 water and irrigation customers and 3,376 wastewater customers in fiscal year 2017.

LINDRICK UTILITY SYSTEM

SERVICE AREA

The Lindrick service area is comprised of approximately 3.24 square miles and consists of a population of approximately 4,600 people. The majority of the Lindrick service area is located west of US-19 on Florida's Gulf of Mexico coastline.

Lindrick's water supply comes from the Floridan Aquifer. The water system serves its customers with six permitted supply wells under Southwest Florida Water Management District (SWFWMD) water use permit number 2978.013. The majority of customers served are residential.

Flows from the 19 lift stations in the Lindrick wastewater collection system are sent to the city of New Port Richey wastewater treatment plant under a bulk wastewater service agreement. The current agreement is in effect until July 1, 2021 and allows up to 700,000 gallons per day of treatment capacity.

Water Treatment

The Lindrick system was organized in 1960 to serve the Gulf Harbors Development and was acquired by the Lindrick Service Corporation in 1965. In November 2002 Lindrick Service Corporation began purchasing water from Pasco Reserve Corp. to supplement its water supply. Subsequently on November 9, 2009 ownership of the Lindrick Utility System and Pasco Reserve well field / transmission lines was purchased by the FGUA.

The Lindrick system consists of six (6) permitted production wells (No. 2, 3, 4, 5, 6, 8). Wells No. 1 and 7 are currently out of service. Well No. 1 includes a 10,000 gallon hydropneumatic tank, Well No. 4 includes a 6,000 gallon hydropneumatic tank, and Well No. 5 includes a 5,000 gallon hydropneumatic tank.

Water from all wells is conveyed to a centralized treatment system located at the Well No. 1 site. Ammonium Sulfate and Liquid Chlorine is injected for disinfection.

As shown in Table 10, plant flows averaged 0.669 MGD in fiscal year 2017 – 77% of the permitted raw water withdrawals.

Table 10 – Lindrick Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Lindrick WTPs – WUP Limit	0.870	0.669	77%
Lindrick WTPs – Treatment Capacity	1.944	0.669	34%

Wastewater Treatment

The Lindrick wastewater collection system serves a population of approximately 4,600 people and consists of approximately 550 manholes, 137,500 feet of gravity sewer and nineteen (19) lift stations. Lift station No. 17 is a triplex station with three pumps and all other stations are dual pump submersible type.

The wastewater from the Lindrick area is pumped to the old Lindrick WWTP which has been converted to a "Master Lift Station" (No. 17). From the master lift station it is sent to the city of New Port Richey WWTP for treatment and disposal under a Bulk Wastewater Treatment Agreement which allows up to 700,000 GPD of treatment capacity. The current ADF being sent to the city of New Port Richey is within the Bulk Wastewater Treatment Agreement and should provide enough capacity into the 10 year planning period.

Table 11 – Lindrick Wastewater Collection System Flows

WWTP	Bulk Service Agreement (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	0.700	0.466	67%

The Lindrick Utility System served a total of 3,095 water customers and 2,597 wastewater customers in FY 2017.

NORTH FORT MYERS UTILITY SYSTEM

SERVICE AREA

The North Fort Myers service area was initially organized by North Fort Myers Utility, Inc. on January 23, 1978 to provide central sewer service to Old Bridge Park, a mobile home community. Since then it has expanded its service area to include a large portion of the unincorporated area north of the Caloosahatchee River in Lee County, FL. On June 17, 2010 North Fort Myers Utility, Inc. sold the North Fort Myers Utility system to the Florida Governmental Utility Authority.

The service area also includes two small water systems, Pine Lakes and Lake Fairways both located in Lee County, in North Fort Myers, at 10200 Pine Lakes Boulevard and 19371 North Tamiami Trail, respectively. The water distribution system is comprised of approximately 128,175 LF of 2" through 8" water mains serving approximately 1,841 residential units. Both communities are built out and future development or expansion is not expected.

SYSTEM OPERATIONS

Water Treatment

The water distribution system consists of two separate systems: Pine Lakes and Lake Fairways. Both Pine Lakes and Lake Fairways systems are built out with no future development expected.

The Pine Lakes water system is supplied by Lee County through a master meter. The master meter is located on U.S. 41. The Lake Fairways water system consists of two production wells in the Mid Hawthorn Aquifer which send the raw water to a centralized water treatment plant located inside the community. Raw water is sent to a tray aeration unit mounted on the roof of the ground storage tank which removes hydrogen sulfide and small amounts of ferrous iron. Liquid chlorine is used for disinfection.

Treated water is stored in two (2) storage tanks located at the treatment plant. There is a 200,000 gallon concrete ground storage tank and a 7,500 gallon hydropneumatic tank. The Lake Fairways WTP current WUP limit is 37 MG annually (0.101 MGD).

As shown in Table 12, plant flows averaged 0.075 MGD in 2017 – 75% of the plants permitted water use capacity.

Table 12 – North Fort Myers Water Treatment Plant Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Lake Fairways – WUP limit	0.101	0.076	75%
Lake Fairways – Treatment Capacity	0.200	0.076	38%

Wastewater Treatment

The North Fort Myers system is served by two separate collection and treatment facilities, the Del Prado WWTP and the Lake Fairways WWTP.

The Del Prado WWTP is located in Northern Lee County in North Fort Myers, at 4100 Del Prado Boulevard, approximately 1.6 miles east of Tamiami Trail (US 41) and serves approximately 42,000 people. The treatment plant permitted capacity is 4.25 MGD annual average daily flow & 4.80 MGD three month average daily flow. The plant is an extended aeration process domestic wastewater treatment facility and includes an influent mechanical screen, a by-pass bar screen, grit removal system, two EQ tanks, two oxidation ditches, two clarifiers, a chemical feed system, two traveling bridge filters, a chlorine contact chamber, a reject chlorine contact chamber, two digesters, a rotary drum thickener with polymer feed system, a lime silo, two sludge holding tanks and a 1.0 MG reuse storage tank. There is also a 4.87 MGD deep injection well located at the WWTP.

The Lake Fairways WWTP is an extended aeration process domestic WWTP with a permitted capacity of 0.300 MGD AADF. The facility consists of an influent screen, one surge tank, two aeration basins, two clarifiers, one digester and a clear well. The facility includes a public access reuse system which is used to irrigate the Pine Lakes golf course.

The annual average daily flow for fiscal year 2017 was 3.243 MGD for the Del Prado WWTP. The current plant flow is within the plant's permitted capacity of 4.25 MGD. These flows have increased as a result of the Waterway Estates interconnect coming online. The Lake Fairways WWTP is operating well within its permitted capacity.

Table 13– North Fort Myers Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) TMADF	Three Month ADF (MGD)	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity AADF
Del Prado WWTP	4.80	4.00	4.250	3.243	76%
Lake Fairways WWTP	N/A	N/A	0.300	0.124	41%

The utility system served a total of 1,855 water customers and 11,949 wastewater customers in fiscal year 2017.

MACDILL AIR FORCE BASE UTILTIY SYSTEM

SERVICE AREA

The MacDill Air Force Base (AFB) is located eight miles south of downtown Tampa on the Southwestern tip of the interbay Peninsula on the west coast of Florida. The AFB privatized utilities in 2011 and ownership of all water and wastewater system assets transferred to the FGUA. The FGUA now has the primary responsibility in operating and maintaining the system.

The MacDill AFB water system serves a population of approximately 12,800. The MacDill AFB purchases treated water from the city of Tampa Water Department through three interconnections. The MacDill AFB water system consists of treatment facilities, water storage tanks, and the transmission/distribution system, along with associated pumps, valves and appurtenances. Flows currently average 0.811 MGD.

The MacDill AFB wastewater system consists of collection facilities, lift stations, force mains, treatment facilities, an effluent disposal system and a biosolids disposal system. The wastewater treatment facility is permitted for 1.20 MGD AADF and is a conventional activated sludge system. The facility was originally constructed in 1952 and has been upgraded 6 times since 1952. The available wastewater treatment and disposal capacities for MacDill AFB are considered adequate to meet present and future demands. Flows currently average around 0.488 MGD.

SYSTEM OPERATIONS

MacDill AFB Water Treatment

Treated water is purchased from the City of Tampa Water Department (CTWD), which utilizes the Hillsborough River as its primary water source. CTWD treatment includes coagulation, flocculation, sedimentation, pH stabilization, disinfection, fluoridation, filtration, and final disinfection with chlorine and ammonia. Water is conveyed to the AFB through three interconnects with CTWD. Each of the three interconnects is equipped with a 6 inch water meter and backflow prevention device.

The water system is well designed with multiple supply points, effective system looping, and sufficient storage capacity. The system utilizes sodium hypochlorite and ammonia to maintain residual disinfectant levels at the AFB.

As shown in Table 14, the MacDill plant flows averaged 0.811 MGD for fiscal year 2017.

Table 14 – MacDill AFB ADF

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
All Water Purchased from CTWD	N/A	0.811	N/A

Wastewater Treatment

The wastewater treatment plant is a 1.20 MGD annual average daily flow (AADF) conventional activated sludge system with mechanical bar screen, grit removal, flow equalization basin, pump station, fine bubble aeration basin, clarifiers, sand filters, chlorine contact basin and effluent pumping. Current plant flow is approximately 0.488 MGD or 41% of the total plant capacity.

Treated effluent is sent to the north pond to supply two golf courses for irrigation. The golf courses include about 497 acres of combined surface area.

The annual average daily flow was 0.488 MGD. The current plant flow is within the plant's permitted capacity of 1.20 MGD.

Table 15 – MacDill AFB Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Totals	1.20	0.488	41%

LAKE AQUA UTILITY SYSTEM

SERVICE AREA

FGUA currently owns and operates twenty-five (25) water treatment plants (WTPs) and seven wastewater treatment facilities (WWTFs) in Lake County, Florida consisting of both residential and commercial customers.

SYSTEM OPERATIONS

Water Treatment

The water treatment systems provide potable drinking water to approximately 5,060 customers. Most of the water systems are relatively small, with 16 of the 25 systems serving 200 connections or less. Nine of the water treatment systems serve a customer base that ranges from 200 to 400 connections. The largest system in the group (Silver Lake Estates Water Treatment Plant) has a treatment capacity of 0.629 million gallons per day (MGD). Each water treatment system utilizes one or two water supply wells, most of which are permitted by the Florida Department of Environmental Protection and have a Consumptive Use Permit (CUP) from the St. Johns River Water Management District (SJRWMD).

As shown in Table 16, all Lake System plant flows were under capacity with the exception of Haines Creek.

Table 16 – Lake Aqua System Flows

Wastewater Treatment

The seven (7) WWTFs serve a total of 1,248 customers in Lake County. These facilities range in size from 20,000 to 80,000 gallons per day. Process treatment at each facility consists of extended aeration treatment for domestic wastewater using chlorine disinfection for final treatment prior to effluent discharge. Effluent disposal usually consists of rapid infiltration basins or permitted reuse facilities using sprayfields.

As shown in Table 17, all Lake Aqua System WWTP flows were under capacity leaving room for growth if needed.

Table 17 – Lake Aqua Wastewater Treatment Plant Flows

WWTP	Permitted Capacity (MGD) AADF	Average Daily Flow (MGD)	% Capacity
Fairways at Mt. Plymouth	0.075	0.033	44%

The Lake Aqua Utility System served a total of 5,061 water customer accounts and 1,248 wastewater customer accounts as of September 30, 2017.

PASCO AQUA UTILITY SYSTEM

SERVICE AREA

The FGUA Pasco Aqua Utility System is comprised of three potable water systems that serve approximately 3,272 connections, primarily residential. Two of these systems, Jasmine Lakes and Zephyr Shores have their own water treatment plants (WTPs) while the third system, Palm Terrace, purchases water from Pasco County Utilities and requires no additional treatment before distribution to its customers. FGUA uses both treated groundwater and purchased water to serve its customers in the Pasco Aqua Utility System.

Jasmine Lakes

The Jasmine Lakes Water Treatment Plant (WTP) is located at 7612 Pineapple Lane in Port Richey. Four (4) groundwater supply wells, referenced as the Oak Hill and Hickory Hill wells, provide the source of water for the Jasmine Lakes WTP.

Jasmine Lakes WTP has four groundwater wells that pump water into a 500,000 gallon, concrete ground storage tank for raw water storage. The raw water is treated by chlorination after it is pumped from the ground storage tank and receives disinfection contact time in a 32,000 gallon hydropneumatic tank prior to entering the distribution system. The hydropneumatic tank does not contain air, so it is acting solely as a contact tank.

The Jasmine Lakes WWTF is a Type II extended aeration domestic wastewater treatment facility located at 1000 Holly Lane in Port Richey. The WWTF has a capacity of 370,000 gallons per day (gpd) permitted on the basis of a three-month rolling average daily flow (3MRAF). It is limited to 308,000 gpd annual average daily flow (AADF) however due to limited effluent disposal.

Palm Terrace

Palm Terrace Gardens is located north of the Jasmine Lakes utility system in Port Richey, and is a consecutive system that purchases all of its water from Pasco County Utilities.

The Palm Terrace Gardens WWTF is located at 116 Arbordale Drive in New Port Richey, and has a permitted AADF capacity of 130,000 gallons per day (gpd). The facility is permitted in terms of annual average daily flow (AADF) and is a Type II, extended aeration domestic wastewater treatment facility.

Zephyr Shores

The Zephyr Shores water treatment plant is located at 35235 State Road 54 in Zephyrhills. The WTP is served by one (1) water supply wells that is located on the plant site. The system was recently converted to chloramines and the emergency interconnect with Pasco County was rehabilitated.

The Zephyr Shores wastewater system is a collection system only. Wastewater is sent to Pasco County Utilities for treatment.

SYSTEM OPERATIONS

As shown in Table 18, all Pasco Aqua System plant flows were under capacity.

Table 18 – Pasco Aqua System Flows

WTP	Permitted Capacity (MGD)	Average Daily Flow (MGD)	% Capacity
Jasmine Lakes – WUP Limit	0.318	0.206	65%
Palm Terrace - Interconnect	N/A	0.161	N/A
Zephyr Shores – WUP Limit	0.036	0.028	78%

Table 19 – Pasco Aqua Wastewater Treatment Plant Flows

Jasmine Lakes	0.308	0.197	64%
Palm Terrace	0.130	0.105	81%
Zephyr Shores - Interconnect	N/A	N/A	N/A

The Pasco Aqua Utility System served a total of 3,272 water customer accounts and 3,105 wastewater customer accounts as of September 30, 2017.

UNIFIED AQUA UTILITY SYSTEM

SERVICE AREA

The FGUA owns and operates 43 water treatment systems and 12 wastewater systems located throughout various Florida counties which include Alachua, Citrus, Hardee, Lee, Marion, Orange, Polk, Putnam, Seminole, and Volusia Counties. These facilities are collectively referred to as the Unified Systems.

SYSTEM OPERATIONS

Water Treatment

Permitted capacities for the water treatment systems range from a minimum of 21,096 gpd (Putnam County) to a maximum of 541,589 gpd (Seminole County). Twelve (12) of the water systems do not have consumptive use permits due either to the smaller size of their system or because the facility purchases water from a neighboring utility. Most of the water facilities are relatively small with 31 systems serving 200 connections or less. Seven (7) of the water treatment systems serve between 200 and 400 connections while the largest system in the group (Seminole County - Chuluota) has a permitted capacity of 0.542 million gallons per day (MGD) and serves 1,410 connections. Each water treatment system utilizes one or two water supply wells, most which are permitted by the Florida Department of Environmental Protection and have a Consumptive Use Permit (CUP) from one of the Florida Water Management Districts (WMDs).

As shown in Table 20, all Unified System plant flows were under capacity with the exception of the Twin Rivers WTP which is slightly over capacity.

Wastewater Treatment

The twelve wastewater systems range in size from 12,000 to 264,000 gpd. The collections systems which serve these facilities include approximately 166,000 linear feet of gravity mains and force mains in addition to associated pump stations. Two of the wastewater systems (Lake Gibson and Beecher's Point) pump flows to a neighboring utility for treatment and disposal. The remaining ten systems in the group have treatment facilities consisting of extended aeration process treatment for domestic wastewater using chlorine disinfection for final treatment prior to effluent discharge. Depending on the facility, effluent disposal consists of using permitted reuse facilities comprised of rapid infiltration basins, percolation ponds, holding ponds and sprayfields, spray irrigation (golf course), or through an existing reclaimed water agreement (city of Oviedo).

As shown in Table 21, all Unified System plant flows were under capacity with the exception of the Peace River and Jungle Den WWTPs which were over capacity.

Table 21 – Unified Wastewater Treatment Plant Flows

*Lake Gibson is an Interconnected System

** Florida Central Commerce Park WWTP decommissioned in Sept 2016 and interconnected with the city of Longwood.

The Unified Aqua Utility System served a total of 7,736 water customer accounts and 1,992 wastewater customer accounts as of September 30, 2017.

Economic Condition

The information presented in the financial statement is perhaps best understood when it is considered from the broader perspective of the specific environment within which the FGUA utility systems are located.

Both the Lehigh Acres Utility System and the North Fort Myers Utility System are located in Lee County, which had been one of the fastest growing regions in the nation until the downturn in the housing market. According to data from the Florida Legislature Office of Economic and Demographic Research, Lee County's population was anticipated to increase from 618,754 in 2010 to 698,468 in 2017, an increase of

12.9%. The number of housing units permitted in Lee County increased from a six-year average beginning in 2010 of 3,176 to 5,417 in 2016. The unemployment rate continued to decline from the peak of 12.6% in 2010 to 4.6% in 2016. Recent foreclosure information suggests that the housing market continues to improve. Personal bankruptcy filings also improved from 1.89 per 1,000 of population in 2016 to 1.55 per 1,000 of population as of March 31, 2017. The two Lee County systems have a significant amount of undeveloped land for future growth and expansion.

The Golden Gate Utility System is located in Collier County. There is limited potential for new residential and commercial growth with the Golden Gate service area. According to data from the Florida Legislature Office of Economic and Demographic Research, Collier County's population was anticipated to increase from 321,500 in 2010 to 357,470 in 2017, an increase of 11.2%. The number of housing units permitted in Collier County increased from a six-year average beginning in 2010 of 2,423 to 3,829 in 2016. The unemployment rate continued to decline from the peak of 11.6% in 2010 to 4.8% in 2016. Personal bankruptcy filings improved from 3.64 per 1,000 of population in 2016 to 1.35 per 1,000 of population as of March 31, 2017.

The Pasco, Lindrick, Consolidated and Pasco Aqua Utility Systems are located in Pasco County. According to data from the Florida Legislature Office of Economic and Demographic Research, Pasco County's population is anticipated to increase from 464,697 in 2010 to 505,709 in 2017, an increase of 8.8%. The number of housing units permitted in Pasco County increased from a six-year average beginning in 2010 of 1,958 to 3,905 in 2016. The unemployment rate continued to decline from the peak of 11.9% in 2010 to 5.2% in 2016. Personal bankruptcy filings continued to improve from 2.53 per 1,000 of population in 2016 to 2.26 per 1,000 of population as of March 31, 2017. Again, recent data suggests an improvement in market conditions. Portions of the FGUA service areas in Pasco County (Seven Springs) have significant potential for future growth and development, while others have limited growth opportunities.

The Lake Aqua Utility Systems are located in Lake County. The FGUA service area within Lake County is largely built out and has limited growth opportunities. According to data from the Florida Legislature Office of Economic and Demographic Research, Lake County's population is anticipated to increase from 297,047 in 2010 to 331,724 in 2017, an increase of 11.7%. The number of housing units permitted in Lake County increased from a six-year average beginning in 2010 of 1,501 to 3,966 in 2016. The unemployment rate continued to decline from the peak of 11.8% in 2010 to 4.9% in 2016. Personal bankruptcy filings continued to improve from 2.72 per 1,000 of population in 2016 to 2.44 per 1,000 of population as of March 31, 2017.

The Unified Aqua Utility System is spread throughout 10 different Florida Counties. A majority of the customers are located within Seminole County and Polk County. According to released data from the Florida Legislature Office of Economic and Demographic Research, Florida's population is anticipated to increase annually by 347,468 from 2017 to 2020. The number of housing units permitted in Florida is back in positive territory, showing continued strong growth throughout the State. The unemployment rate continued to decline from the peak of 10.5% in 2010 to 3.7% as of December 2017.

Internal Control

In developing and evaluating the FGUA's accounting system, consideration is given to the adequacy of internal accounting controls. Internal accounting controls are designed to provide reasonable, but not absolute assurance regarding: (1) the safeguarding of assets against loss from unauthorized use or disposition; and (2) the reliability of financial records for preparing financial statements and maintaining accountability for assets. The concept of reasonable assurance recognizes that: (a) the cost of a control should not exceed the benefits likely to be derived there from; and (b) the evaluation of costs and benefits

requires estimates and judgments by management. We believe all internal control evaluations occur within the above framework and that the FGUA's internal accounting controls adequately safeguard assets and provide reasonable assurance of proper recording of financial transactions.

Budgetary Control

The FGUA maintains a system of budgetary controls. The objective of these controls is to ensure compliance with legal provisions embodied in the annual appropriated budget approved by the Board. The level of budgetary control (i.e., the level at which expenditures cannot legally exceed the appropriated amount) is at the fund level. The FGUA also maintains an encumbrance system as one method of maintaining budgetary control. Encumbered amounts lapse at year end; however, outstanding encumbrances are re-appropriated as part of the following year's budget.

The budget process begins in the spring, when the staff develops proposed capital projects and operating budgets, with input from the Capital Program and Operations Managers and the Contract Operator. A planning retreat by the Board of Directors and senior staff is conducted in February or March of each year and is used to establish or update long-range system goals. Detailed budgets are presented by staff to the Systems Manager in late May. The System Manager's budget is forwarded to the Board of Directors in June. Any adjustments to the budget, to include public hearings for any necessary rate changes, are typically conducted in August and September. The Board of Directors approves the final budget at a public hearing in September for the new fiscal year that begins October 1.

As demonstrated by the statements and schedules included in the financial section of this report, the FGUA meets its responsibility for sound financial management.

Factors Affecting Financial Condition

Capital Improvement Program – The FGUA has adopted a five-year Capital Improvement Program (CIP) for the years 2017 to 2021, which outlines additions and improvements to its utility systems. The FGUA reviews and updates this five-year plan annually, authorizing appropriations for those projects scheduled to be started during the ensuing fiscal year. The cost of all new projects for fiscal year 2017 is approximately $18.9 million, and is estimated to total $60.0 million for the fiscal years 2017 – 2021. The CIP for each system is segregated into five major program areas, as follows:

Wastewater Collection – This program calls for improvements to existing wastewater lines as well as the addition of new lines as the customer base increases. This program also calls for renewal of the existing system by repairing lines that allow infiltration/inflow and the rehabilitation of lift stations.

Wastewater Treatment Facilities/Disposal – This program seeks to increase existing capacity as well as upgrade existing facilities. The objectives of this program are to promote reuse of reclaimed water, protect the environment, ensure that treatment capacity is available for growth, and ensure that facilities are in compliance with regulations of the United States Environmental Protection Agency and the State of Florida Department of Environmental Protection.

Water Treatment Facilities (Water Production/Treatment) – This program ensures that the FGUA is able to deliver water to its customers during peak periods by expanding current production capabilities. This program also includes a comprehensive renewal program which provides for maintenance of water tanks, well pump facilities, well power systems, and filtration equipment.

Water Distribution – This program calls for improvements to existing water lines as well as the addition of new lines as the customer base increases.

Meters – In order to maintain accurate water usage data for appropriate billing and reporting, the FGUA replaces a certain number of meters each year. Most residential meters are replaced at ten years of age. Larger meters need to be replaced more frequently. The FGUA is currently replacing manual read meters with electronic (AMI) read meters in five of the major utility systems. Replacements began in the spring of 2017 and are expected to be completed in all five of these systems by the spring of 2019.

Large Capital Projects – Specific project cost centers are created for special large projects as needed.

The successful implementation of FGUA's Capital Improvement Program calls for a portion of funding to be provided through existing balances of construction funds from bonds, with the remaining amounts to be funded from operating revenues and impact fees.

Financial Policies

In January 2009, the FGUA Board approved a Net Asset (Working Capital) Policy in order to maintain and improve financial stability and manage its financial resources for its various enterprise funds to: (1) provide sufficient cash flow for daily financial needs, (2) secure and maintain the highest possible investment grade bond ratings, (3) position properly for significant economic downturns or revenue shortfalls, and (4) provide funds for unforeseen expenditures related to emergencies.

The FGUA's investment policy is designed to minimize credit and market risk while maintaining a competitive yield on its investments. As of the end of the Fiscal Year all deposits were entirely covered by either federal depository insurance or pooled collateral held by the State Treasurer pursuant to Chapter 280, Florida Statutes.

Awards and Acknowledgements

The Government Finance Officers Association of the United States and Canada (GFOA) awarded a fifteenth consecutive Certificate of Achievement for Excellence in Financial Reporting to the Florida Governmental Utility Authority for its Comprehensive Annual Financial Report for the fiscal year ending September 30, 2016. In order to be awarded a Certificate of Achievement, a government must publish an easily readable and efficiently organized comprehensive annual financial report. This report must satisfy both generally accepted accounting principles and applicable legal requirements.

A Certificate of Achievement is valid for a period of one year only. We believe that our current Comprehensive Annual Financial Report continues to meet the Certificate of Achievement Program's requirements, and we are submitting it to the GFOA to determine its eligibility for another certificate.

The preparation of this report could not have been accomplished without the efficient and dedicated services of the financial staff. Appreciation is expressed to all those who assisted and contributed to its preparation and to the Board for its interest and support in planning and conducting the operations of the FGUA in a responsible manner.

Respectfully submitted,

Stephen M. Spratt, System Manager

David M. DiLena, CPA, Chief Financial Officer

INDEPENDENT AUDITORS' REPORT

To the Board of Directors,
Florida Governmental Utility Authority:

Report on the Financial Statements

We have audited the accompanying financial statements of the business-type activities and each major fund of Florida Governmental Utility Authority (the Authority), as of and for the year ended September 30, 2017, and the related notes to the financial statements, which collectively comprise the Authority's basic financial statements as listed in the table of contents.

Management's Responsibility for the Financial Statements

The Authority's management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express opinions on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Opinions

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the business-type activities and each major fund of the Authority, as of September 30, 2017 , and the respective changes in financial position and cash flows thereof for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the management's discussion and analysis, as listed in the table of contents, be presented to supplement the basic financial statements. Such information, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

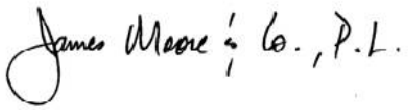
Other Information

Our audit was conducted for the purpose of forming opinions on the financial statements that collectively comprise the Authority's basic financial statements. The introductory and statistical sections are presented for the purposes of additional analysis and are not a required part of the basic financial statements.

The introductory section and statistical sections have not been subjected to the auditing procedures applied in the audit of the basic financial statements, and accordingly, we do not express an opinion or provide any assurance on it.

Other Reporting Required by *Government Auditing Standards*

In accordance with *Government Auditing Standards*, we have also issued our report dated March 12, 2018, on our consideration of the Authority's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the Authority's internal control over financial reporting and compliance.



Daytona Beach, Florida

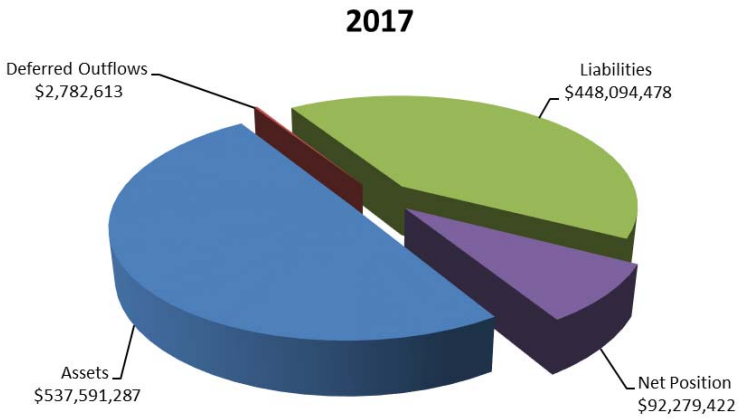
FLORIDA GOVERNMENTAL UTILITY AUTHORITY
MANAGEMENT'S DISCUSSION AND ANALYSIS
SEPTEMBER 30, 2017

As management of the Florida Governmental Utility Authority (FGUA), we offer readers of the FGUA's financial statements this narrative overview and analysis of the financial activities for the fiscal year ending September 30, 2017. We encourage readers to consider the information presented here in conjunction with additional information that we have furnished in our letter of transmittal, which can be found in the introductory section of this report.

FINANCIAL HIGHLIGHTS

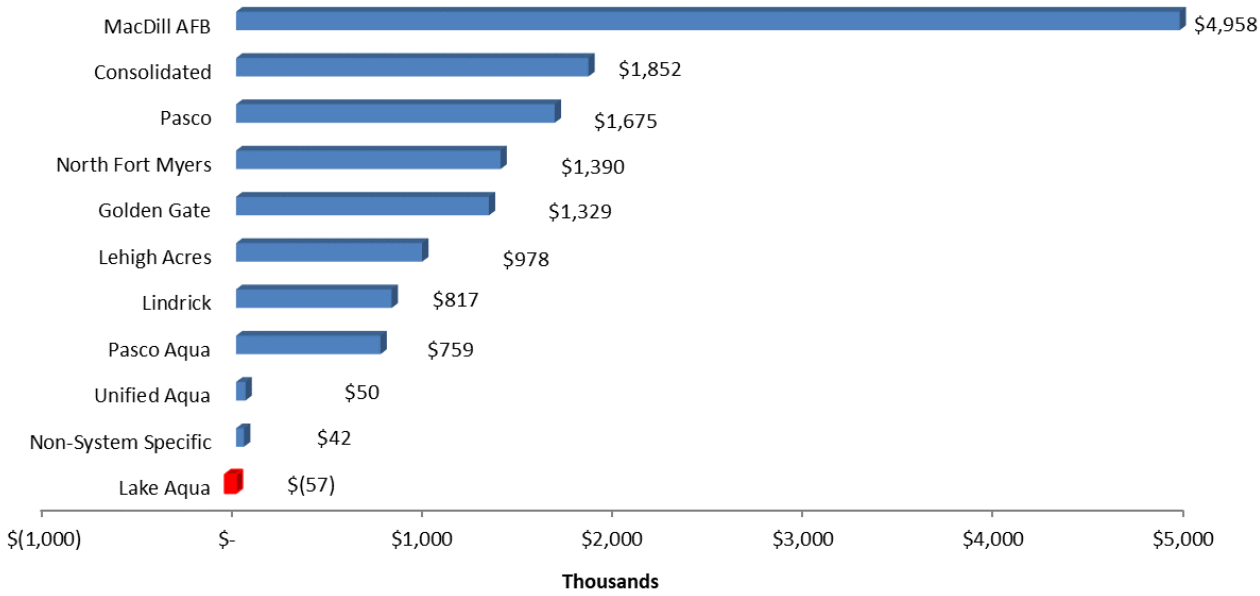
The assets and deferred outflows of the FGUA exceeded its liabilities and deferred inflows at the close of fiscal year 2017 by $92,279,422 as the chart to the right indicates. Of this amount, $57,674,936 may be used to meet the FGUA's ongoing obligations to citizens and creditors (Unrestricted Net Position). This is an increase of $4,830,915 or 9% in unrestricted net position from the prior year.



FGUA's total net position increased by $14 million in fiscal year 2017. As the chart on the next page indicates, all systems net positions increased as follows:

- The MacDill AFB Utility System contributed $4.9 million or 36% of the increase in total net position, primarily thanks to capital grants.
- The Consolidated Utility System contributed $1.8 million or 13.4% of the increase in total net position.
- The Pasco Utility System contributed $1.6 million or 12.1% of the increase in total net position.
- The North Fort Myers Utility System contributed $1.4 million or 10% of the increase in total net position.
- The Golden Gate Utility System contributed $1.3 million or 9.6% of the increase in total net position.
- The Lehigh Utility System contributed $1 million or 7% of the increase in total net position, primarily because of cost saving from bond refunding.
- The Lake Aqua, Pasco Aqua, and Unified Aqua Utility Systems contributed a combined $750 thousand or 5.45% of the increase in total net position.
- The Lindrick Utility System contributed $817,454 or 5.9% of the increase in total net position.
- The Authority has one non-specific fund that pre-pays expenses, and then is reimbursed by the appropriate enterprise funds upon determination of a reasonable allocation basis. It also pays for the rare non-allocable expenses for minor contractual services provided to the Authority. This fund had an increase in net position of $42,017, which increased the FGUA total net position by 0.3%.

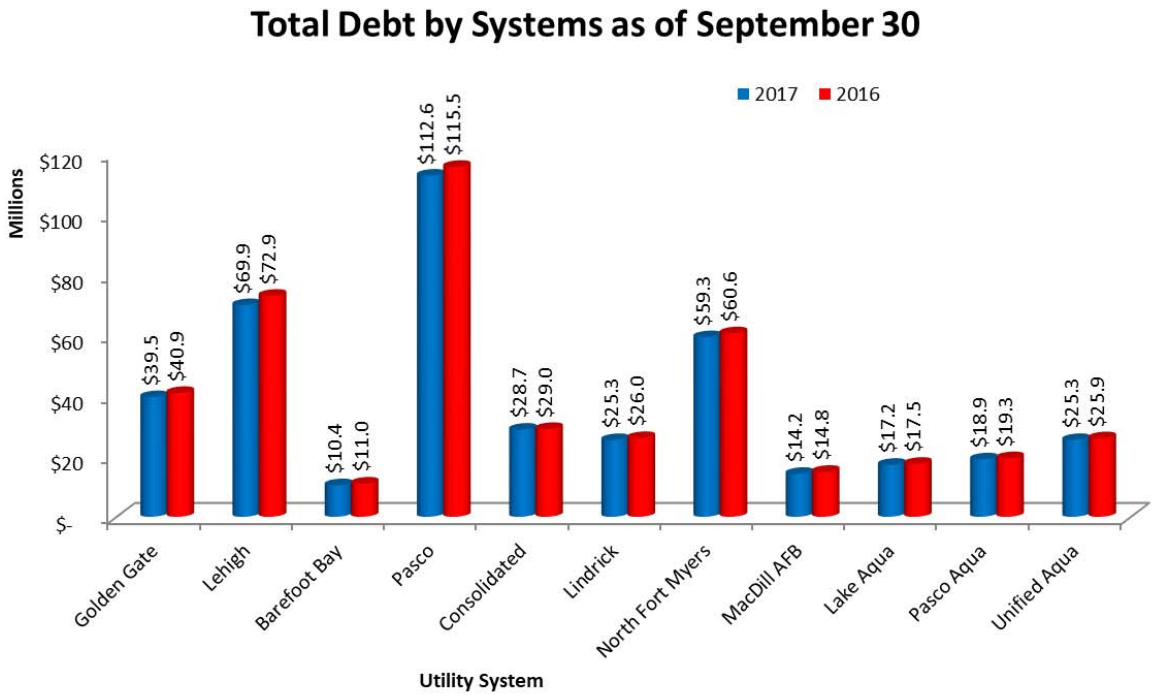
Increase (decrease) in Net Position by System for the Year Ending September 30, 2017



The net decrease in total debt as of September 30, 2017 was $12,072,192. As the chart on the next page indicates, the Lehigh Utility system had the greatest decrease in debt ($3 million) because of advance refunding efforts. The Pasco Utility system had the second greatest decrease in debt ($2.9 million) in the normal course of scheduled debt service.

The Barefoot Bay Utility System is treated like a custodial fund, where FGUA records the outstanding debt, along with the restricted assets secured to pay the debt as it becomes due. In fiscal year 2017, principal payments reduced the debt in this system by $555,000.

While most of the utility systems experienced a decrease in total debt, the Lake Aqua Utility System took on an additional $33 thousand in debt with a construction loan from the State Revolving loan Fund for wastewater system improvements. More information can be found in **Note 7** of the **Financial Section.**



OVERVIEW OF THE FINANCIAL STATEMENTS

This discussion and analysis is intended to serve as an introduction to the Florida Governmental Utility Authority's (FGUA) basic financial statements. Since the FGUA is a special purpose government involved solely in the provision of water and wastewater services to its customers on a fee basis, all funds are accounted for in Proprietary Funds, specifically eleven enterprise funds. Therefore, there are no government-wide financial statements, as they would be redundant to the fund financial statements. This report contains fund financial statements and notes to the financial statements. The report also contains other supplementary information in addition to the basic financial statements themselves.

Fund Financial Statements

A fund is a grouping of related accounts that is used to maintain control over resources that have been segregated for specific activities or objectives. The FGUA, like other state and local governments, uses fund accounting to ensure and demonstrate compliance with finance-related legal requirements. All funds of the FGUA are proprietary funds, with one fund set up for each geographically separate utility system operated by the FGUA.

Proprietary Funds

The FGUA operates only one type of proprietary fund, and a separate enterprise fund is maintained for each utility system. Enterprise funds are used to report business-type functions, which recover all or a significant portion of their costs through user fees and charges.

The proprietary fund financial statements are comprised of a Statement of Net Position, a Statement of Revenues, Expenses and Changes in Net Position, and a Statement of Cash Flows. The Statement of Net Position presents information on the FGUA's assets, deferred outflows of resources, liabilities, deferred inflows of resources and net position. The Statement of Revenues, Expenses and Changes in Net Position presents information on the revenues received, the expenses incurred, and the positive or negative results of the individual utility system's increase or decrease in net position, presented on an accrual basis. The Statement of Cash flows provides information on the cash flows of each utility system, based on operations, financing activities, capital uses, and investment activities and a supplemental schedule of noncash activities.

Notes to the Financial Statements The notes provide additional information that is essential to a full understanding of the data provided in the financial statements.

Other Information In addition to the basic financial statements and accompanying notes, this report also presents supplementary information concerning its compliance with the funding of outstanding debt issues. This information, known as Coverage Ratios, is provided as part of the information contained in the Statistical Section of this report.

GOVERNMENT-WIDE FINANCIAL ANALYSIS

Net position may serve over time as a useful indicator of a government's financial position. In the case of the Florida Governmental Utility Authority, the assets and deferred outflows exceeded the liabilities and deferred inflows by $92 million at the close of fiscal year 2017. See the condensed Statement of Net Position on the table on the next page.

- Net investment in capital assets (e.g. land, buildings, and equipment) is presented net of any depreciation and the outstanding balances of any bond or other borrowings that are attributed to the acquisition, construction, or improvements of those assets. These assets are used to provide services to our customers, and consequently, these assets are not available for future spending (restricted). Net investment in capital assets ended the year with a deficit balance of $7.5 million which is a $9 million improvement from the prior year deficit balance of $16.5 million. The deficit decreased because more capital assets were added than depreciation was expensed, and because more capital asset-related debt was paid off than was incurred.
- Net Position Restricted for Capital Projects ended the year with a balance of $13.3 million, which is an increase of $753 thousand. This is the balance in the Renewal and Replacement fund and the Water Capacity and Wastewater Capacity funds. These funds are restricted by board resolutions and by bond covenants to be used only for the purchase or construction of capital assets to renew and expand the utilities' assets. These funds increased this year as more unrestricted funds were used for pay-as-you-go construction projects, allowing the other restricted construction funds to be allocated to projects planned in future years.
- Net Position Restricted for Debt Service ended the year with a balance of $28,779,300 which is a decrease of $847,500 as compared to the prior year. Restricted for Debt Service represents resources reserved for payment of the debt service (principal and interest) on external debt; consequently, these assets are not available for other uses. Restricted for Debt Service decreased this fiscal year due to debt restructuring activity, most notably, the advance refunding of the Lehigh 2010 bonds with less expensive Lehigh 2017 bonds.
- Net Position Unrestricted ended the year with a balance of $57,674,936 which is an increase of $4.8 million or 9% as compared to the prior year and is available for other budgetary uses of the FGUA.

Florida Governmental Utility Authority Condensed Statement of Net Position

	2017	2016
Current & Other Assets	$ 249,351,731	$ 256,835,496
Capital Assets	288,239,556	276,902,826
Assets	**537,591,287**	**533,738,322**
Deferred loss on bond refunding	2,782,613	670,562
Deferred Outflows	2,782,613	670,562
Assets & Deferred Outflows	**$ 540,373,900**	**$ 534,408,884**
Long Term Liabilities	$ 409,991,007	$ 422,546,779
Other Liabilities	38,103,471	33,375,164
Total Liabilities	**448,094,478**	**455,921,943**
Net Position		
Net investment in Capital Assets	(7,514,336)	(16,569,953)
Restricted for Capital Projects	13,339,522	12,586,073
Restrcited for Debt Service	28,779,300	29,626,800
Unrestricted	57,674,936	52,844,021
Total Net Position	**$ 92,279,422**	**$ 78,486,941**

In the past year, current assets decreased by $7.4 million, as the FGUA paid down debt and invested in capital assets. Capital assets increased $11 million, thanks to the use of other current assets. Deferred Outflows increased by $2 million as the FGUA began amortizing a loss on the advance refunding of the Lehigh Series 2010 bonds and continues to write down the loss on refunding the Lehigh 2005, Golden Gate 1999 and Golden Gate 2005 bonds.

Total liabilities decreased by $7.8 million or 1.72%. The largest driver of liability balances is the advance refunding and restructuring of debt. Advance refundings were completed to replace higher cost bonds with new ones with lower interest rates and restructured the debt to make earlier principal repayments.

The increase in net position of $13.8 million represents the degree to which revenues have exceeded expenses in the past year combined with the decrease in debt. The refundings of Golden Gate and Lehigh bonds over the past three years has resulted in significantly lower interest expense. See chart on the next page.

Operating revenues increased 2.28%, mostly due to rate increases of 2% in most systems. Other operating expenses was $2.4 million (70%) higher than the previous year because of the increased labor and repairs incurred during Hurricane Irma. Thanks to proper planning, fund balance reserves were available to cover these additional costs. Operating and management services increased only 2.5% because these expenses are set in 5-year contracts.

For the fiscal year ending September 30, 2017, all of the FGUA utility systems' net positions increased except for the Lake Aqua Utility System. The Lake Aqua Utility System had a positive net increase up until Hurricane Irma occurred in September 2017. The FGUA continues to maintain a financially healthy system. The unrestricted cash balance increased by 19% from $49.1 million at fiscal year end 2016 to $58.5 million at fiscal year end 2017, showing financially healthy utility systems with good liquidity.

Florida Governmental Utility Authority Condensed Statement of Revenues, Expenses, and Changes in Net Position

	2017	2016
Operating revenues		
Water and wastewater revenues	$ 82,278,472	$ 80,618,152
Other operating revenues	3,139,205	2,892,330
Operating expenses	(43,898,839)	(40,562,861)
Operating income before depreciation and amortization	41,518,838	42,947,621
Depreciation and amortization	(19,142,302)	(18,737,495)
Operating income	22,376,536	24,210,126
Non-Operating revenues (expenses)		
Investment revenue, net	1,085,171	754,268
Operating grants	21,257	292,386
Miscellaneous non-operating revenues	334,439	295,944
Interest expense, net	(17,132,722)	(17,468,033)
Debt issuance cost	(293,719)	(153,398)
Income (loss) before capital contributions	6,390,962	7,931,293
Recoverable portion of purchase price (MacDill)	1,539,409	1,528,480
Capital contributions and grants	5,862,110	4,564,087

Total net position - beginning	78,486,941	64,463,081
Total net position - end of year	**$ 92,279,422**	**$ 78,486,941**

SIGNIFICANT CAPITAL ASSET AND LONG TERM DEBT ACTIVITY

The fiscal year ending September 30, 2017 represents the eighteenth full fiscal year of the FGUA's operations. During this period, the following significant events occurred:

Capital Assets

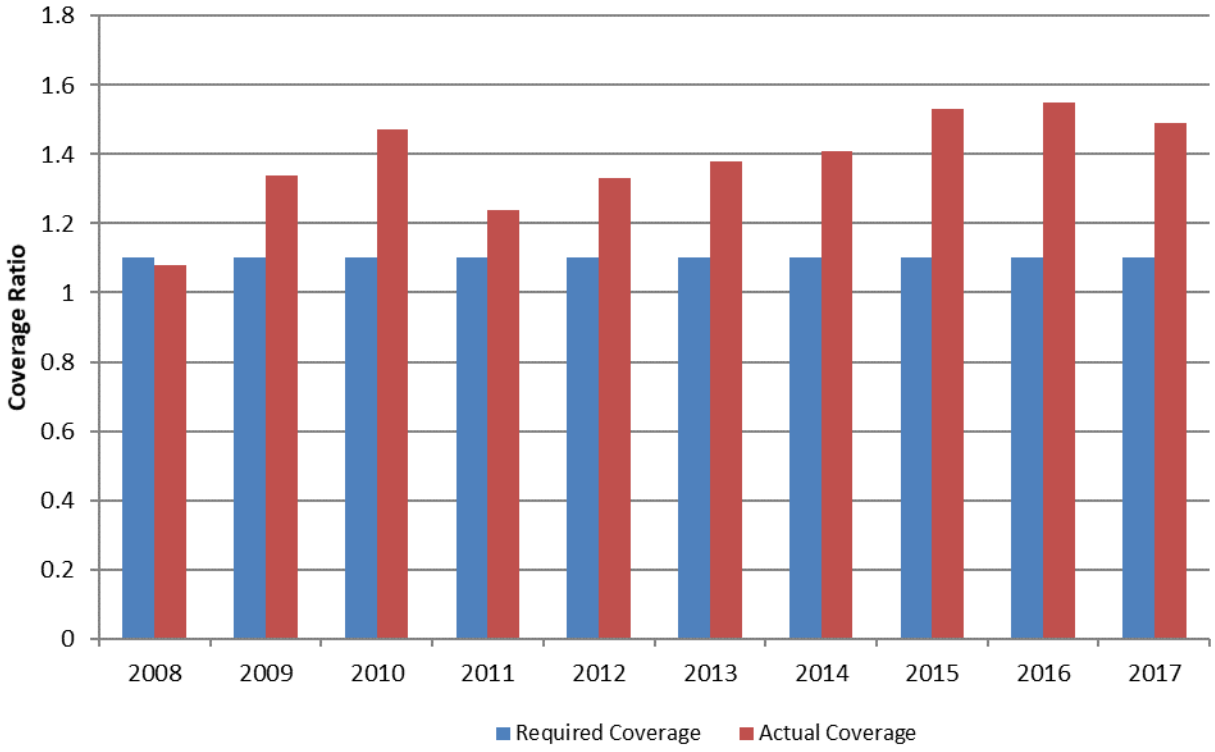
During FY 2017, the FGUA's net capital assets increased $11.3 million (4%). The MacDill AFB, Consolidated and Lehigh Acres utility systems each had net increases over $3 million in net capital assets. The Pasco, North Fort Myers, Lake Aqua and Unified Aqua utilities had depreciation greater than capital asset additions during FY 2017. The Lindrick and Golden Gate utilities systems also recorded significant increases in net capital assets. Of the $288 million recorded for Capital Assets (net of depreciation), $21 million represent costs incurred for capital projects that are under construction, but not yet completed as of September 30, 2017. Additional information on the FGUA's capital assets can be found in **Note 6** of the **Financial Section**.

Debt Administration

On September 30, 2017, the FGUA had outstanding debt in the amount of $417 million in the form of revenue bonds, state revolving loans, seller financed notes and a capital lease. This is a decrease of $11 million from the prior year's debt balance of $429 million. The FGUA tends to pay down $10 million a year in principal.

Half of the outstanding debt issues are fully insured via municipal bond insurance policies issued by Ambac Assurance Corporation and Assured Guaranty. The remaining issuances have reserve accounts with a September 30, 2017 fair market value of $14.3 million.

The FGUA maintains a debt coverage ratio of 1.1 or better (net operating income to debt service) for each of its utilities. The following chart shows the actual coverage compared to the required coverage for the past ten years for debt secured by pledged water and wastewater revenues.



The FGUA is prohibited by Chapter 163, Florida Statutes from imposing property taxes. In addition, it is further prohibited from issuance of general obligation debt. It is, however, authorized to impose special assessments upon property owners, whose property will benefit from water and wastewater system improvements.

Refer to **Note 7** and the **Statistical Section** for more information on the FGUA's Long Term Debt and Coverage Ratios for each utility system.

FACTORS EXPECTED TO HAVE AN ECONOMIC IMPACT ON FUTURE OPERATIONS

Future Growth in Customers

Due to continued economic conditions, customer growth within each utility system continues to be low. There was positive overall utility growth for fiscal year 2017. Nearly half of the net addition of 598 active connections took place in the Lehigh Acres Utility System, where developers are finally completing homes in new developments started in 2008. We predict the rate of future growth will continue to be relatively flat. Management monitors growth closely as it has an impact on the infrastructure needs of the Utility Systems and requires prudent long term capital planning. The FGUA will continue to meet system demands by managing the capital improvement projects in accordance with the FGUA capital improvement plan that is adopted each September with the FGUA operating budget. (Further information on customer growth for the past ten years can be found in the **Statistical Section**).

FINANCIAL INFORMATION

Operations

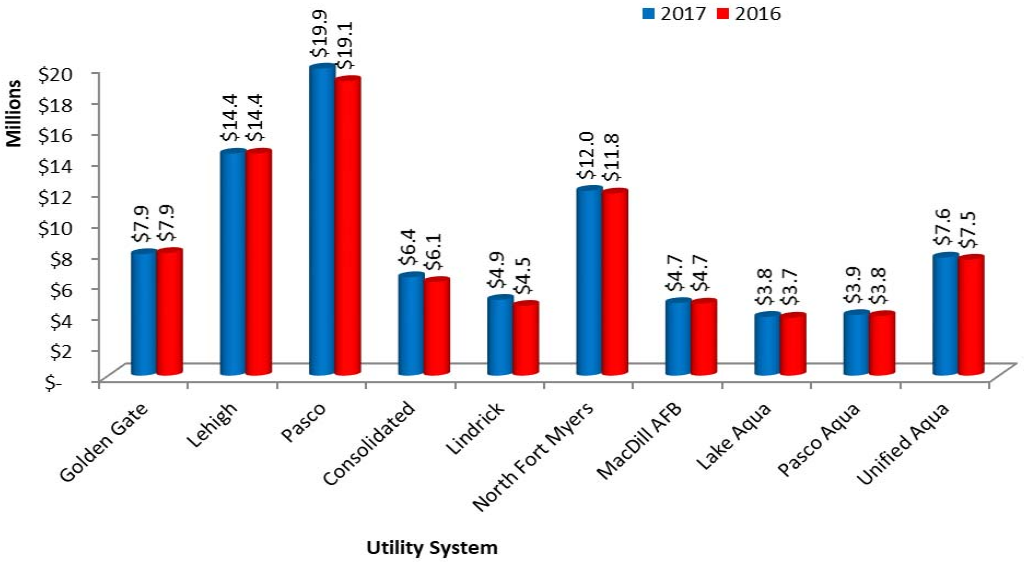
A core function of the FGUA is to use the collective power of local governments, performing as board members, to acquire, improve, operate, and maintain water and wastewater facilities. Local governments hold the option to acquire any FGUA utility system within its jurisdiction. This makes the FGUA a unique local government. The financial statements can fluctuate significantly as the FGUA acquires utility systems or transitions them over to the local government. There are also years that have small to moderate fluctuations when there are no acquisitions or transitions, and the financial activities are only reflective of traditional operational activities.

There are no major differences in FY 2017 operations as compared to FY 2016 operations, with the exception of the effects of hurricane Irma on other operating expenses in September 2017. Generally, revenues and expenses increased modestly. The new debt that was issued was more than offset by defeasance of other debt. The impacts of acquisitions and transitions are reflected throughout this narrative as explanations for the large variances from prior years; however, there were no acquisitions or sales of utility systems neither in FY 2017 nor in FY 2016. As a result, many of the explanations for the variances may seem redundant; however, each utility system of the FGUA operates independently. It is important, therefore, for the reader to understand that while the FGUA system, as a whole, may have been impacted by a transition activity in prior years; the explanations for the individual operations of the utility systems are more reflective of the traditional governmental utility operation.

Operating revenues (excluding the General Fund) increased $1.9 million or 2.3% from $83.4 million in FY 2016 to $85.3 million in FY 2017.

- The Golden Gate Utility System realized a decrease in operating revenues of -$74,290 or -0.9% as compared to the prior year. General water and wastewater revenues were actually slightly higher during FY 2017, however, late fees and the unbilled revenue calculations resulted in a net total decrease. Late fees were over $70k lower in FY 2017, because some of the largest delinquent accounts that paid the highest late fees were settled or otherwise paid off mid-year.
- The Lehigh Acres Utility System realized a decrease in operating revenues of $3,820 or -0.0% as compared to the prior year. Although water and wastewater revenues were actually up, the unbilled revenue estimate was $350,000 lower due to timing issues of billing dates.
- The Pasco Utility System realized an increase in operating revenues of $805,857 or 4.2% as compared to the prior year. This increase was primarily the result of a 2% rate increase, a slight increase in users, and a general increase in consumption.
- The Consolidated Utility System realized an increase in operating revenues of $310,857 or 5.1% as compared to the prior year. There was no rate increase for FY 2017. The increase is primarily a result of a 1% increase in the number of connections and a general increase in consumption.
- The Lindrick Utility System realized an increase in operating revenues of $388,446 or 8.6% as compared to the prior year. There was no rate increase for FY 2017. The increase is primarily an increase in consumption.
- The North Fort Myers Utility System realized an increase in operating revenues of $173,389 or 1.5% as compared to the prior year. This increase was primarily the result of a Consumer Price Index increase in rates at the beginning of the year.
- The MacDill AFB Utility System operating revenues increased $38,544, or 0.8%, as compared to the prior year. This increase is the result of a Consumer Price Index increase from the Federal Government effective March 1 of each year.
- The Lake Aqua, Pasco Aqua, and Unified Aqua Utility Systems contributed an additional $262,717 in operating revenues, a 1.7% increase over FY2016. This increase was primarily the result of Consumer Price Index rate increases for the Lake Aqua and Unified Aqua systems.

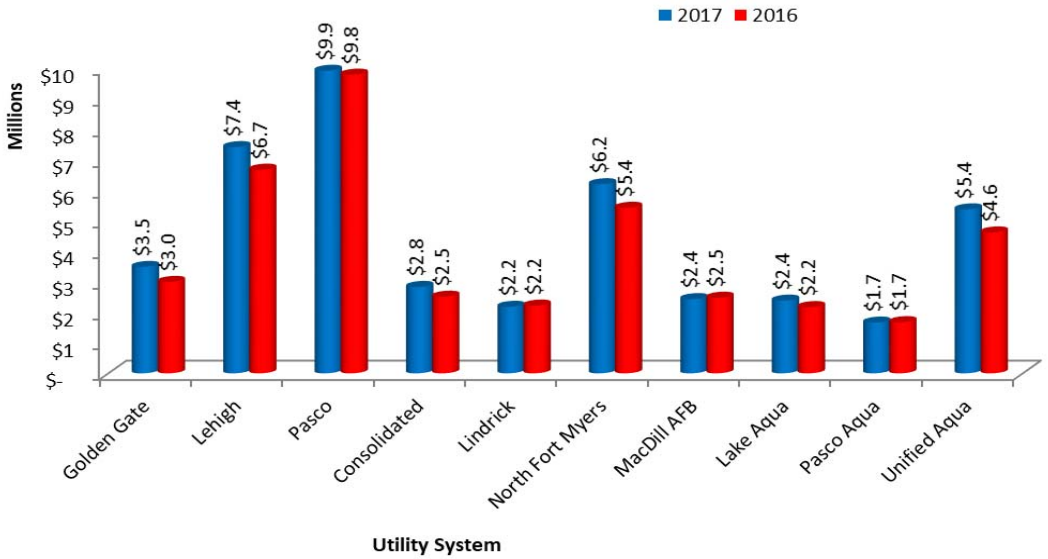
Operating Revenues by System for the Year Ending September 30



Operating expenses (excluding the General Fund and depreciation and amortization) were 8.2% higher than in FY 2016, increasing from $40.5 million in FY 2016 to $43.8 million in FY 2017. Nearly $2.3 million of the total $3.3 million increase was directly related to the Hurricane Irma Storm response. Normal Operating expenses increased only 2.6% or $1 million, over the previous year, in line with negotiated consumer price index increases to the operations and management contracts.

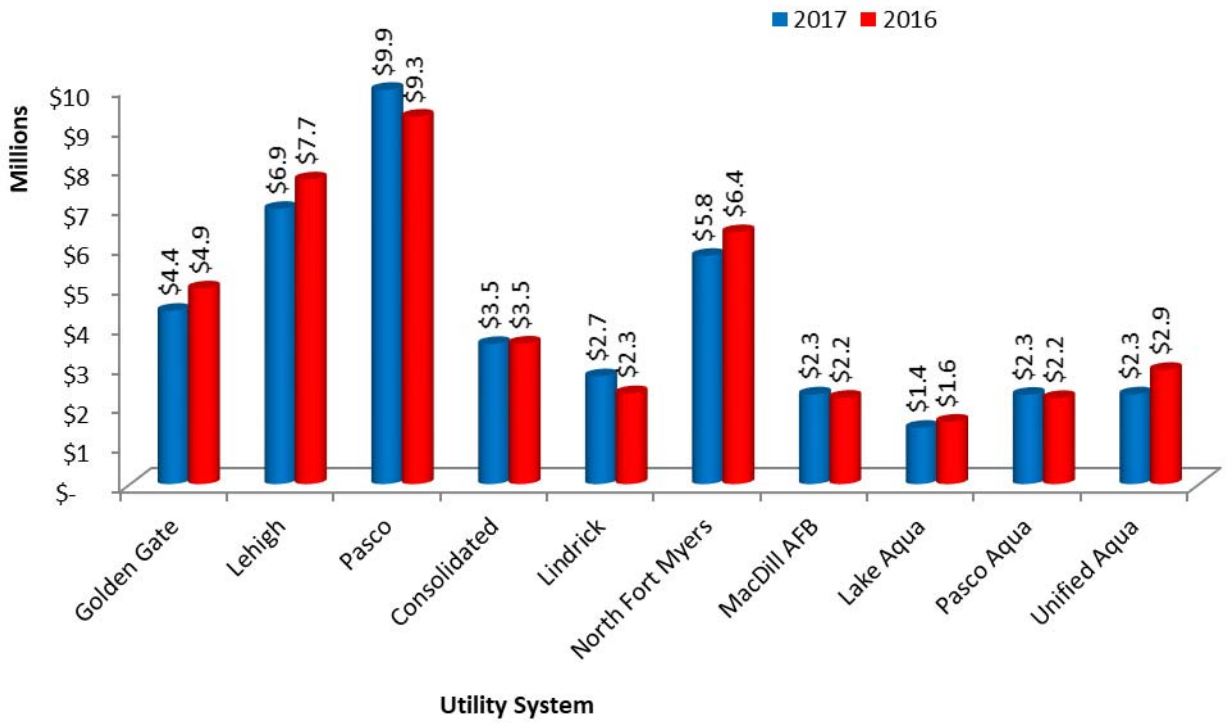
- The Golden Gate Utility System realized an increase in operating expenses of $490,456 or 16.4%. Over $350k of this was related to the storm response and repairs.
- The Lehigh Acres Utility System realized an increase in operating expenses of $739,785 or 11.1%. Nearly $670k of this increase was related to Hurricane Irma. The regular operating expenses increased only 1% because operating and management contract consumer price index increases (approximately 2.5%) were offset by lower office rent and electricity expenses.
- The Pasco Utility System realized an increase in operating expenses of $128,232 or 1.3%. This is well aligned with the contractual increase for the operating and management contracts.
- The Consolidated Utility System realized an increase in operating expenses of $320,877 or 12.8%. This increase was due to new meter installations of $122k (offset by new meter installation fees from new customers), and due to operations contract and purchased water increases ($199k).
- The Lindrick Utility System realized a decrease in operating expenses of $39,488 or -1.8%. This decrease was primarily due to fewer urgent repairs
- The North Fort Myers Utility System realized an increase in operating expenses of $771,847 or 11.7%. The main expense in FY 2017 was over $300k for litigation expenses related to a deep injection well versus reuse water system. In addition, Hurricane Irma resulted in an unexpected $130k of storm-related expense. The remaining increases in expenses were offset with increased related revenues for items like inspecting new sewer laterals for new connections.
- The MacDill AFB Utility System FY 2017 operating expenses were $46,079 lower than FY 2016 expenses (-1.9%). This was mainly related to operating permit/regulatory expenses which are not incurred every year, as many of the permits are for multiple years.
- The Aqua Pasco, Aqua Lake and Aqua Unified Utility Systems operating expenses were $954,940 higher in FY 2017. This is fully attributed to the $1million in extra expenses caused by Hurricane Irma.

Operating Expenses by System for the Year Ending September 30
(excluding depreciation and amortization)



Operating income is the net of operating revenue against operating expenses. Four of the FGUA utilities experienced an increase in operating income in FY 2017, and six of the utilities experienced a decrease. The five systems that suffered most from Hurricane Irma had the greatest decreases in net operating income (Unified Aqua, Lehigh, Golden gate, Lake Aqua, and North Fort Myers). Operating income (excluding the General Fund and depreciation and amortization expense) decreased by $1.4 million or -3.3% from $42.9 million in FY 2016 to $41.5 million in FY 2017. See the chart below for a comparison of FY 2016 to FY 2017 operating income by utility system. The two utility systems with the most significant increases in operating income were the Pasco Utility System ($677,721 or 7.3% increase) and the Lindrick Utility System ($427,934 or 18.7% increase). The Pasco Utility System's operating expenses were kept low through long-term contracts, and the revenues increased thanks to a rate increase and increased consumption. In addition, the Pasco Utility System was one of the least harmed by Hurricane Irma.expenses. The Lindrick Utility System enjoyed lower operating expenses during FY 2017 in combination with higher revenues due to higher consumption, and suffered virtually no damage from Hurricane Irma.

Operating Income by System for the Year Ending September 30
(excluding depreciation and amortization)



CUSTOMERS

The following chart depicts the change in water and wastewater billed customers over the last two years. All residential and most commercial meters were changed from manual to radio frequency read meters during FY 2017 in the Golden Gate, Lehigh Acres, and North Fort Myers utility service areas, which has increased the accuracy of our meter audit. The Lehigh Acres system showed the greatest amount of growth in water and sewer connections, as new housing developments in the Lehigh Acres area were completed this year. All the FGUA systems charge base fees as long as there is a connection to a home that must be maintained, whether the home is occupied or vacant. The Consolidated Systems had the largest number of new connections, just over 1%. The remaining systems continue to experience little to no growth.

	Water Customers				Wastewater Customers			
System	6/30/2017	6/30/2016	Growth	Percent Growth	6/30/2017	6/30/2016	Growth	Percent Growth

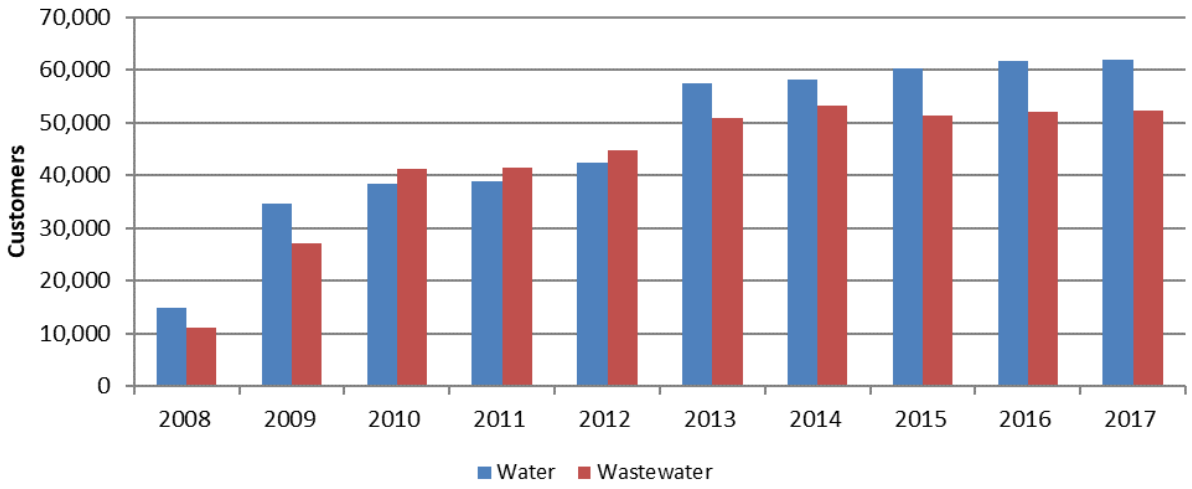
Note:
Reflects active customers on June 30

The following chart shows the change in the number of customers over the past ten years. While the individual utilities have traditionally experienced relatively flat growth in the customer base, acquisitions of new systems and transitioning of exiting systems may be reflected in the changes shown below. The last disposition of any FGUA utility systems was the transition of the Poinciana and Citrus utility systems in 2007. In 2009, the FGUA acquired the Pasco utility systems. In 2010, the FGUA acquired the Consolidated, Lindrick, and North Fort Myers utility systems. In 2013, the FGUA acquired the Lake Aqua, Pasco Aqua, and Unified Aqua utility systems. The number of utility systems and the size of the customer base of each system for a given year affect the upward and downward changes over this ten year period.

Refer to the **Statistical Section** for additional information.

MOST RECENT 10 YEARS OF FGUA CUSTOMERS



REQUESTS FOR INFORMATION

This financial report is designed to provide a general overview of the Florida Governmental Utility Authority's finances for all those with an interest in the government's finances. Questions concerning any of the information provided in this report or requests for additional financial information should be addressed to the FGUA Office of the Chief Financial Officer, 280 Wekiva Springs Road, Suite 2070, Longwood, FL 32779.

FLORIDA GOVERNMENTAL UTILITY AUTHORITY
STATEMENT OF CASH FLOWS
FOR THE YEAR ENDED SEPTEMBER 30, 2017

	Non-System Specific	Golden Gate Utility System	Lehigh Utility System	Barefoot Bay Utility System	Pasco Utility System
Cash flows from operating activities					
Cash received from customers, including customer deposits	$ 150,371	$ 8,061,999	$ 14,624,769	$ -	$ 19,765,755
Cash received from rental activities	-	-	376	-	215,244
Cash payments for contractual and other services	(39,254)	(3,061,076)	(6,808,755)	-	(9,830,840)
Net cash provided by (used in) operating activities	111,117	5,000,923	7,816,390	-	10,150,159
Cash flows from capital and related financing activities					
Proceeds from issuance of bonds and loans	-	-	11,458,531	-	-
Debt issuance and other costs paid on capital debt	-	-	(2,104,078)	-	-
Principal paid on revenue bond and assessment note maturities	-	(1,213,229)	(14,435,000)	(555,000)	(2,910,000)
Interest paid on revenue bonds and assessment note	-	(1,591,934)	(3,168,064)	(508,681)	(7,011,620)
Build America Bond subsidy receipts on revenue bonds	-	-	-	-	2,265,924
Payments to acquire and construct plant property	(23,791)	(3,558,694)	(6,328,658)	-	(1,453,121)
Proceeds from the sale of capital assets	-	-	-	-	-
Payments to acquire intangible right-to-use agreement	-	-	-	-	-
Grants	-	-	-	-	13,214
Impact fees and other capital contributions	-	97,414	673,335	-	20,882
Net cash provided by (used in) capital and related financing activities	(23,791)	(6,266,443)	(13,903,934)	(1,063,681)	(9,074,721)
Cash flows from investing activities					
Proceeds from bond maturities	-	-	-	555,000	-
Sales (purchases) of investments	-	-	-	-	54,239
Interest received	1,550	60,336	104,603	508,681	137,706
Net cash provided by (used in) investing activities	1,550	60,336	104,603	1,063,681	191,945
Net increase (decrease) in cash and cash equivalents	88,876	(1,205,184)	(5,982,941)	-	1,267,383
Cash and cash equivalents, beginning of year	457,120	13,155,345	26,614,226	-	22,828,399
Cash and cash equivalents, end of year	$ 545,996	$ 11,950,161	$ 20,631,285	$ -	$ 24,095,782
Reconciliation of operating income to net cash provided by (used in) operating activities					
Cash flows from operating activities					
Operating income	$ 40,468	$ 2,393,053	$ 2,474,360	$ -	$ 5,895,114
Adjustments to reconcile operating income to net cash provided by operating activities:					
Miscellaneous nonoperating income	-	-	376	-	215,244
Depreciation and amortization expense	12,775	1,977,766	4,468,315	-	4,050,221
Changes in assets and liabilities					
Decrease (Increase) in accounts receivable	-	188,151	180,402	-	(208,351)
Decrease (Increase) in prepaid expenses	(8,597)	9,371	(39,454)	-	10,730
Increase (Decrease) in accounts payable and accrued expenses	66,471	415,448	642,903	-	73,184
Increase (Decrease) in customer deposits payable	-	17,134	89,488	-	114,017
Total adjustments	70,649	2,607,870	5,342,030	-	4,255,045
Net cash provided by (used in) operating activities	$ 111,117	$ 5,000,923	$ 7,816,390	$ -	$ 10,150,159
Supplemental schedule of noncash investing, capital, and financing activities					
Amortization of excess of cost over fair value of acquired assets	$ -	$ 452,324	$ 264,357	$ -	$ 1,835,927
Amortization of deferred loss on refunding	-	21,808	16,220	-	-
Bond discount (premium) amortization	-	(171,656)	(443,267)	-	13,562
Plant property contributed by developers	-	131,242	267,678	-	66,845

The accompanying notes to financial statements are an integral part of this statement.

(1) **Summary of Significant Accounting Policies:**

(a) **Reporting entity**—The Florida Governmental Utility Authority (the "Authority") was formed as a legal entity and public body pursuant to Chapters 125, 166 and 163, Florida Statutes and an Interlocal Agreement dated February 1, 1999 (the "Interlocal Agreement") initially by and between Brevard County, Lee County, Polk County, and Sarasota County (the "Authority Members"), each a local government located in the State of Florida. The Interlocal Agreement was amended and restated on December 1, 2000, by and between Citrus County, Nassau County, Polk County, and Sarasota County. Sarasota County was a member of the Interlocal Agreement, but withdrew effective August 29, 2002, after assuming ownership of the Authority's assets and liabilities related to the Sarasota Utility System. On January 16, 2003, Osceola County was accepted as a member. Osceola County has since terminated its membership and the Poinciana Utility System assets and liabilities were transferred to the Tohopekaliga Water Authority on April 30, 2007. The Citrus Utility System was transitioned to Citrus County on February 15, 2007. On October 15, 2005 Lee County rejoined the Authority subsequent to the purchase of the Lehigh Acres System. The Town of Dundee joined as a member on June 12, 2007 and subsequently withdrew on January 21, 2010. Hendry County joined as a member on February 21, 2008. Pasco County joined as a member on February 27, 2008. DeSoto County joined as a member on January 13, 2009, and terminated its membership on November 12, 2015. The purpose of the Authority is to enable the Authority Members to make the most efficient use of their common power to acquire, own, improve, operate, and maintain water and wastewater facilities. It is not expected that the Authority will have any employees. All services will be provided on a contractual basis.

The Authority has adopted Governmental Accounting Standards Board (GASB) Statement No. 61, *The Financial Reporting Entity: Omnibus*, for the purpose of evaluating its financial statements. Based on the criteria in Statement No. 61, the Authority has determined that there are no other units that meet the criteria for inclusion in the Authority's financial statements.

(b) **Measurement focus, basis of accounting, and financial statement presentation**—The accounting systems of the Authority are organized on the basis of funds, each of which is considered an accounting entity having a self-balancing set of accounts for recording its assets, deferred outflows, liabilities, deferred inflows, net position, revenues, and expenses. Since the Authority is a special purpose government involved solely in the provision of water and wastewater services to its customers on a fee basis, all funds are accounted for in Proprietary Funds.

The focus of proprietary fund measurement is the determination of net income, financial position, and cash flows. The proprietary funds are used to account for operations: (a) that are financed and operated in a manner similar to private business enterprises - where the intent of the governing body is that the costs (expenses, including depreciation) of providing goods or services to the general public on a continuing basis be financed or recovered primarily through user charges; or (b) where the governing body has decided that periodic determination of revenue earned, expenses incurred, and/or net income is appropriate for capital maintenance, public policy, management control, accountability, or other purposes. The Authority operates ten utility systems (Golden Gate, Lehigh Acres, Pasco, Consolidated, Lindrick, North Fort Myers, MacDill AFB, Lake Aqua, Pasco Aqua, Unified Aqua) in ten separate funds. The Authority has one non-system specific fund that handles the administration of the interlocal agreements and also has a fund (Barefoot Bay) that services outstanding bonds from former utility systems the Authority operated years ago. All funds are considered major funds.

The Authority utilizes the accrual basis of accounting in accordance with the GASB Codification.

(1) **Summary of Significant Accounting Policies:** (Continued)

(c) **Cash and cash equivalents**—Cash and cash equivalents consists of cash on hand and on deposit in banks and money market accounts. Investments with a maturity of three months or less when purchased are considered to be cash equivalents.

(d) **Investments**—Investments are carried at fair value.

(e) **Accounts receivable**—The Authority's accounts receivable consists of amounts due from consumers. The Utility Systems perform credit evaluations on their consumers and generally require collateral deposits from them.

(f) **Restricted assets and reserves**—Certain assets are required to be segregated from other assets due to various bond indenture agreements. These assets are legally restricted for specific purposes such as debt service, construction, and renewals and replacements. The remaining excess of restricted assets over liabilities is reflected as restricted net position.

(g) **Property and plant**—Property and plant are recorded at cost less accumulated depreciation, except contributed assets which are recorded at acquisition value on the date of contribution. Expenditures of $5,000 or more are capitalized. Construction period interest cost, net of interest earned on the unexpended proceeds of tax-exempt borrowings, is capitalized as part of the asset cost. Depreciation, on a straight-line basis, is charged over estimated useful lives ranging from 5 to 35 years.

(h) **Intangibles**—The excess cost over fair value of acquired assets is being amortized, on a straight-line basis, over the approximate life of the related assets purchased, ranging from 20 to 30 years. The right-of-use capacity agreement for the Lindrick Utility System has an indefinite life and the one for Unified Aqua Utility System has a 30 year life.

(i) **Bond discounts and premiums**—Bond discounts and premiums are deferred and amortized over the term of the bonds using the effective interest method.

(j) **Revenue recognition**—Operating revenue consists primarily of charges for services, which are billed to customers for water, wastewater, and reclaimed water service. Billings are included in revenue as meters are read on a cycle basis throughout each month. Unbilled revenues are accrued based on estimated consumption of the most recent billing. For the MacDill AFB system, all water and wastewater revenues are earned based on the terms set forth in a formal agreement between the Authority and the Federal government.

(k) **Net position flow assumption**—Sometimes the Authority will fund outlays for a particular purpose from both restricted and unrestricted resources. In order to determine amounts reported as restricted and unrestricted net position, it is the Authority’s policy to consider restricted net position to have been used before unrestricted net position is applied.

(1) **Summary of Significant Accounting Policies:** (Continued)

(l) **Capital grants, contributions, and impact fees**—Impact fees are imposed by the Utility Systems to acquire, construct, equip, or expand the capacity of the water and/or wastewater facilities in order to serve new users of the facilities and new development within the service area of the Utility Systems. Impact fees revenue is recognized when the related connection services are performed. Capital contributions represent contributions of certain water distribution and wastewater collection systems. Such contributions are recognized as revenue in the period they are received. The recoverable portion of system purchase price is earned in the MacDill AFB System based on the terms set forth in the agreement with the Federal government. Capital grants represent funding from state and Federal agencies to support capital asset construction.

(m) **Operating and nonoperating revenues and expenses**—Operating revenues and expenses generally result from providing services and producing and delivering goods in connection with principal ongoing operations. The Authority's principal operating revenues are charges for water and sewer services. Operating expenses include the costs to maintain and repair the water and sewer treatment plants, administrative expenses, and depreciation on capital assets. All revenues and expenses not meeting this definition are reported as nonoperating revenues and expenses.

(n) **Deferred outflows/inflows of resources—**In addition to assets, the statement of financial position will, if required, report a separate section for deferred outflows of resources. This separate financial statement element, *deferred outflows of resources*, represents a consumption of net position that applies to a future period(s) and so will not be recognized as an outflow of resources (expense/expenditure) until then. It is the deferred loss on refunding. A deferred loss on refunding results from the difference in the carrying value of refunded debt and its reacquisition price. This amount is deferred and amortized over the shorter of the life of the refunded or refunding debt.

In addition to liabilities, the statement of financial position will, if required, report a separate section for deferred inflows of resources. This separate financial statement element, *deferred inflows of resources*, represents an acquisition of net position that applies to future period(s) and so will not be recognized as an inflow of resources (revenue) until that time. The Authority has no items that qualify for reporting in this category.

(o) **Use of estimates**—The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, and changes therein, and disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

(p) **Risk management**—The Authority participates in various insurance programs for property and casualty losses. Coverage includes property, general liability, and public officials insurance. Environmental impairment insurance for potential spills is maintained with a third party insurance carrier. Settled claims have not exceeded insurance coverage during the last three fiscal years.

(2) **Purchase and Transition of Utility Systems:**

In recent years, the Authority has periodically engaged in acquiring new utility systems, most recently acquiring the Lake Aqua, Pasco Aqua, and Unified Aqua systems in fiscal year 2013.

No such acquisitions or transitions occurred during the year ended September 30, 2017.

(3) **Sale of Utility Systems:**

Barefoot Bay utility system—Effective February 2, 2000, Barefoot Bay Water and Sewer District (the "District"), a component unit of Brevard County, Florida, acquired all the assets and assumed all operating liabilities of the Barefoot Bay Utility System at net book value. This transaction resulted in a gain of approximately $250,000, equal to the accumulated deficit of the Barefoot Bay Utility System at the sale date. In payment for the Barefoot Bay Utility System, the District issued Barefoot Bay Water and Sewer District Utility Revenue Bonds Series 2000 (the "Series 2000 Bonds") in the amount of $17,135,000. The respective interest rates and maturities of the Series 2000 Bonds are identical to the Florida Governmental Utility Authority Utility System Revenue Bonds (Barefoot Bay Utility System), Series 1999 Bonds issued at the acquisition of the Barefoot Bay Utility System by the Authority and which remain outstanding. The trust estate as defined in the Series 2000 Bonds trust indenture secures the Series 2000 Bonds. This trust estate has replaced the net revenues of the Barefoot Bay Utility System as the pledged revenue source securing the Series 1999 Bonds. The Series 2000 Bonds are included in restricted assets in the combined Statement of Net Position of the Authority.

(4) **Deposits and Investments:**

(a) **Deposits**—At September 30, 2017, the Authority held cash on deposit with various financial institutions. In addition to insurance provided by the Federal Depository Insurance Corporation, deposits are held in banking institutions approved by the State Treasurer of the State of Florida to hold public funds. Under Florida Statutes Chapter 280, Florida Security for Public Deposits Act, the State Treasurer requires all Florida qualified public depositories to deposit with the Treasurer or another banking institution eligible collateral. In the event of failure of a qualified public depository, the remaining public depositories would be responsible for covering any resulting losses. The Authority's deposits at year end are considered insured for custodial credit risk purposes.

(b) **Investments**—The Authority measures and records its investments using fair value measurement guidelines established by GASB Statement No. 72. These guidelines recognize a three-tiered fair value hierarchy, as follows:

Level 1: Quoted prices for identical investments in active markets;

Level 2: Observable inputs other than quoted market prices; and,

Level 3: Unobservable inputs.

At September 30, 2017, the Authority's investments consisted of the following, all of which were valued using Level 2 inputs from the above hierarchy:

Types of Investments	Maturities	Credit Quality (Moody's)	Fair Value
Municipal bonds receivable	13.00	N/A	$ 10,405,000
Municipal bonds	1.79	Aa3	3,338,230
Total investments			$ 13,743,230

(c) **Custodial credit risk**—For an investment, custodial credit is the risk that, in the event of the failure of the counterparty, the Authority will not be able to recover the value of its investments or collateral securities that are in the possession of an outside party. In order to manage the custodial credit risk, the Authority's investment policy specifies certain requirements to pre-qualify financial institutions and brokers/dealers and an annual review of the institutions used.

(4) **Deposits and Investments:** (Continued)

(d) **Credit risk**—Credit risk is the risk that an issuer or other counter party to an investment will not fulfill its obligations. The Authority does have a formal investment policy that limits its investments to high quality investments to control credit risk, which requires diversification of investments, limited investments in securities with higher credit risks, investing in securities with varying maturities, and continuously investing a portion of the portfolio in readily available funds such as local government investment pools or money market funds. In addition, Certificates of deposit and other evidences of deposit at qualified depositories, bankers' acceptances, and commercial paper, rated in the highest tier (e.g., A-I, P-I, F-I or D-1 or higher) by a nationally recognized rating agency. The municipal bonds receivable and money market mutual funds do not have credit quality ratings. The municipal bonds receivable are insured by a financial guaranty insurance policy.

(e) **Interest rate risk—**Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment. The Authority has a formal investment policy that, except for special situations, limits investment maturities to instruments maturing within three years from purchase as a means of managing exposure to fair value losses arising from increasing interest rates. At September 30, 2017, the Plan's municipal bonds had a weighted average duration of 1.79 years.

(d) **Bond issuances—**During the year ended September 30, 2017, the authority entered into the following debt issuances:

Lehigh Acres Utility System Series 2017 Refunding Revenue Bonds—On September 20, 2017, the Authority issued the Series 2017 Utility Refunding Revenue Bonds for the Lehigh Acres Utility System in the amount of $11,265,000 and due October 1, 2040. Interest will compound monthly on a 30/360 basis. Payments on interest are due semi-annually, beginning on April 1, 2018, at rates ranging from 2.000% to 5.000%. Principal payments in varying amounts are due annually on October 1, 2018 through 2040. The Purpose of the Revenue Bonds was to refund the Lehigh Acres Utility System Series 2010 Revenue Bonds. The refunding enabled the Authority to reduce its debt service payments over 20 years by $5,721,270 and to obtain an economic gain (difference between the present values of the debt service payments on the old and new debt) of $1,560,103.

(8) **Commitments and Contingencies:**

(a) **U.S. Water/Wade Trim, LLC**—Contracted to perform water treatment, water distribution, wastewater treatment, wastewater disposal and control, and other related services for all utility systems of the Authority. With the exception of Golden Gate and Lehigh Acres, both of which had contract effective dates of October 1, 2011, the contract terms started on the effective date of the acquisitions of each system, and expire on varying dates from September 30, 2018, to September 30, 2020.

U.S. Water receives an annual fixed fee for services provided to the systems of $23,905,395, paid in monthly installments. Fees in future years are adjusted as defined in the Operations and Billing Contract. The Operations and Billing Contract also provides for additional payments to U.S. Water for renewals and replacements and for capital improvements. Such additional payments are to be at U.S. Water's cost plus a specified profit percentage. Total amounts paid to U.S. Water for the year ended September 30, 2017 for all services were $37,031,220. At September 30, 2017, amounts payable to U.S. Water totaled $1,444,084.

(b) **Government Services Group, Inc.**—In order to execute the powers of the Authority pursuant to the Interlocal Agreement and the responsibilities of the Authority, the Authority retained Government Services Group, Inc. (GSG), a private contractor, for the overall management of the Authority. The Management Services Agreement between the Authority and GSG defines the general functions GSG will carry out and expires September 30, 2020, with the exception of the agreement defining functions relating to the MacDill AFB System, which expires September 30, 2021. The Authority has the option to extend the term of the Management Services Agreement. GSG receives an annual base fixed fee for general administrative services provided to the Authority of $3,618,877, as well as an annual based fixed fee for capital improvement program administrative fees of $1,236,290. Additional payments are made for other services approved by the Authority's Board of Directors. Total amounts paid to GSG for the year ended September 30, 2017 were $6,715,930. At September 30, 2017, amounts payable to GSG totaled $473,600.

(c) **North Fort Myers System contingent payments**—As part of the purchase agreement for the North Fort Myers System, the Authority agreed to pay the seller 50% of impact fees collected for a period of 20 years from the closing date in June 2010 or until $25 million has been paid to the seller, whichever occurs first. As of September 30, 2017, $981,575 has been incurred in accordance with this agreement, $413,225 of which was incurred during the year ended September 30, 2017. The Authority also entered into a settlement with a developer of a specific subdivision whereby the developer is entitled to $635 per lot (less a 2.0% handling fee) which impact fees are paid. Total amounts incurred under this agreement at September 30, 2017, were $72,044, none which was incurred during the year ended September 30, 2017.

(d) **Contracts**—Commitments on outstanding contracts for improvements and maintenance of the Utility Systems totaled $12,395,393 at September 30, 2017.

(e) **Other pending litigation**—The Utility Systems are contingently liable with respect to regulatory inquiries and other claims incidental to the ordinary course of its operations. In the opinion of management, based on the advice of legal counsel, the ultimate disposition of these regulatory inquiries and claims will not have a material adverse effect on the financial position or results of operations of the Utility Systems.

(9) **Related Party Transactions:**

Prior to December 31, 2001, Government Services Group, Inc. (GSG) was partially owned by Nabors, Giblin & Nickerson, P.A., (NGN) which is serving as Bond Counsel with respect to the Authority's bond issues and Special Authority Counsel of each of the Utility Systems. This direct interest ended through a buyout of NGN shares by GSG.

(10) **Subsequent Events:**

Pursuant to the Interlocal Agreement dated as of March 1, 1999, Collier County Water-Sewer District (CCWSD) has the right to acquire all the assets, liabilities, obligations, and responsibilities relating to the Golden Gate Utility System. On November 14, 2017, Collier County's Board of County Commissioners, acting ex-officio as the governing board of the CCWSD voted affirmatively to exercise this right. The CCWSD and the Authority have been planning and coordinating the eventual transition of the Golden Gate Utility System. Effective March 1, 2018, the Authority's obligation and responsibility to act or serve as a provider of water or wastewater services as owner of the Golden Gate Utility System was terminated and the CCWSD assumed all the assets, liabilities, obligations, and responsibilities.

The Barefoot Bay Utility System series 1999 bonds were legally defeased on February 6, 2018. In Fiscal Year 2018 the Barefoot Bay Utility System will no longer be reported by the Authority.

On December 18, 2017, the Authority's Board of Directors authorized the acquisition of certain water and wastewater assets owned by the City of Dunnellon located in Marion County, Florida. The Board also authorized a Purchase and Sales Agreement for an amount not to exceed $12,198,091, with a closing date anticipated to be by the end of Fiscal Year 2018. The Authority expects to obtain the necessary financing with the USDA. The acquired system would be place into a separate enterprise fund: Dunnellon Utility System for financial reporting purposes.

STATISTICAL SECTION

This part of the Florida Governmental Utility Authority's comprehensive annual financial report presents detailed information as a context for understanding what the information in the financial statements, note disclosures, and required supplementary information says about the government's overall financial health. In some instances, data is not available for all years. In future financial statements, we will add the current year plus continue to report on the years reflected in these schedules until a full ten years of data is presented.

Contents **Page**

Financial Trends

These schedules contain trend information to help the reader understand how the government's financial performance and well-being have changed over time

Net Position by Component 70
Changes in Net Position 71
Summary of Ten Largest Single Water Users 72

Debt Capacity

These schedules present information to help the reader assess the affordability of the government's current levels of outstanding debt and the government's ability to issue additional debt in the future.

Ratios of Outstanding Debt by Fund Type 73

Notes:
(1) Water and wastewater revenue is net of bad debt.
(2) Depreciation and amortization for system assets and goodwill.
(3) The Loss on sale of system amount under the Expenses section represents the net asset value of those systems that transitioned from FGUA ownship.
(4) During fiscal year 2007 the Poinciana and Citrus Utility systems were tranfered to their local governmental authorities.

Florida Governmental Utility Authority
Ratios of Outstanding Debt by Type
Last Ten Fiscal Years
(amounts expressed in whole dollars)

Fiscal Year	Business-Type Activities			Total Primary Government	Percentage of Personal Income	Per Utility Customer
	Water & Wastewater Revenue Bonds (1)	Other Debt (2)	Capital Leases			
2008	$ 143,294,162	$ -	$ -	$ 143,294,162	na	$ 4,865
2009	252,014,267	-	-	252,014,267	na	4,295
2010	318,184,200	9,564,794	-	327,748,994	na	4,117
2011	343,764,200	3,003,105	-	346,767,305	na	4,316
2012	343,625,000	7,644,540	-	351,269,540	na	4,030
2013	435,550,000	7,282,125	1,586,568	444,418,693	na	4,097
2014	397,170,000	6,964,979	1,427,343	405,562,322	na	3,700
2015	410,030,000	6,792,943	1,264,498	418,087,441	na	3,742
2016	380,760,000	21,858,940	1,097,951	403,716,891	na	3,546
2017	370,315,000	21,670,088	927,617	392,912,705	na	3,433

Notes: (1) This amount excludes the Barefoot Bay bonds as the FGUA acts as a pass-through agent only. The Barefoot Bay Utility was sold to Brevard County in 2000, and the bonds are secured by Brevard County Series 2000 bonds.

(2) Other Debt includes State Revolving Loan Fund (SRF) debt, the SunTrust Energy Project debt, and Seller-Financed Notes. The MacDill AFB Seller-Financed note is excluded because it is fully-subsidized, the note is not secured by revenues, and because the AFB is considered one customer, which would skew the "per utility customer" ratio. See Note 7 for MacDill debt balance.

+ Wastewater treatment provided by Hillsborough County, Florida
++Wastewater treatment provided by City of New Port Richey (0.700 MGD)
+++Wastewater treatment provided by Pasco county, Florida
(1) The Aloha Gardens and Seven Springs service areas are combined for Financial reporting purposes and called the Pasco Utility Systems.
(2) The Consolidated System is comprised of thirteen small service areas.
(3) Flows reported for Lake Fairways only.
(4) The North Fort Myers wastewater treatment is comprised of 2 treatment plants.
(5) Flows reported for Linda Lakes WWTP only.

INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

To the Board of Directors,
Florida Governmental Utility Authority:

We have audited, in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in the *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of the business-type activities and each major fund of Florida Governmental Utility Authority (the Authority) as of and for the year ended September 30, 2017, and the related notes to the financial statements, which collectively comprise the Authority's basic financial statements, and have issued our report thereon dated March 12, 2018.

Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered the Authority's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the Authority's internal control. Accordingly, we do not express an opinion on the effectiveness of the Authority's internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct misstatements on a timely basis. A *material weakness* is a deficiency, or combination of deficiencies, in internal control such that there is a reasonable possibility that a material misstatement of the Authority's financial statements will not be prevented, or detected and corrected on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over financial reporting was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over financial reporting that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control over financial reporting that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the Authority's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit and, accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.
